## OVERVIEW

The Cisco UCS X-Series Modular System simplifies your data center, adapting to the unpredictable needs of modern applications while also providing for traditional scale-out and enterprise workloads. It reduces the number of server types to maintain, helping to improve operational efficiency and agility as it helps reduce complexity. Powered by the Cisco Intersight™ cloud operations platform, it shifts your thinking from administrative details to business outcomes with hybrid cloud infrastructure that is assembled from the cloud, shaped to your workloads, and continuously optimized.

The Cisco UCS X410c M7 Compute Node is the computing device to integrate into the Cisco UCS X-Series Modular System. Up to eight compute nodes can reside in the 7-Rack-Unit (7RU) Cisco UCS X9508 Chassis, offering one of the highest densities of compute, IO, and storage per rack unit in the industry.

The Cisco UCS X410c M7 Compute Node harnesses the power of the latest 4<sup>th</sup> Gen Intel® Xeon® Scalable Processors (Sapphire Rapids), and offers the following:

- **CPU:** Four 4<sup>th</sup> Gen Intel® Xeon® Scalable Processors (codenamed Sapphire Rapids) with up to 60 cores per processor.
- **Memory:** Up to 16TB with 64 x 256GB<sup>1</sup> DDR5-4800MT/s DIMMs, in a 4-sockets configuration.
- **Storage:** Up to 6 hot-pluggable, Solid-State Drives (SSDs), or Non-Volatile Memory Express (NVMe) 2.5-inch drives with a choice of enterprise-class Redundant Array of Independent Disks (RAID) or pass-through controllers with four lanes each of PCIe Gen 4 connectivity and up to 2 M.2 SATA drives for flexible boot and local storage capabilities.
- **mLOM virtual interface cards:**
  - Cisco UCS Virtual Interface Card (VIC) 15420 occupies the server's Modular LAN on Motherboard (mLOM) slot, enabling up to 50Gbps (2 x25Gbps) of unified fabric connectivity to each of the chassis Intelligent Fabric Modules (IFMs) for 100Gbps connectivity per server.
  - Cisco UCS Virtual Interface Card (VIC) 15231 occupies the server's Modular LAN on Motherboard (mLOM) slot, enabling up to 100Gbps of unified fabric connectivity to each of the chassis Intelligent Fabric Modules (IFM) for 200Gbps (2x 100Gbps) connectivity per server.
- **Optional Mezzanine card:**
  - Cisco UCS Virtual Interface Card (VIC) 15422 can occupy the server's mezzanine slot at the bottom rear of the chassis. An included bridge card extends this VIC's 100Gbps (4 x 25Gbps) of network connections through IFM connectors, bringing the total bandwidth to 100Gbps per VIC 15420 and 15422 (for a total of 200Gbps per server). In addition to IFM connectivity, the VIC 15422 I/O connectors link to Cisco UCS X-Fabric technology.
  - Cisco UCS PCI Mezz card for X-Fabric can occupy the server's mezzanine slot at the bottom rear of the chassis. This card's I/O connectors link to Cisco UCS X-Fabric modules and enable connectivity to the X440p PCIe Node.
- **Security:** Includes secure boot silicon root of trust FPGA, ACT2 anti-counterfeit provisions, and optional Trusted Platform Model (TPM).

## Select DIMMs and Memory Mirroring

Select the memory configuration and whether or not you want the memory mirroring option. The available memory DIMMs and mirroring option are listed in [Table 6](#).

**NOTE:** When memory mirroring is enabled, the memory subsystem simultaneously writes identical data to two channels. If a memory read from one of the channels returns incorrect data due to an uncorrectable memory error, the system automatically retrieves the data from the other channel. A transient or soft error in one channel does not affect the mirrored data, and operation continues unless there is a simultaneous error in exactly the same location on a DIMM and its mirrored DIMM. Memory mirroring reduces the amount of memory available to the operating system by 50% because only one of the two populated channels provides data.

