OVERVIEW

Designed for demanding virtualization and database workloads, the UCS B480 M5 combines a large memory footprint with four-socket scalability, leveraging the 2nd Generation Intel® Xeon® Scalable Processors, higher density 256G DDR4 DIMMs, new second-generation Intel® Xeon® Scalable processors, and the new Intel® Optane DC Persistent Memory. Additionally, these B480 M5 servers offer up to 12 terabytes (TB) of DDR4 memory or 18 TB using 24x256G DDR4 DIMMs and 24x512G Intel® Optane DC Persistent Memory; four SAS, SATA, and NVMe drives; M.2 storage; up to four GPUs and 160 Gigabit Ethernet connectivity for I/O throughput, all leading to exceptional performance, flexibility, and I/O throughput to run your most demanding applications. Up to four UCS B480 M5 Blade Servers can be installed in the UCS 5108 Blade Server Chassis.

The Cisco B480 M5 includes support for the following:

- 2nd Generation Intel® Xeon® Scalable Processors.
- DDR4-2933MHz memory DIMMs.
- 128 GB, 256 GB, and 512 GB Intel® Optane™ Persistent Memory (PMem).
- Up to 18 TB of memory is available if the memory slots are populated as follows:
 - 24 x 256 GB DDR4 DIMMs
 - 24 x 512 GB PMem

The UCS B480 M5 Blade Server is centrally managed using Cisco UCS Manager. Cisco UCSM provides a single management interface for all hardware and software components of a UCS domain. Cisco UCSM manages up to 160 servers, using [Single Connect Technology](#) to consolidate network, storage, and management traffic. With [Cisco UCS Central](#), management can be extended globally to 'of servers in multiple domains.

Notes

1. For information about the KVM local I/O cable that plugs into the console connector (a cable is included with every Cisco UCS 5108 blade server chassis accessory kit), see [CHOOSE LOCAL KVM I/O CABLE \(OPTIONAL\) on page 53](#).

BASE SERVER STANDARD CAPABILITIES and FEATURES

Table 1 lists the capabilities and features of the base server. Details about how to configure the server for a particular feature or capability (for example, number of processors, disk drives, or amount of memory) are provided in [CONFIGURING the SERVER on page 6](#).

NOTE: The B480 M5 blade server requires UCS Manager (UCSM) to operate as part of the UCS system.

- The B480 M5 with the Intel® Xeon® Scalable processor family of CPUs requires UCSM 3.2(2) or later release, and with the 2nd Generation Intel Scalable Processors, UCSM 4.0(4b) is required.

CONFIGURING the SERVER

Follow these steps to configure the Cisco UCS B480 M5 Blade Server:

- *STEP 1 CHOOSE SERVER SKU, page 7*
- *STEP 2 CHOOSE CPU(S), page 8*
- *STEP 3 CHOOSE MEMORY, page 12*
- *STEP 4 CHOOSE OPTIONAL FRONT MEZZANINE: Storage Controller or GPU, page 22*
- *STEP 5 CHOOSE HARD DISK DRIVES or SOLID-STATE DRIVES (OPTIONAL), page 25*
- *STEP 6 CHOOSE REAR MEZZANINE CARDS, page 31*
- *STEP 7 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL), page 36*
- *STEP 8 CHOOSE OPTIONAL SECURE DIGITAL CARDS or M.2 DEVICES, page 37*
- *STEP 9 ORDER INTERNAL USB 3.0 DRIVE (OPTIONAL), page 40*
- *STEP 10 CHOOSE OPERATING SYSTEM AND VALUE-ADDED SOFTWARE, page 41*
- *STEP 11 CHOOSE OPERATING SYSTEM MEDIA KIT (OPTIONAL), page 45*
- *STEP 12 CHOOSE SERVICE and SUPPORT LEVEL, page 46*
- *STEP 13 CHOOSE LOCAL KVM I/O CABLE (OPTIONAL), page 53*

STEP 1 CHOOSE SERVER SKU

Verify the product ID (PID) of the server as shown in [Table 2](#).

Table 2 PID of the Base UCS B480 M5 Blade Server

Product ID (PID)	Description
UCSB-B480-M5	UCS B480 M5 Blade Server with no CPU, memory, HDD, SSD, or adapter cards
UCSB-B480-M5-U	UCS B480 M5 Blade Server without CPU, memory, drive bays, HDD, VIC adapter, or mezzanine adapters (UPG) (ordered standalone)
UCSB-B480-M5-CH	DIST1: UCS B480 M5 Blade Server without CPU, memory, drive bays, HDD, VIC adapter, or mezzanine adapters

The base Cisco UCS B480 M5 blade server does not include the following components. They must be selected during product ordering:

- CPUs
- DIMM memory
- Intel® Optane™ Persistent Memory
- Cisco FlexStorage RAID controller with drive bays, FlexStorage Passthrough, or blank (for no local drive support)
- Disk drives
- Cisco adapters (such as the VIC 1340, VIC 1380, VIC 1440, VIC 1480 and Port Expander)
- Cisco UCS Storage Accelerators or GPUs

NOTE: Use the steps on the following pages to order servers with the configurable components that you want configured in your servers.

STEP 2 CHOOSE CPU(S)

- 2nd Generation Intel® Xeon® scalable processor family CPUs.
- Intel C621 series chipset
- Up to 28 cores per processor, for a total of up to 112 cores per server
- If you choose any CPU that dissipates greater than 165 W, you cannot choose GPU for the front connector due to heat concerns.

Select CPUs

The available CPUs are listed in [Table 3](#).

Notes

1. UPI = Ultra Path Interconnect.
2. If higher or lower speed DIMMs are selected than what is shown in the table for a given CPU, the DIMMs will be clocked at the lowest common denominator of CPU clock and DIMM clock.
3. System performance may be reduced for greater than 165 W total dissipation power (TDP) processors if operating with a fan fault or above 32°C (89.6°F) system air inlet temperature, depending upon the application load. No front GPU is allowed when using CPUs that dissipate greater than 165 W.
4. For details on memory support for processor classes and CPU modes, see [Memory Support for CPU Classes and CPU Modes on page 59](#).

