Cisco UCS Faults and Error Messages Reference

July 13, 2010
Revised: April 21, 2011

CONTENTS

Preface

This preface includes the following sections:

- Audience, page i
- Organization, page i
- Related Documentation, page ii
- Obtaining Documentation and Submitting a Service Request, page ii

Audience

This troubleshooting guide is designed for users who are responsible for troubleshooting issues that arise with a Cisco UCS instance.

Organization

This reference guide is organized into the following parts and chapters:

- Cisco UCS Manager Faults
  - Chapter 1, "Introduction to UCS Faults"
  - Chapter 2, "Cisco UCS Faults"
  - Chapter 3, "FSM Faults"
  - Chapter 4, "Call Home Faults in Cisco UCS Manager"
  - Chapter 5, "Troubleshooting Transient Faults"
- Cisco UCS Manager SEL Messages
  - Chapter 6, "Introduction to System Event Log Messages"
  - Chapter 7, "BIOS Messages"
  - Chapter 8, "Baseboard Management Controller Messages"
- Cisco UCS Error Messages
  - Chapter 9, "Cisco UCS Error Messages"

Related Documentation

A roadmap that lists all documentation for the Cisco Unified Computing System (Cisco UCS) is available at the following URL:

http://www.cisco.com/en/US/products/ps10477/products_documentation_roadmaps_list.html

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as an RSS feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.

C H A P T E R **1**

Introduction to UCS Faults

This chapter provides an overview of faults in Cisco Unified Computing System (UCS). This chapter contains the following sections:

Note For NX-OS Fault messages, go to the Cisco NX-OS System Messages Reference.

Overview of Faults

This section includes the following topics:

About Faults in the Cisco UCS

In the Cisco UCS, a fault is a mutable object that is managed by the Cisco UCS Manager. Each fault represents a failure in the Cisco UCS instance or an alarm threshold that has been raised. During the lifecycle of a fault, it can change from one state or severity to another.

Each fault includes information about the operational state of the affected object at the time the fault was raised. If the fault is transitional and the failure is resolved, then the object transitions to a functional state.

A fault remains in the Cisco UCS Manager until the fault is cleared and deleted according to the settings in the fault collection policy.

You can view all faults in the Cisco UCS instance from either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI. You can also configure the fault collection policy to determine how a Cisco UCS instance collects and retains faults.

Note   All Cisco UCS faults can be trapped by SNMP.

Fault Severities

A fault raised in a Cisco UCS instance can transition through more than one severity during its lifecycle. Table 1-1 describes the possible fault severities in alphabetical order.

Table 1-1   Fault Severities in Cisco UCS

Severity	Description
Cleared	A notification that the condition that caused the fault has been resolved, and the fault has been cleared.
Condition	An informational message about a condition, possibly independently insignificant.
Critical	A service-affecting condition that requires immediate corrective action. For example, this severity could indicate that the managed object is out of service and its capability must be restored.
Info	A basic notification or informational message, possibly independently insignificant.
Major	A service-affecting condition that requires urgent corrective action. For example, this severity could indicate a severe degradation in the capability of the managed object and that its full capability must be restored.
Minor	A non-service-affecting fault condition that requires corrective action to prevent a more serious fault from occurring. For example, this severity could indicate that the detected alarm condition is not currently degrading the capacity of the managed object.
Warning	A potential or impending service-affecting fault that currently has no significant effects in the system. Action should be taken to further diagnose, if necessary, and correct the problem to prevent it from becoming a more serious service-affecting fault.

Fault Types

A fault raised in a Cisco UCS instance can be one of the types described in Table 1-2.

Table 1-2   Types of Faults in Cisco UCS

Type	Description
fsm	An FSM task has failed to complete successfully, or the Cisco UCS Manager is retrying one of the stages of the FSM.
equipment	The Cisco UCS Manager has detected that a physical component is inoperable or has another functional issue.
server	The Cisco UCS Manager is unable to complete a server task, such as associating a service profile with a server.
configuration	The Cisco UCS Manager is unable to successfully configure a component.
environment	The Cisco UCS Manager has detected a power problem, thermal problem, voltage problem, or a loss of CMOS settings.
management	The Cisco UCS Manager has detected a serious management issue, such as one of the following: • Critical services could not be started. • The primary switch could not be identified. • Components in the instance include incompatible firmware versions.
connectivity	The Cisco UCS Manager has detected a connectivity problem, such as an unreachable adapter.
network	The Cisco UCS Manager has detected a network issue, such as a link down.
operational	Cisco UCS Manager has detected an operational problem, such as a log capacity issue or a failed server discovery.

Properties of Faults

The Cisco UCS Manager provides detailed information about each fault raised in a Cisco UCS instance. Table 1-3 describes the fault properties that can be viewed in the Cisco UCS Manager CLI or the Cisco UCS Manager GUI.