**Table 6 Available DDR5 DIMMs**

<b>Accessories/spare included with Memory configuration:</b>	
■ UCS-DDR5-BLK <sup>2</sup> is auto included for the unselected DIMMs slots	

**Notes:**

1. [Available post first customer ship \(FCS\).](#)
2. Any empty DIMM slot must be populated with a DIMM blank to maintain proper cooling airflow.

## Memory configurations and mixing rules

- Memory on every CPU socket shall be configured identically.
- System speed is dependent on the CPU DIMM speed support. Refer to [Available CPUs on page 11](#) for DIMM speeds.
- For full details on supported memory configurations see the [M7 Memory Guide](#)
- DIMM Count Rules:
  - DIMM count for 1-CPU as reference, not really allowed in X410c M7:
    - Minimum DIMM count = 1; Maximum DIMM count = 16
    - 1, 2, 4, 6, 8, 12<sup>1</sup>, or 16 DIMMs allowed
    - 3, 5, 7, 9, 10, 11, 13, 14, 15 DIMMs not allowed.
  - Allowed DIMM count for 4-CPU:
    - Minimum DIMM count = 4; Maximum DIMM count = 64
    - 4, 8, 16, 24, 32, 48<sup>1</sup>, or 64 DIMMs allowed
    - 12, 20, 28, 36, 40, 44, 52, 56, 60 DIMMs not allowed.

**NOTE(1):** 12 DIMMs count for 1-CPU and 48 DIMMs count for 4-CPU configurations are only allowed when all DIMMs have the same density.

- DIMM Population Rules:
  - Each channel has two memory slots (for example, channel A = slots A1 and A2)
    - A channel can operate with one or two DIMMs installed.
    - If a channel has only one DIMM, populate slot 1 first (the blue slot).
  - When all CPUs are installed, populate the memory slots of each CPU identically. Fill the blue slots (slot 1) in the memory channels first according to the recommended DIMM populations in [Table 7](#).

**Table 7 M7 DIMM Population Order per socket**

#DIMMs per CPU	Population of DIMM slots per socket <sup>1</sup>	
	Slot 1 (Blue)	Slot 2 (Black)
1	A1	-
2	A1, G1	-
4	A1, C1, E1, G1	-
6	A1, C1, D1, E1, F1, G1	-
8	A1, B1, C1, D1, E1, F1, G1, H1	-
12 <sup>2</sup>	A1, B1, C1, D1, E1, F1, G1, H1	A2, C2, E2, G2
16	A1, B1, C1, D1, E1, F1, G1, H1	A2, B2, C2, D2, E2, F2, G2, H2

**Notes:**

1. See [DIMM Mixing Rules](#) for allowed combinations across slots 1 and 2.
2. Only valid when DIMMs in blue and black slots are the same density.

- DIMM Mixing Rules:

- Higher rank DIMMs shall be populated on Slot 1.
- Mixing different DIMM densities in the same slot across channels is not supported. All populated slots of the same color must have the same DIMM density.
- The DIMM mixing rules matrix is described in the [Table 8](#), below.

**Table 8** Supported DIMM mixing and population across 2 slots in each channel

Channel Mixing		DIMM Slot 2 (Black)				
DIMM Slot 1 (Blue)		16GB	32GB	64GB	128GB	256GB <sup>3</sup>
		1Rx8	1Rx4	2Rx4	4Rx4	8Rx4
16GB	1Rx8	Yes <sup>1</sup>	No	No	No	No
32GB	1Rx4	No	Yes <sup>1</sup>	No	No	No
64GB	2Rx4	No	Yes <sup>2</sup>	Yes <sup>1</sup>	No	No
128GB	4Rx4	No	No	No	Yes	No
256GB <sup>3</sup>	8Rx4	No	No	No	Yes <sup>2</sup>	Yes <sup>1</sup>

**Notes:**

1. Only 6 or 8 channels are allowed (for 2, 4, or 8 DIMMs you would just populate 1 DPC on 2, 4, or 8 channels)
2. When mixing two different DIMM densities, all 8 channels per CPU must be populated. Use of fewer than 8 channels (16 slots per CPU) is not supported.
3. [Available post first customer ship \(FCS\)](#)

**■ Memory Limitations:**

- Memory on every CPU socket shall be configured identically.
- Refer to [Table 7](#) and [Table 8](#) for DIMM population and DIMM mixing rules.
- Cisco memory from previous generation servers (DDR3 and DDR4) is not supported with the M7 servers.