CAUTION: In [Table 4](#), systems configured with the processors shown must adhere to the ambient inlet temperature thresholds specified. If not, a fan fault or executing workloads with extensive use of heavy instructions sets such as Intel® Advanced Vector Extensions 512 (Intel® AVX-512) may assert thermal and/or performance faults with an associated event recorded in the System Event Log (SEL). [Table 4](#) lists ambient temperature limitations below 35° C (95° F) and configuration restrictions to ensure proper cooling and avoid excessive processor throttling, which may impact system performance.

Supported Configurations

(1) Two-CPU Configuration

- Choose two identical CPUs from any one of the rows of [Table 3 on page 8](#). CPU1 and CPU2 will be populated.

(2) Four-CPU Configuration

- Choose four identical CPUs from any one of the rows of [Table 3 on page 8](#). CPU1, CPU2, CPU3, and CPU4 will be populated.

Notes

- For 2-CPU systems, 24 DIMM slots are functional. When 2 CPUs are installed, rear mezzanine connectors 1 (slot 2) and 2 (slot 3) are not active.
- For 2-CPU systems, only 24 DIMM slots are functional (channels A - F for CPU1 and G - N for CPU2).
- See [Table 10 on page 24](#) for supported adapter combinations in 2-CPU systems.
- For 4-CPU systems, all 48 DIMM slots are functional (channels A - F for CPU1, G - M for CPU2, N - T for CPU3, and U - Z for CPU4).

NOTE: See [CHOOSE MEMORY on page 12](#) for details on the compatibility of CPUs and DIMM speeds.

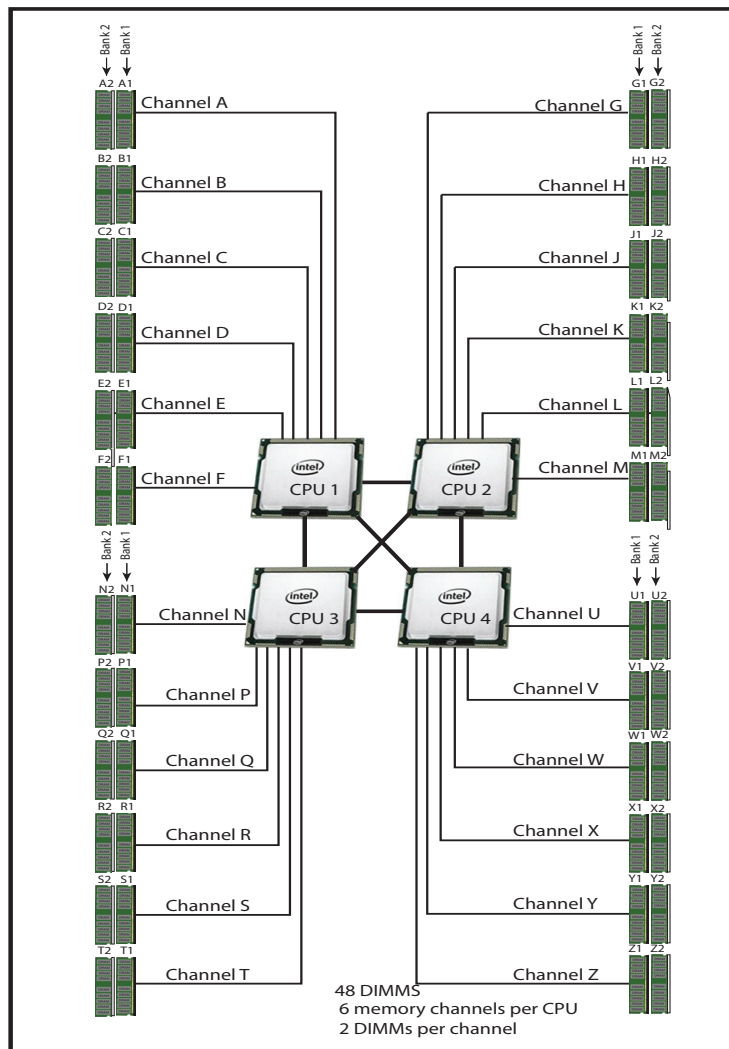

STEP 3 CHOOSE MEMORY

The standard memory features are:

- Clock speed: Up to 2933 MHz; See available CPUs and their associated DDR4 DIMM maximum clock support in [Table 3](#).
- Rank per DIMM: 1, 2, 4, or 8
- Operational voltage: 1.2 V
- Registered ECC DDR4 DIMMs (RDIMMs), Load-reduced DIMMs (LRDIMMs), or Intel® Optane™ Persistent Memory Modules (PMem)

Memory is organized with six memory channels per CPU, with up to two DIMMs per channel, as shown in [Figure 3](#).

Figure 3 B480 M5 Memory Organization

Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in [Table 5](#).

NOTE: When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

Notes

1. UCS-ML-256G8RT-H is 3DS DIMM and can not be mixed with non-3DS DIMMs
2. Cisco announced the End-of-sale of the DDR4-2933 Memory DIMM products: [EOL14611](#) lists the product part numbers affected by this announcement. [Table 6](#) describes the replacement Memory DIMM product Part Numbers.
3. DDR4-3200MHz replacement part numbers will operate at the maximum speed of the Intel 2nd generation Xeon Scalable processor memory interface, ranging from 2133 MHz to 2933 MHz.

[Table 6](#) lists the EOL Memory DIMM product part numbers and their replacement PIDs.

NOTE: (1) Cisco doesn't support a Load Reduce DIMM (LRDIMM) 64GB Memory PID as a replacement PID of existing UCS-ML-x64G4RT-H and recommends migrating to the Registered DIMM (RDIMM) instead, delivering the best balance in performance and price.

DIMM Memory Mirroring

When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two adjacent channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

CPU/Memory Configuration With Memory Mirroring

Select from 4, 6, 8, or 12 DIMMs per CPU (DIMMs for all four CPUs must be configured identically). In addition, the memory mirroring option (N01-MMIRROR) as shown in [Table 5 on page 13](#) must be selected.

The DIMMs will be placed by the factory as shown in the following tables.