**■ For best performance, observe the following:**

- For optimum performance, populate at least one DIMM per memory channel per CPU. When one DIMM per channel is used, it must be populated in DIMM slot 1 (blue slot farthest away from the CPU) of a given channel.
- The maximum 2 DPC speed is 4400 MT/s, refer to [Table 9](#) for the details.

**Table 9** DDR5-4800 DIMM 1DPC and 2DPC speed matrix

CPU speed/ DIMM speed	DDR5 DIMM 1DPC	DDR5 DIMM 2DPC
CPU 4800 MT/s	4800 MT/s	4400 MT/s

NOTE: For full details on supported memory configurations see the [M7 Memory Guide](#)

## STEP 4 CHOOSE REAR mLOM ADAPTER

The Cisco UCS X410c M7 Compute Node must be ordered with a Cisco VIC mLOM Adapter. The adapter is located at the back and can operate in a single-CPU or dual-CPU configuration.

*Table 10* shows the mLOM adapter choices.

Table 10 mLOM Adapters

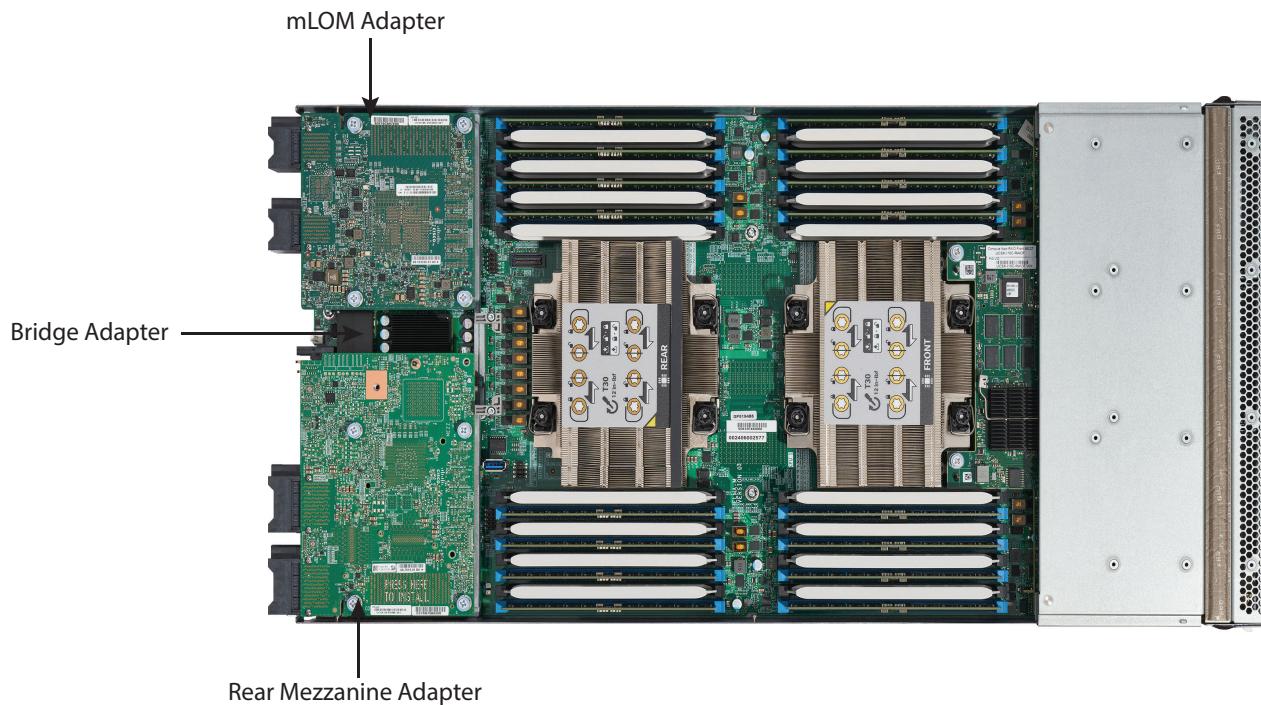

Product ID (PID)	Description	Connection type
UCSX-ML-V5D200G-D	Cisco UCS VIC 15231 2x100/200G mLOM for X410c M7 Compute Node	mLOM
UCSX-ML-V5Q50G-D	Cisco UCS VIC 15420 4x25G secure boot mLOM for X Compute Node	mLOM

NOTE:

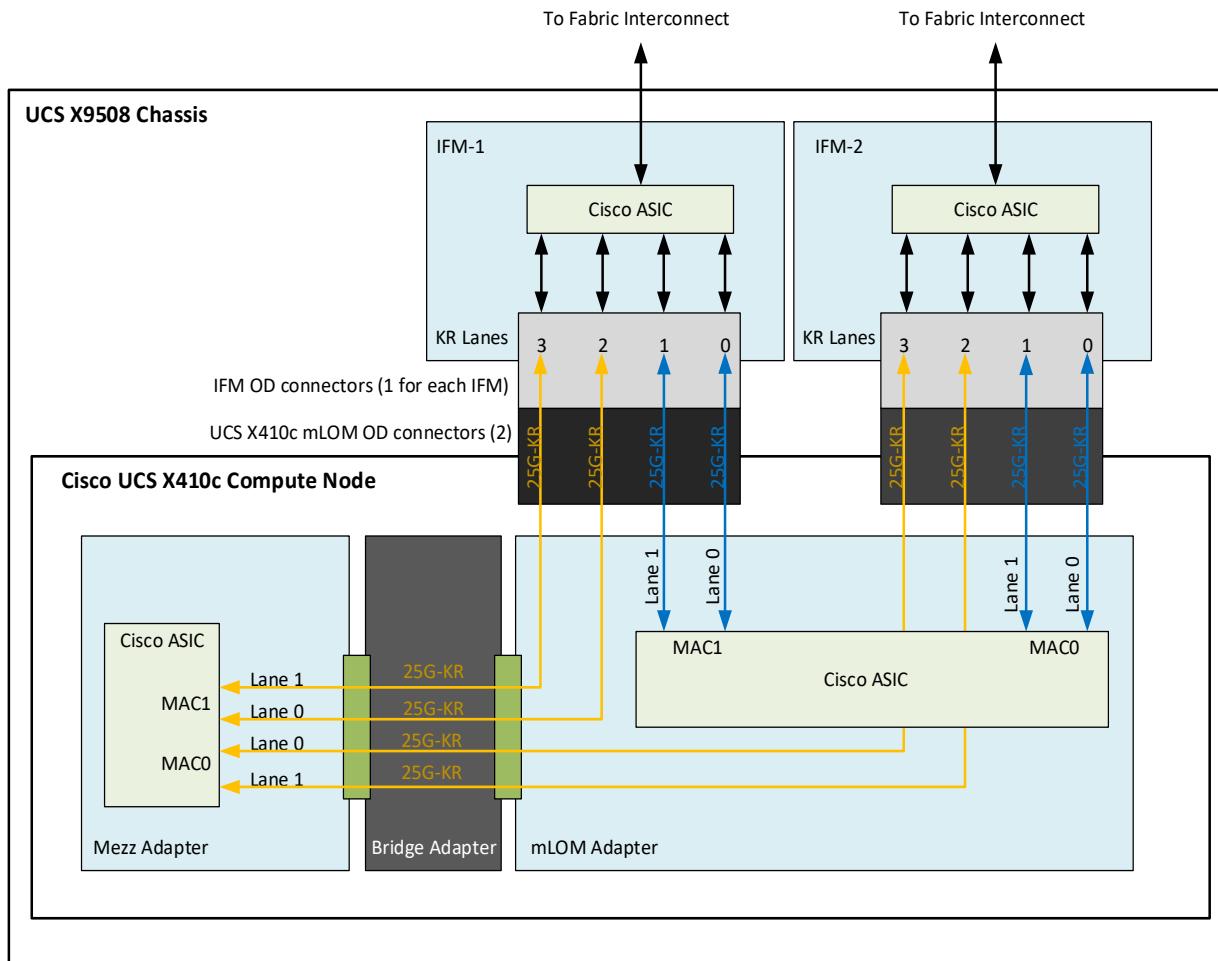

- VIC 15420, or 15231 are supported with both X9108-IFM-25G and X9108-IFM-100G. VIC 15420 will operate at 4x 25G with both X9108-IFM-25G and X9108-IFM-100G. While, VIC 15231 will operate at 4x 25G with X9108-IFM-25G and at 2x 100G with X9108-IFM-100G.
- The mLOM adapter is mandatory for the Ethernet connectivity to the network by means of the IFMs and has x16 PCIe Gen4 connectivity with Cisco UCS VIC 15420 or x16 Gen4 connectivity with Cisco UCS VIC 15231 towards the CPU1.
- There is no backplane in the Cisco UCS X9508 chassis; thus, the compute nodes directly connect to the IFMs using Orthogonal Direct connectors.
- *Figure 4* shows the location of the mLOM and rear mezzanine adapters on the Cisco UCS X410c M7 Compute Node. The bridge adapter connects the mLOM adapter to the rear mezzanine adapter.