#DIMMs	CPU 1 DIMM Placement in Channels (for identical ranked DIMMs) CPU 1	CPU 2 DIMM Placement in Channels (for identical ranked DIMMs) CPU 2
8	(A1,B1); (D1,E1)	(G1, H1); (K1, L1)
12	(A1, B1, C1); (D1, E1, F1)	(G1, H1, J1); (K1, L1, M1)

NOTE: System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

Normal CPU/Memory Configuration (no memory mirroring)

Select from 4, 6, 8, or 12 DIMMs per CPU (DIMMs for all four CPUs must be configured identically). The DIMMs will be placed by the factory as shown in the following tables.

#DIMMs	CPU 1 DIMM Placement in Channels (for identically ranked DIMMs)

System Speeds

Memory will operate at the maximum speed of the Intel Xeon Scalable processor memory controller, ranging from 2133 MHz to 2933 MHz for M5 servers. Check CPU specifications for supported speeds.

Memory Configurations and Modes

DIMM Guidelines

- System speed is dependent on the CPU DIMM speed support. Refer to [Table 5 on page 13](#) for DIMM Speeds
- The B480 M5 server supports four different memory reliability, availability, and serviceability (RAS) modes:
 - Independent Channel Mode
 - Mirrored Channel Mode
 - Lockstep Channel Mode
 - Rank Sparing Mode

NOTE: Mixing of Non-Mirrored and Mirrored mode is not allowed.

- 3DS and non-3DS DIMMs cannot be mixed.
- Single-rank DIMMs can be mixed with dual-rank DIMMs in the same channel
- For best performance, observe the following:
 - DIMMs with different timing parameters can be installed on different slots within the same channel, but only timings that support the slowest DIMM will be applied to all. As a consequence, faster DIMMs will be operated at timings supported by the slowest DIMM populated.
 - When one DIMM is used, it must be populated in DIMM slot 1 (farthest away from the CPU) of a given channel.
 - When single or dual rank DIMMs are populated for 2DPC, always populate the higher number rank DIMM first (starting from the farthest slot). For a 2DPC example, first populate with dual rank DIMMs in the DIMM slot 1. Then single-rank DIMMs in the DIMM 2 slot.
- DIMMs for all four CPUs must always be configured identically.

- Cisco memory from previous generation servers (DDR3 and DDR4) is not compatible with UCS B480 M5 Blade.

NOTE: System performance is optimized when the DIMM type and quantity are equal for both CPUs, and when all channels are filled equally across the CPUs in the server.

- Memory can be configured in any number of DIMMs as pairs, though for optimal performance, refer to the B480 Memory Guide at Cisco.com.

PMem Guidelines

- PMem require second generation Intel Xeon Scalable Family processors. First generation Xeon Scalable processors do not support PMem.
- All installed PMem must be the same size. Mixing PMem of different capacities is not supported.
- The use of 1Rx8 DIMMs with PMem is not supported.
- PMem and DIMMs must be populated as shown in [Table 7](#) (6 DIMMs per CPU with 2, 4, or 6 PMem per CPU, as shown).

- Either two or four CPUs may be installed when using PMem.
- For Memory Mode, install a minimum 2 PMem and 6 DIMMs per CPU
- For App Direct Mode, install a minimum 2 PMem and 6 DIMMs per CPU
- When either Memory Mode or Mixed Mode is used, the ratio of DIMM capacity to PMem capacity per CPU must be between 1:16 and 1:2, and the recommended ratio is 1:4 for the best performance. For example, 6x 16GB DIMMs + 2x 256GB PMem is a ratio of 1:5.33 (96GB:512GB). In Mixed Mode, the ratio is between memory and only the volatile portion of the PMem. This ratio requirement does not apply to App Direct mode. See [Table 8](#) for PMem memory modes.

Table 8 Intel® Optane™ Persistent Memory Modes

Intel® Optane Persistent Memory Modes	
App Direct Mode:	PMem operates as a solid-state disk storage device. Data is saved and is non-volatile. Both PMem and DIMM capacity counts towards CPU tiering (both PMem and DIMM capacities count towards the CPU capacity limit)
Memory Mode: ¹	PMem operates as a 100% memory module. Data is volatile and DRAM acts as a cache for PMem. Only PMem capacity counts towards CPU tiering (only the PMem capacity counts towards the CPU capacity limit). This is the factory default mode.
Mix Mode:	DRAM as cache. Only PMem capacity counts towards CPU tiering (only the PMem capacity counts towards the CPU capacity limit).

Notes

1. For Memory Mode, the Intel-recommended DIMM to PMem capacity ratio in the same CPU socket is from 1:2 to 1:16.

- For each memory channel with both a PMem and a DIMM installed, the PMem is installed in channel slot 2 (closest) and the DIMM is installed in channel slot 1.
- To maximize performance, balance all memory channels
- In configurations with PMem installed, memory mirroring is supported, with two restrictions:

- Mirroring is only enabled on the DIMMs installed in the server; the PMem themselves do not support mirroring.
- Only App Direct mode is supported. Memory mirroring cannot be enabled when PMem are in Memory Mode or Mixed Mode.
- Memory sparing is not supported with PMem installed

For detailed Intel PMem configurations, refer to the following link:

[Cisco UCS B480 M5 Server Installation Guide](#)

For detailed DIMM/PMem informations, refer to

[Cisco UCS B480 M5 Memory Guide](#)

STEP 4 CHOOSE OPTIONAL FRONT MEZZANINE: Storage Controller or GPU

The UCS B480 M5 supports two front mezzanine slots. The front mezzanine slots can accommodate a storage controller with drive bays, NVMe Passthrough, or GPU. Refer to [Table 9](#) for available front mezzanine cards and [Table 10](#) for supported configurations.