Figure 4 Location of mLOM and Rear Mezzanine Adapters

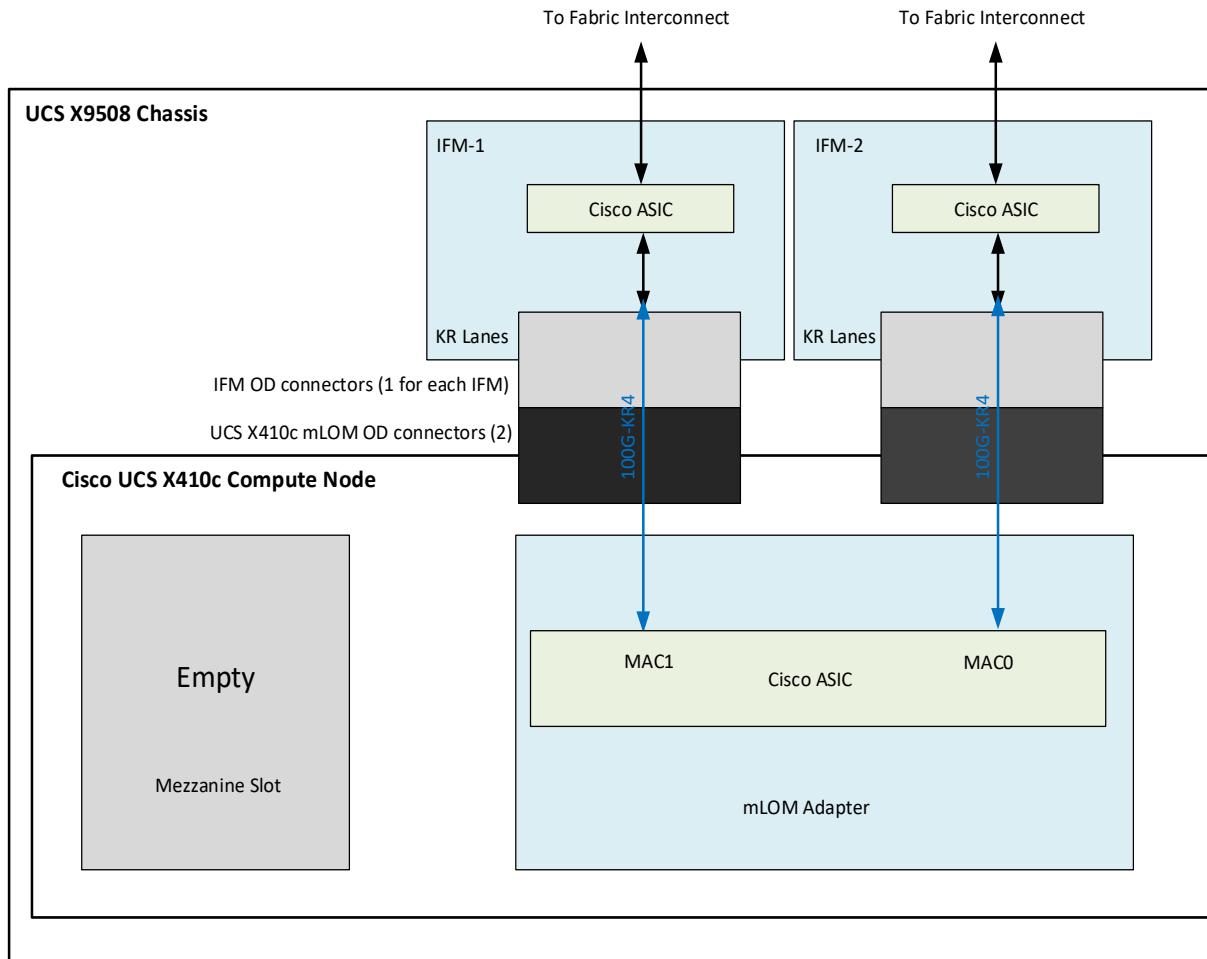

**Figure 4** shows the network connectivity from the mLOM out to the 25G IFMs.

**Figure 5 Network Connectivity 25G IFMs**

**Figure 5** shows the network connectivity from the mLOM out to the 100G IFMs.

**Figure 6 Network Connectivity 100G IFMs**

## STEP 5 CHOOSE OPTIONAL REAR MEZZANINE VIC/BRIDGE ADAPTERS

The Cisco UCS X410c M7 Compute Node has one rear mezzanine adapter connector which can have a UCS VIC 15422 Mezz card that can be used as a second VIC card on the compute node for network connectivity or as a connector to the X440p PCIe node via X-Fabric modules. The same mezzanine slot on the compute node can also accommodate a pass-through mezzanine adapter for X-Fabric which enables compute node connectivity to the X440p PCIe node. Refer to [Table 11](#) for supported adapters.

**Table 11 Available Rear Mezzanine Adapters**

Product ID(PID)	PID Description	Connector Type
<b>Cisco VIC Card</b>		
UCSX-V4-PCIME-D <sup>1</sup>	UCS PCI Mezz Card for X-Fabric	Rear Mezzanine connector on motherboard
UCSX-ME-V5Q50G-D	Cisco UCS VIC 15422 4x25G secure boot mezz for X Compute Node	Rear Mezzanine connector on motherboard
<b>Cisco VIC Bridge Card<sup>2</sup></b>		
UCSX-V5-BRIDGE-D	UCS VIC 15000 bridge to connect mLOM and mezz X Compute Node  (This bridge to connect the Cisco VIC 15420 mLOM and Cisco VIC 15422 Mezz for the X410c M7 Compute Node)	One connector on Mezz card and one connector on mLOM card

**Notes:**

1. If this adapter is selected, then two CPUs are required and UCSX-ME-V5Q50G-D or UCSX-V4-PCIME-D is required.
2. Included with the Cisco VIC 15422 mezzanine adapter.

**NOTE:** The UCSX-V4-PCIME-D rear mezzanine card for X-Fabric has PCIe Gen4 x16 connectivity towards each CPU1 and CPU2. Additionally, the UCSX-V4-PCIME-D also provides two PCIe Gen4 x16 to each X-fabric. This rear mezzanine card enables connectivity from the X410c M7 Compute Node to the X440p PCIe node.

### Supported Configurations

- One of mLOM VIC from [Table 10](#) is always required.
- If a UCSX-ME-V5Q50G-D rear mezzanine VIC card is installed, a UCSX-V5-BRIDGE-D VIC bridge card is included and connects the mLOM to the mezzanine adapter.
- The UCSX-ME-V5Q50G-D rear mezzanine card has Ethernet connectivity to the IFM using the UCSX-V5-BRIDGE-D and has a PCIE Gen4 x16 connectivity towards CPU2. Additionally, the UCSX-ME-V5Q50G-D also provides two PCIe Gen4 x16 to each X-fabric.
- All the connections to Cisco UCS X-Fabric 1 and Cisco UCS X-Fabric 2 are through the Molex Orthogonal Direct (OD) connector on the mezzanine card.
- The rear mezzanine card has 32 x16PCIe lanes to each Cisco UCS X-Fabric for I/O expansion to enable resource consumption from the PCIe resource nodes.