Table 9 Front Mezzanine Cards

Product ID (PID)	PID Description
Storage Controller^{1,2,3}	
UCSB-MRAID12G ^{1,4}	Cisco FlexStorage 12G SAS RAID controller with drive bays
UCSB-MRAID12G-HE ^{1,5}	Cisco FlexStorage 12G SAS RAID controller with 2 GB flash-backed write cache and drive bays
UCSB-LSTOR-PT ^{1,2}	Cisco FlexStorage Passthrough module w/drive bays
UCSB-LSTOR-BK ⁶	Cisco FlexStorage blanking panel w/o controller, w/o drive bays
Front GPU	
UCSB-GPU-P6-F ⁷	NVIDIA GRID P6 Front Mezzanine

Notes

1. To support a minimum of two hard disk drives (HDD) or solid-state drives (SSD), a Cisco FlexStorage 12G SAS RAID controller or Cisco FlexStorage 12G SAS RAID controller with 2 GB flash-backed write cache with drive bays is required. If support for four HDD or SSD drives is required, select a Cisco FlexStorage 12G SAS RAID controller and a Cisco FlexStorage Passthrough module.
2. To support a minimum of two NVMe drives, a Cisco FlexStorage Passthrough module with drive bays is required. To support four NVMe drives, select two Cisco FlexStorage Passthrough modules.
3. The two RAID cards and Passthrough are three different cards and cannot be upgraded or downgraded.
4. The Cisco FlexStorage 12G SAS RAID Controller is based on the LSI 3108 ROC and runs the iMegaRAID software stack. It provides 12 Gbps RAID functionality for SAS/SATA SSD/HDD and has RAID 0, 1, and JBOD support. If supercapacitor needs to be replaced, it can be done so by ordering UCSB-MRAID-SC=. See Installation Document for instructions.
5. The Cisco FlexStorage 12G SAS RAID controller with 2 GB Flash-backed write cache is based on the LSI 3108 ROC and runs the LSI MegaRAID Software Stack. It provides 12 Gbps RAID Functionality for SAS/SATA HDD/SSD and has RAID 0, 1, 5 and 6 support.
The flash-backed write cache provides RAID controller cache protection using NAND flash memory and a supercapacitor. In the event of a power or server failure, cached data is automatically transferred from the RAID controller DRAM write cache to flash. Once power is restored, the data in the NAND flash is copied back into the DRAM write cache until it can be flushed to the disk drives.
6. For servers that do not need local storage, and where no storage controllers are included, storage blanking panels are auto-populated as a part of configuration rules. To ensure proper airflow drive blanks must be installed when no drive bays and when GPUs are installed.
7. For GPU P6, maximum cards per node supported is four.

See [Figure 4 on page 23](#) for a top view of the B480 M5 server with and without the Cisco FlexStorage SAS RAID controller and drive bays. See [Figure 5 on page 23](#) for a front view of these configurations. When no drive bays are installed, blanking panels must be installed.

Notes

- Any empty drive bays must be fitted with blanking panels to maintain proper cooling airflow.

NOTE: For supported rear mezzanine configurations, see [STEP 6 CHOOSE REAR MEZZANINE CARDS, page 31](#).

STEP 5 CHOOSE HARD DISK DRIVES or SOLID-STATE DRIVES (OPTIONAL)

The UCS B480 M5 can be ordered with or without drives. If you ordered one of the RAID controller with drive bay options in [CHOOSE OPTIONAL FRONT MEZZANINE: Storage Controller or GPU on page 22](#) (UCSB-MRAID12G or UCSB-MRAID12G-HE for drive bays one and two, and optionally UCSB-LSTOR-PT for drive bays three and four), you can order drives listed in this section. The B480 M5 provides up to four hot plug 2.5" SFF drive bays.

Choose Drives

The drives supported on the UCS B480 M5 are listed in [Table 11](#).

NOTE: Cisco uses solid state drives (SSDs) from a number of vendors. All solid state drives (SSDs) are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives (SSDs) that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.					

Notes

1. HDDs and SSDs require either of the following storage controllers in the front mezzanine slot
UCSB-MRAID12G
UCSB-MRAID12G-HE
2. For 4K native (4Kn) drives:
VMWare ESXi 6.0 does not support 4Kn Drives. 4Kn drive support with VMWare is available in release 6.7 and later.
4K native drives require UEFI Boot
3. NVMe drives require the following storage controller in the front mezzanine slot: UCSB-LSTOR-PT.
4. If HDDs or SSDs are going to be in a RAID group, two identical drives are required.
5. If HDD or SSD are in JBOD Mode, drives can be different.

Supported Configurations

- Select up to 4 of the drives listed in [Table 11](#). Selection is dependent on the number of drive bays selected in [CHOOSE OPTIONAL FRONT MEZZANINE: Storage Controller or GPU on page 22](#).

Notes

- When creating a RAID volume, mixing different capacity drives causes the system to use the lowest-capacity drive.
- Mixing of drive types is supported, but performance may be impacted.
- Multiple RAID volumes are supported. RAID volumes should use the same media type.

Intel® Virtual RAID on CPU (Intel® VROC)

The server supports Intel® Virtual RAID on CPU (Intel® VROC). VROC is an enterprise RAID solution used with Intel NVMe SSDs (see [Table 11](#) for supported Intel NVMe SSDs). The Intel® Volume Management Device (Intel® VMD) is a controller integrated into the CPU PCIe root complex. Intel® VMD NVMe SSDs are connected to the CPU, which allows the full performance potential of fast Intel® Optane™ SSDs to be realized. Intel® VROC, when implemented, replaces traditional hardware RAID host bus adapter (HBA) cards placed between the drives and the CPU.

NOTE:

- Intel® VROC is only supported with Intel drives
 - Intel® VROC enablement key factory pre-provisioned to BIOS - no additional licensing required.
-

VROC has the following features:

- Small Form Factor (SFF) drive support (only)
- No battery backup (BBU) or external SuperCap needed
- Software-based solution utilizing Intel SFF NVMe direct connected to Intel CPU
- RAID 0/1/5/10 support
- Windows, Linux, VMware OS support.
- Host Tools- Windows GUI/CLI, Linux CLI.
- UEFI Support- HII Utility, OBSE.
- Intel VROC NVMe operates in UEFI mode only

See the [instructions on setting up and managing VROC for Intel NVMe SSDs](#) for more information.

STEP 6 CHOOSE REAR MEZZANINE CARDS

NOTE: The mezzanine cards listed in this section are installed in the three rear mezzanine connectors.

- Mezzanine slot 1 the rear mLOM connector
- Mezzanine slot 2 is rear mezzanine connector 1
- Mezzanine slot 2 is rear mezzanine connector 2

See [System Board on page 54](#) for the locations of these connectors.