## STEP 6 CHOOSE OPTIONAL FRONT MEZZANINE ADAPTER

The Cisco UCS X410c M7 Compute Node has one front mezzanine connector that can accommodate one of the following mezzanine cards:

- Pass-through controller for up to 6 U.2 NVMe drives
- RAID controller (RAID 0, 1, 5, 10) for 6 SAS/SATA drives **or** up to 4 U.2 NVMe drives

### NOTE:

- The Cisco UCS X410c M7 Compute Node can be ordered with or without the front mezzanine adapter. Refer to [Table 13 Available Front Mezzanine Adapters](#)

<b>NOTE:</b> Cisco uses solid state drives from several vendors. All solid state drives are subject to physical write limits and have varying maximum usage limitation specifications set by the manufacturer. Cisco will not replace any solid state drives that have exceeded any maximum usage specifications set by Cisco or the manufacturer, as determined solely by Cisco.				

**Notes:**

1. SSD drives require the **UCSX-X10C-RAIDF-D** front mezzanine adapter
2. For SSD drives to be in a RAID group, two identical SSDs must be used in the group.
3. If SSDs are in JBOD Mode, the drives do not need to be identical.
4. NVMe drives require a front mezzanine the **UCSX-X10C-PT4F-D** pass through controller or **UCSX-X10C-RAIDF-D** RAID controller.
5. A maximum of 4x NVMe drives can be ordered with RAID controller.

## STEP 10 ORDER M.2 SATA SSDS AND RAID CONTROLLER

- **Cisco 6GB/s SATA Boot-Optimized M.2 RAID Controller (included):** Boot-Optimized RAID controller (UCSX-M2-HWRD-FPS) for hardware RAID across two SATA M.2 storage modules. The Boot-Optimized RAID controller plugs into the motherboard and the M.2 SATA drives plug into the Boot-Optimized RAID controller.

**NOTE:**

- The UCSX-M2-HWRD-FPS is auto included with the server configuration
- The UCSX-M2-HWRD-FPS controller supports RAID 1 and JBOD mode and is available only with 240GB and 960GB M.2 SATA SSDs.
- Cisco IMM is supported for configuring of volumes and monitoring of the controller and installed SATA M.2 drives
- Hot-plug replacement is not supported. The compute node must be powered off to replace.
- The Boot-Optimized RAID controller supports VMware, Windows, and Linux Operating Systems

**Table 17 Boot-Optimized RAID controller (auto included)**

Product ID (PID)	PID Description
UCSX-M2-HWRD-FPS	UCSX Front panel with M.2 RAID controller for SATA drives

- **Select Cisco M.2 SATA SSDs:** Order one or two matching M.2 SATA SSDs. This connector accepts the boot-optimized RAID controller (see [Table 17](#)). Each boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs shown in [Table 18](#).

**NOTE:**

- Each boot-optimized RAID controller can accommodate up to two SATA M.2 SSDs shown in [Table 18](#). The boot-optimized RAID controller plugs into the motherboard.
- It is recommended that M.2 SATA SSDs be used as boot-only devices.
- The SATA M.2 drives can boot in UEFI mode only. Legacy boot mode is not supported.

## STEP 11 CHOOSE OPTIONAL TRUSTED PLATFORM MODULE

Trusted Platform Module (TPM) is a computer chip or microcontroller that can securely store artifacts used to authenticate the platform or Cisco UCS X410c M7 Compute Node. These artifacts can include passwords, certificates, or encryption keys. A TPM can also be used to store platform measurements that help ensure that the platform remains trustworthy. Authentication (ensuring that the platform can prove that it is what it claims to be) and attestation (a process helping to prove that a platform is trustworthy and has not been breached) are necessary steps to ensure safer computing in all environments.