The mezzanine card offerings are:

■ Cisco Virtual Interface Cards (VICs)

Cisco has developed 1300 and 1400 series Virtual Interface Cards (VICs) to provide flexibility to create multiple NIC and HBA devices. The VIC features are listed here:

- 1300 and 1400 Series VICs include enhancements including network overlay offload support for NVGRE and VXLAN, and RoCE services. 1300 Series VICs support PCIe Gen 3.0 for greater bandwidth.
- Two Converged Network Adapter (CNA) ports, supporting both Ethernet and FCoE.
- Delivers up to 80 Gbps total I/O throughput to the server.
- VICs support either a maximum of dual 4x10Gbps Unified I/O ports or 2x40 (native) Gbps Unified I/O ports.
- Supports up to 256 fully functional unique and independent PCIe adapters and interfaces.
- Provides virtual machine visibility from the physical network and a consistent network operations model for physical and virtual servers.
- Supports customer requirements for a wide range of operating systems and hypervisors.

For additional capabilities please refer to the following VIC data sheets link:

<https://www.cisco.com/c/en/us/support/servers-unified-computing/ucs-virtual-interface-card/tsd-products-support-series-home.html?dtid=osscdc000283>

■ Cisco UCS Storage Accelerator

Cisco UCS Storage Accelerators are designed specifically for the Cisco UCS B-series M5 blade servers and integrate seamlessly to allow improvement in performance and relief of I/O bottlenecks.

■ GPUs

NVIDIA GPUs are designed specifically for the Cisco UCS B Series M5 blade servers and provide outstanding processing power to offload the CPUs.

Table 12 shows the supported mezzanine cards.

To help ensure that your operating system is compatible with the cards you have selected, please check the Hardware Compatibility List at this link:

http://www.cisco.com/en/US/products/ps10477/prod_technical_reference_list.html

Choose a Rear Mezzanine Adapter

The supported rear mezzanine adapters in the UCS B480 M5 are listed in **Table 12**.

GPUs		
UCSB-GPU-P6-R ³	NVIDIA GRID P6 Rear Mezzanine	Rear Mezzanine

Notes

1. The VIC 1440/1480 are supported with the 6200/6300/6400/6536 Series Fabric Interconnects.
2. The Port Expander (only VIC 1440) is supported with the 2408XP Fabric Extender from 4.1(2) release and later.
3. For GPU P6, maximum cards per node supported is four.

Supported Configurations

[Table 13](#) and [Table 14 on page 34](#) show the supported adapter combinations. The configuration rules are summarized as follows:

- You must select at least one VIC.
- Mezzanine slot 1 (MLOM) is dedicated for the VIC 1340 or 1440 only. No other mezzanine card can be placed in mezzanine slot 1.
- The Port Expander requires an mLOM card and can only be placed in mezzanine slot 2.
- You can select up to two Storage Acceleration mezzanine cards.
- You cannot mix VIC 1440 mezzanine cards with 1380 mezzanine cards or VIC 1340 cards with 1480 cards.

Select a mezzanine card combination according to the following tables.

NOTE: CPU1 controls mezzanine slot 1 (mLOM), CPU 3 controls mezzanine slot 2, and CPU 4 controls mezzanine slot 3.

2. Rear mezzanine connector 1 (see [System Board on page 54](#))
3. Rear mezzanine connector 2 (see [System Board on page 54](#))
4. This is two 2x10Gbps port-channelled.
5. FI-6454 and/or VIC 1400 requires UCSM 4.0(1) or greater.
6. The Port Expander is enabled by a passthrough and does not require CPU 3 to be installed.
7. This is a dual native 40G interface.
8. When operating in 4x10Gbps mode, bandwidth drops to 40 Gbps.
9. This is two 4x10Gbps port-channelled.
10. The Cisco UCS 6536 Fabric Interconnect and/or VIC 1440 is supported only in Intersight Managed Mode from 4.2(2) or greater, the UCSM support for FI 6536 is planned for a future release. Also the FI 6536 is supported only with 2408 IOM

Notes

1. Rear mLOM connector (see [System Board on page 54](#))
2. Rear mezzanine connector 1 (see [System Board on page 54](#))
3. Rear mezzanine connector 2 (see [System Board on page 54](#))
4. The 2304V2 is only supported with the FI-6300.
5. This is two 2x10Gbps port-channelled.
6. The FI-6454 and/or VIC 1400 requires UCSM 4.0(1) or greater.
7. This is a dual native 40G interface.
8. This is four 4x10Gbps port-channelled.
9. Mezz slot 1 (mLOM) is two 2x10Gbps port-channelled, and VIC 1x80 is a dual native 40G interface.
10. This is six 2x10Gbps port-channelled.
11. Mezz slot 1 (mLOM) is dual 10Gbps and the VIC 1x80 is two 2x10 port-channelled
12. This four native 40G interface
13. This is two 4x10Gbps port-channelled
14. This is four 2x10Gbps port-channelled

15. If running 3.2(1) or greater and equipped with either storage accelerator or SKU UCSB-F-FIO-1300MP (EOL) or UCSB-F-FIO-1600MS (EOL), then there is a dual 40G (4x10G port-channel) interface for the 2008 or a dual native 40G interface for the 2304V2. Otherwise the bandwidth is 20G (2x10Gbps port-channel) per FI.
16. If running 3.2(1) or greater and equipped with either storage accelerator or SKU UCSB-F-FIO-1300MP (EOL) or UCSB-F-FIO-1600MS (EOL), then there is a dual 20G (2x10Gbps port-channel)
17. When operating in 4x10 Gbps mode, the bandwidth drops to 40Gbps (two 2x10Gbps port-channel).
18. Supported starting with UCSM 4.1(2) and 1440+PE or 1480 can have 40G towards IOM-2408. The maximum single-flow is 25 Gbps with an aggregate of 40 Gbps. To avoid IOM transient drops due to a speed mismatch of 40 Gbps towards the server and 25 Gbps towards the fabric interconnect (FI), vNIC rate-limiting to 25 Gbps is recommended.
19. When operating in 4x10 Gbps mode, then BW drops to 40 Gbps
20. If running 3.2(1) or greater and equipped with the either storage accelerator or SKU UCSB-F-FIO-1300MP or UCSB-F-FIO-1600MS, then there is a dual native 40G interface for the 2304V2. If operating in 4x10Gbps mode, then the bandwidth drops to 40G (two 2x10Gbps port-channel)
21. The Cisco UCS 6536 Fabric Interconnect and/or VIC 1440 is supported only in Intersight Managed Mode from 4.2(2) or greater, the UCSM support for FI 6536 is planned for a future release. Also the FI 6536 is supported only with 2408 IOM

STEP 7 ORDER A TRUSTED PLATFORM MODULE (OPTIONAL)

A Trusted Platform Module (TPM) is a computer chip (microcontroller) that can securely store artifacts used to authenticate the platform (server). These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

The TPM ordering information is listed in [Table 15](#).

Table 15 Trusted Platform Module

Product ID (PID)	PID Description
UCSX-TPM2-001	Trusted Platform Module for UCS (SPI-based)
UCSX-TPM2-002	Trusted Platform Module 2.0 for UCS servers
UCSX-TPM2-002B	Trusted Platform Module2.0 M5 UCS svr (FIPS 140-2 Compliant)

NOTE: TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another server. If a server with a TPM is returned, the replacement server must be ordered with a new TPM. If there is no existing TPM in the server, you can install TPM 2.0.

STEP 8 CHOOSE OPTIONAL SECURE DIGITAL CARDS or M.2 DEVICES

A mini-storage connector is provided on the motherboard. There are two choices of mini-storage modular adapters that fit in the connector on the motherboard.

1. Adapter with two SD HC sockets that accommodate up to two SDHC cards
2. Adapter with two M.2 sockets that accommodate up to two M.2 devices

SD Cards and Modular Adapter

The SDHC card ordering information is listed in [Table 16](#).

Table 16 PIDs for Secure Digital High-Capacity Card(s) and Modular Adapter

Product ID (PID)	PID Description
UCS-SD-32G-S	32 GB SD Card for UCS servers
UCS-SD-64G-S	64 GB SD Card for UCS servers
UCS-SD-128G	128GB SD Card for UCS servers
UCS-MSTOR-SD ¹	Modular adapter for SD card

Notes

1. The SD modular adapter (PID UCS-MSTOR-SD) is auto-included in CCW and is not selectable.

NOTE: Starting from vSphere 8.0, SD cards/USB media as a standalone boot device will not be supported by VMware. For more information please refer to the VMware KB article: <https://kb.vmware.com/s/article/85685>

Supported Configurations

- (1) Select one or two Cisco secure digital cards
 - Select up to two 32, 64, or 128 GB SD cards
- (2) Do not mix SD cards
- (3) If you select SDHC cards, you cannot select any M.2 SATA SSD drive.

M.2 SATA Cards and Modular Adapter

Order one or two matching M.2 SATA SSDs (see [Table 17](#)) along with a mini storage carrier or a boot-optimized RAID controller (see [Table 18](#)).

NOTE: It is recommended that M.2 SATA SSDs be used as boot-only devices.

Each mini storage carrier or boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs shown in [Table 17](#).

Table 17 M.2 SATA SSDs

Product ID (PID)	PID Description
UCS-M2-240GB	240 GB M.2 SATA SSD
UCS-M2-960GB	960 GB M.2 SATA SSD
UCS-M2-I240GB	240 GB M.2 SATA SSD
UCS-M2-I480GB	480 GB M.2 SATA SSD

Table 18 Mini Storage Carrier/Boot-Optimized RAID Controller

Product ID (PID)	PID Description
UCS-MSTOR-M2	Mini Storage Carrier for M.2 SATA (holds up to 2 M.2 SATA SSDs)
UCS-M2-HWRAID	Cisco Boot optimized M.2 RAID controller (holds up to 2 M.2 SATA SSDs)

NOTE:

- The UCS-M2-HWRAID boot-optimized RAID controller supports RAID 1 and JBOD mode
- The UCS-M2-HWRAID controller is available only with 240 GB, 480 GB and 960 GB M.2 SSDs.
- (CIMC/UCSM) is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives
- The minimum version of Cisco IMC and Cisco UCS Manager that support this controller is 4.0(B) and later. The name of the controller in the software is MSTOR-RAID
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported
- Hot-plug replacement is not supported. The server must be powered off.
- The boot-optimized RAID controller is not supported when the server is used as a compute node in HyperFlex configurations

- Order either the Mini Storage carrier or the Boot-Optimized RAID controller from [Table 18](#).
 - Choose the UCS-MSTOR-M2 mini storage carrier for controlling the M.2 SATA drives with no RAID control.

- Choose the UCS-M2-HWRAID Boot-Optimized RAID controller for hardware RAID across the two internal SATA M.2 drives. The Boot-Optimized RAID controller holds up to 2 matching M.2 SATA drives.
- Order up to two matching M.2 SATA SSDs from [Table 17](#).

NOTE: The Boot-Optimized RAID controller supports VMWare, Windows and Linux Operating Systems

Caveats

- You cannot mix M.2 SATA SSDs with SD cards.
- Order either one or two identical M.2 SATA SSDs for the mini-storage carrier or boot-optimized RAID controller. You cannot mix M.2 SATA SSD capacities.

STEP 9 ORDER INTERNAL USB 3.0 DRIVE (OPTIONAL)

You can order one optional internal USB 3.0 drive. The USB drive ordering information is listed in [Table 19](#).

Table 19 USB 3.0 Drive

STEP 10 CHOOSE OPERATING SYSTEM AND VALUE-ADDED SOFTWARE

Several software programs are available. Select as desired from [Table 20](#).

Select

- Cisco Software ([Table 20](#))
- OEM Software ([Table 21](#))
- Operating System ([Table 22](#))

STEP 12 CHOOSE SERVICE and SUPPORT LEVEL

A variety of service options are available, as described in this section.

Unified Computing Warranty, No Contract

If you have noncritical implementations and choose to have no service contract, the following coverage is supplied:

- Three-year parts coverage.
- Next business day (NBD) onsite parts replacement eight hours a day, five days a week.
- 90-day software warranty on media.
- Ongoing downloads of BIOS, drivers, and firmware updates.
- UCSM updates for systems with Unified Computing System Manager. These updates include minor enhancements and bug fixes that are designed to maintain the compliance of UCSM with published specifications, release notes, and industry standards.