**Table 19 Available TPM Option**

Product ID (PID)	Description
UCSX-TPM-002C-D	Trusted Platform Module 2.0, FIPS140-2 Compliant, UCS M7 server
UCSX-TPM-OPT-OUT <sup>1</sup>	OPT OUT, TPM 2.0, TCG, FIPS140-2, CC EAL4+ Certified

**Notes:**

1. Please note Microsoft certification requires a TPM 2.0 for bare-metal or guest VM deployments. Opt-out of the TPM 2.0 voids the Microsoft certification.

**NOTE:**

- The TPM module used in this system conforms to TPM v2.0 as defined by the Trusted Computing Group (TCG).
- TPM installation is supported after-factory. However, a TPM installs with a one-way screw and cannot be replaced, upgraded, or moved to another compute node. If a Cisco UCS X410c M7 Compute Node with a TPM is returned, the replacement Cisco UCS X410c M7 Compute Node must be ordered with a new TPM. If there is no existing TPM in the Cisco UCS X410c M7 Compute Node, you can install a TPM 2.0. Refer to the following document for Installation location and instructions:

(2) Order the appropriate replacement CPU from [Available CPUs on page 11](#).

Carefully remove and replace the CPU and heatsink in accordance with the instructions found in “Cisco UCS X410c M7 Compute Node Installation and Service Note,” found at: [https://www.cisco.com/content/en/us/td/docs/unified\\_computing/ucs/x/hw/x410c-m7/install/b-cisco-ucs-x410c-m7-install-guide.html](https://www.cisco.com/content/en/us/td/docs/unified_computing/ucs/x/hw/x410c-m7/install/b-cisco-ucs-x410c-m7-install-guide.html)

(3) .

To add a new CPU, follow these steps:

(1) Have the following tools and materials available for the procedure:

- T-30 Torx driver—Supplied with new CPU.
- #1 flat-head screwdriver—Supplied with new CPU
- CPU assembly tool—Supplied with new CPU. Can be ordered separately as Cisco PID UCSX-CPUAT=
- Thermal interface material (TIM)—Syringe supplied with replacement CPU. Can be ordered separately as Cisco PID UCSX-CPU-TIM=

(2) Order the appropriate new CPU from [Table 4 on page 11](#).

(3) Order one heat sink for each new CPU. Order PID UCSX-C-M7-HS-F= for the front CPU socket and PID UCSX-C-M6-HS-R= for the rear CPU socket.

Carefully install the CPU and heatsink in accordance with the instructions found in “Cisco UCS X410c M7 Compute Node Installation and Service Note,” found at:

## UPGRADING or REPLACING MEMORY

**NOTE:** Before servicing any DIMM or PMem, do the following:

- Decommission and power off the compute node.
- Slide the Cisco UCS X410c M7 Compute Node out from its chassis.
- Remove the top cover.

To add or replace DIMMs or PMem, follow these steps:

To add or replace DIMMs or PMem, follow these steps:

Step 1 Open both DIMM connector latches.

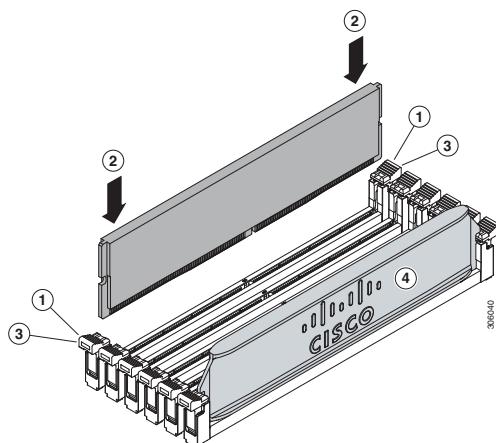

Step 2 Press evenly on both ends of the DIMM until it clicks into place in its slot

Note: Ensure that the notch in the DIMM aligns with the slot. If the notch is misaligned, it is possible to damage the DIMM, the slot, or both.

Step 3 Press the DIMM connector latches inward slightly to seat them fully.

Step 4 Populate all slots with a DIMM or DIMM blank. A slot cannot be empty.