Smart Net Total Care (SNTC) for UCS

For support of the entire Unified Computing System, Cisco offers the Cisco Smart Net Total Care for UCS Service. This service provides expert software and hardware support to help sustain performance and high availability of the unified computing environment. Access to Cisco Technical Assistance Center (TAC) is provided around the clock, from anywhere in the world

For systems that include Unified Computing System Manager, the support service includes downloads of UCSM upgrades. The Cisco Smart Net Total Care for UCS Service includes flexible hardware replacement options, including replacement in as little as two hours. There is also access to Cisco's extensive online technical resources to help maintain optimal efficiency and uptime of the unified computing environment. For more information please refer to the following url: <http://www.cisco.com/c/en/us/services/technical/smart-net-total-care.html?stickynav=1>

Solution Support for UCS

Solution Support includes both Cisco product support and solution-level support, resolving complex issues in multivendor environments, on average, 43% more quickly than product support alone. Solution Support is a critical element in data center administration, to help rapidly resolve any issue encountered, while maintaining performance, reliability, and return on investment.

This service centralizes support across your multivendor Cisco environment for both our products and solution partner products you've deployed in your ecosystem. Whether there is an issue with a Cisco or solution partner product, just call us. Our experts are the primary point of contact and own the case from first call to resolution. For more information please refer to the following url: <http://www.cisco.com/c/en/us/services/technical/solution-support.html?stickynav=1>

Smart Net Total Care for UCS Hardware Only Service

For faster parts replacement than is provided with the standard Cisco Unified Computing System warranty, Cisco offers the Cisco Smart Net Total Care for UCS Hardware Only Service. You can choose from two levels of advanced onsite parts replacement coverage in as little as four hours. Smart Net Total Care for UCS Hardware Only Service provides remote access any time to Cisco support professionals who can determine if a return materials authorization (RMA) is required. Partner Support Service for UCS

Cisco Partner Support Service (PSS) is a Cisco Collaborative Services service offering that is designed for partners to deliver their own branded support and managed services to enterprise

customers. Cisco PSS provides partners with access to Cisco's support infrastructure and assets to help them:

- Expand their service portfolios to support the most complex network environments
- Lower delivery costs
- Deliver services that increase customer loyalty

PSS options enable eligible Cisco partners to develop and consistently deliver high-value technical support that capitalizes on Cisco intellectual assets. This helps partners to realize higher margins and expand their practice.

PSS is available to all Cisco PSS partners.

The two Partner Unified Computing Support Options include:

- Partner Support Service for UCS
- Partner Support Service for UCS Hardware Only

PSS for UCS provides hardware and software support, including triage support for third party software, backed by Cisco technical resources and level three support. You can choose a desired service listed in [Table 28](#).

Unified Computing Combined Support Service

Combined Services makes it easier to purchase and manage required services under one contract. SNTC services for UCS help increase the availability of your vital data center infrastructure and realize the most value from your unified computing investment. The more benefits you realize from the Cisco Unified Computing System (Cisco UCS), the more important the technology becomes to your business. These services allow you to:

- Optimize the uptime, performance, and efficiency of your UCS
- Protect your vital business applications by rapidly identifying and addressing issues
- Strengthen in-house expertise through knowledge transfer and mentoring
- Improve operational efficiency by allowing UCS experts to augment your internal staff resources
- Enhance business agility by diagnosing potential issues before they affect your operations You can choose a desired service listed in [Table 30](#).

UCS Drive Retention Service

With the Cisco Unified Computing Drive Retention Service, you can obtain a new disk drive in exchange for a faulty drive without returning the faulty drive.

Sophisticated data recovery techniques have made classified, proprietary, and confidential information vulnerable, even on malfunctioning disk drives. The Drive Retention service enables you to retain your drives and ensures that the sensitive data on those drives is not compromised, which reduces the risk of any potential liabilities. This service also enables you to comply with regulatory, local, and federal requirements.

If your company has a need to control confidential, classified, sensitive, or proprietary data, you might want to consider one of the Drive Retention Services listed in the above tables (where available)

NOTE: Cisco does not offer a certified drive destruction service as part of this service.

Local Language Technical Support for UCS

Where available, and subject to an additional fee, local language support for calls on all assigned severity levels may be available for specific product(s) - see tables above.

For a complete listing of available services for Cisco Unified Computing System, see the following URL: http://www.cisco.com/en/US/products/ps10312/serv_group_home.html

STEP 13 CHOOSE LOCAL KVM I/O CABLE (OPTIONAL)

The local KVM I/O cable ships with every UCS 5108 blade chassis accessory kit. The cable provides a connection into the server, providing a DB9 serial connector, a VGA connector for a monitor, and dual USB ports for a keyboard and mouse. With this cable, you can create a direct connection to the operating system and the BIOS running on the server.

The local KVM I/O cable ordering information is listed in [Table 31](#).

Memory Support for CPU Classes and CPU Modes

For 2nd Generation Intel® Xeon® Scalable Processors:

- DIMMs and PMem are supported
- CPU PIDs ending in “M” support up to a limit of 2048 GB per CPU
- CPU PIDs ending in “L” support up to a limit of 4608 GB per CPU
- All other CPU PIDs support up to a limit of 1024 GB per CPU
- For the App Direct Mode, both PMem and DIMM capacities count towards the CPU capacity limit
- For the Memory Mode and Mixed Mode only the PMem capacity counts towards the CPU capacity limit

For Configurations Using Only DIMMs

- CPU PIDs ending in “M” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 2048 GB per CPU (using 8 x 256 GB DIMMs).
- CPU PIDs ending in “L” support DIMM capacities up to 1536 GB per CPU (using 12 x 128 GB DIMMs) and DIMM capacities up to 3072 GB per CPU (using 12 x 256 GB DIMMs). The 4608 GB limit cannot be reached with these capacity DIMMs.
- CPU PIDs not ending in “L” or “M” support DIMM capacities up to 1024 GB per CPU (using 8 x 128 GB DIMMs or 4 x 256 GB DIMMs).

For Configurations Using DIMMs and PMem in [App Direct Mode](#)

- CPU PIDs ending in “M” support capacities up to 1792 GB per CPU (using 6 x 128 GB DIMMs and 2 x 512 GB PMem or 4 x 256 GB PMem) or up to 2048 GB per CPU (using 6 x 256 GB DIMMs and 2 x 256 GB PMem or 6 x 256 GB DIMMs and 4 x 128 GB PMem)
- CPU PIDs ending in “L” support capacities up to 3840 GB per CPU (using 6 x 128 GB DIMMs and 6 x 512 GB PMem) or up to 4608 GB per CPU (using 6 x 256 GB DIMMs and 6 x 512 GB PMem)
- CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU (using 6 x 128 GB DIMMs and 2 x 128 GB PMem).

For Configurations Using DIMMs and PMem in [Memory or Mixed Mode](#)

NOTE: For Memory and Mixed Modes, DIMMs are used as cache and do not factor into CPU capacity.

- CPU PIDs ending in “M” support capacities up to 2048 GB per CPU using:
 - 6 x 128 GB DIMMs as cache and 4 x 512 GB PMem as memory, or
 - 6x 256 GB DIMMs as cache and 4 x 512 GB PMem as memory
- CPU PIDs ending in “L” support capacities up to 3072 GB using:

- 6 x 128 GB DIMMs as cache and 6 x 512 GB PMem as memory, or
- 6 x 256 GB DIMMs as cache and 6 x 512 GB PMem as memory

The allowable 4608 limit for PMem capacity is not reached in this case.

■ CPU PIDs not ending in “L” or “M” support capacities up to 1024 GB per CPU using:

- 6 x 128 GB DIMMs as cache and 2 x 512 GB PMem as memory, or
- 6 x 256 GB DIMMs as cache and 2 x 512 GB PMem as memory

NETWORK CONNECTIVITY

For network connectivity, details please review the [Cisco UCS 5108 Blade Server Chassis Spec Sheet](#).

SPARE PARTS

This section lists the upgrade and service-related parts for the UCS B480 M5 server. Some of these parts are configured with every server or with every UCS 5108 blade server chassis.

Table 32 Spare Parts

Product ID (PID)	PID Description
Rack	
RACK-BLANK-001=	Blanking panels (qty 12), 1U, plastic, toolless. Recommended to ensure proper airflow. Fill all empty RU spaces in the front of the rack. Because each blanking panel PID includes 12 panels, use the following calculation: 42RU - occupied RU = available RU. Divide available RU by 12 to determine PID order quantity.
RACK-CBLMGT-001=	Cable mgt D rings (qty 10), metal. Use the D rings to bundle system cables to ensure proper airflow.
RACK-CBLMGT-003=	Brush strip (qty 1), 1 U. The brush strip promotes proper airflow while allowing cables to be passed from the front to the rear of the rack.
RACK-CBLMGT-011=	Cable mgt straps (qty 10), Velcro. Use the Velcro straps to bundle system cables to ensure proper airflow.
RACK2-JOIN-001=	Rack joining kit. Use the kit to connect adjacent racks within a row. Order 1 unit less than the number of racks in the row.
RACK2-GRND-001=	Cisco R42612 grounding kit

UPGRADING or REPLACING CPUs

NOTE: Before servicing any CPU, do the following:

- Decommission and power off the server.
- Slide the server out from the rack.
- Remove the top cover.

To replace an existing CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with replacement CPU.
- #1 flat-head screwdriver—Supplied with replacement CPU.
- CPU assembly tool—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPUAT=.
- Heatsink cleaning kit—Supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-HSCK=.
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=.

(2) Order the appropriate replacement CPU from [Table 3 on page 8](#).

(3) Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “Cisco UCS B480 M5 Blade Server Installation and Service Note,” found at:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B480M5/B480M5_chapter_011.html#task_xhs_hcz_tz.

To add a new CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with new CPU.
- #1 flat-head screwdriver—Supplied with new CPU
- CPU assembly tool—Supplied with new CPU. Can be ordered separately as Cisco PID UCS-CPUAT=
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCS-CPU-TIM=

(2) Order the appropriate new CPU from [Table 3 on page 8](#).

(3) Order one heat sink for each new CPU. Order PID UCSB-HS-M5-F= for front CPUs and PID UCSB-HS-M5-R= for rear CPUs.

(4) Carefully install the CPU and heatsink in accordance with the instructions found in “Cisco UCS B480 M5 Blade Server Installation and Service Note,” found at:

https://www.cisco.com/c/en/us/td/docs/unified_computing/ucs/hw/blade-servers/B480M5/B480M5_chapter_011.html#task_xhs_hcz_tz.

(5) UPGRADING or REPLACING MEMORY

NOTE: Before servicing any DIMM or PMem, do the following:

- Decommission and power off the server.
- Remove the top cover from the server
- Slide the server out the front of the chassis.

To add or replace DIMMs or PMem, follow these steps:

- (1) Order new DIMMs or PMem as needed from [Table 5 on page 13](#).
- (2) Order DIMM/PMem blanks as needed (PID UCS-DIMM-BLK=)
- (3) Open both connector latches and remove and replace the DIMM/PMem or blank as needed.

Figure 12 Replacing Memory

- (4) Press evenly on both ends of the DIMM/PMem until it clicks into place in its slot.

NOTE: Ensure that the notch in the DIMM/PMem aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM/PMem, the slot, or both.

- (5) Press the connector latches inward slightly to seat them fully.
- (6) Populate all slots with a DIMM, PMem, or DIMM blank. A slot cannot be empty.

For additional details on replacing or upgrading DIMMs and PMem, see “Cisco UCS C240 M5 Server Installation and Service Guide,” found at these links:

Power Specifications

For configuration-specific power specifications, use the Cisco UCS Power Calculator at:

<http://ucspowercalc.cisco.com>

NOTE: When using 256 GB DDR DIMMs (UCS-ML-256G8RT-H) in this server, the blade-level power capping must be set to 1300 W. For information about blade-level power capping, see the Power Capping and Power Management chapter in the Cisco UCS Manager Server Management Guide for your release: [Cisco UCS Manager Configuration Guides](#).