Table 1-3   Fault Properties

Property Name	Description
Severity	The current severity level of the fault. This can be any of the severities described in Table 1-1 on page 1-2.
Last Transition	The day and time on which the severity for the fault last changed. If the severity has not changed since the fault was raised, this property displays the original creation date.
Affected Object	The component that is affected by the condition that raised the fault.

Table 1-3   *Fault Properties*

Property Name	Description
Description	The description of the fault.
ID	The unique identifier assigned to the fault.
Status	Additional information about the fault state. This can be any of the states described in Table 1-4 on page 1-5.
Type	The type of fault that has been raised. This can be any of the types described in Table 1-2 on page 1-3.
Cause	The unique identifier associated with the condition that caused the fault.
Created at	The day and time when the fault occurred.
Code	The unique identifier assigned to the fault.
Number of Occurrences	The number of times the event that raised the fault occurred.
Original Severity	The severity assigned to the fault on the first time that it occurred.
Previous Severity	If the severity has changed, this is the previous severity.
Highest Severity	The highest severity encountered for this issue.

Lifecycle of Faults

The faults in Cisco UCS are stateful, and a fault raised in a Cisco UCS instance transitions through more than one state during its lifecycle. In addition, only one instance of a given fault can exist on each object. If the same fault occurs a second time, the Cisco UCS increases the number of occurrences by one.

A fault has the following lifecycle:

1. A condition occurs in the system and the Cisco UCS raises a fault in the active state.

2. If the fault is alleviated within a short period of time know as the flap interval, the fault severity remains at its original active value but the fault enters the soaking state. The soaking state indicates that the condition that raised the fault has cleared, but the system is waiting to see whether the fault condition reoccurs.

3. If the condition reoccurs during the flap interval, the fault enters the flapping state. Flapping occurs when a fault is raised and cleared several times in rapid succession. If the condition does not reoccur during the flap interval, the fault is cleared.

4. Once cleared, the fault enters the retention interval. This interval ensures that the fault reaches the attention of an administrator even if the condition that caused the fault has been alleviated, and that the fault is not deleted prematurely. The retention interval retains the cleared fault for the length of time specified in the fault collection policy.

5. If the condition reoccurs during the retention interval, the fault returns to the active state. If the condition does not reoccur, the fault is deleted.

When a fault is active, the additional lifecycle state information listed in Table 1-4 may be provided in the Status field of the fault notification.

Table 1-4   Fault Lifecycle States

State	Description
Soaking	A fault was raised and then cleared within a short time known as the flap interval. Since this may be a flapping condition, the fault severity remains at its original active value, but this state indicates that the condition that raised the fault has cleared.
	If the fault does not reoccur, the fault moves into the cleared state. Otherwise, the fault moves into the flapping state.
Flapping	A fault was raised, cleared, and then raised again within a short time known as the flap interval.

Fault Collection Policy

The fault collection policy controls the lifecycle of a fault in the Cisco UCS instance, including the length of time that each fault remains in the flapping and retention intervals.

Tip   For information on how to configure the fault collection policy, see the Cisco UCS configuration guides, accessible through the *Cisco UCS B-Series Servers Documentation Roadmap*.

Faults in Cisco UCS Manager

This section includes the following topics:

- Faults in Cisco UCS Manager GUI, page 1-5
- Faults in Cisco UCS Manager CLI, page 1-6

Faults in Cisco UCS Manager GUI

If you want to view the faults for a single object in the system, navigate to that object in the Cisco UCS Manager GUI and then click the Faults tab in the Work pane. If you want to view the faults for all objects in the system, navigate to the Faults node on the Admin tab under the Faults, Events and Audit Log.

In addition, a summary of all faults can be viewed in a Cisco UCS instance. Go to the Fault Summary area in the upper left of the Cisco UCS Manager GUI. This area provides a summary of all faults that have occurred in the Cisco UCS instance.

Each fault severity is represented by a different icon. The number below each icon indicates how many faults of that severity have occurred in the system. When you click an icon, the Cisco UCS Manager GUI opens the Faults tab in the Work pane and displays the details of all faults with that severity.

Faults in Cisco UCS Manager CLI

If you want to view the faults for all objects in the system, at the top-level scope, enter the **show fault** command. If you want to view faults for a specific object, scope to that object and then enter the **show fault** command.

If you want to view all of the available details about a fault, enter the **show fault detail** command.

Overview of the Finite State Machine

This section includes the following topics:

- About the Finite State Machine in Cisco UCS, page 1-6
- FSM Stage Names, page 1-7
- FSM in Cisco UCS Manager, page 1-7

About the Finite State Machine in Cisco UCS

A finite state machine (FSM) is a workflow model, similar to a flow chart, that is composed of the following:

- Finite number of stages (states)
- Transitions between those stages
- Operations

The current stage in the FSM is determined by past stages and the operations performed to transition between the stages. A transition from one stage to another stage is dependent on the success or failure of an operation.

Cisco UCS Manager uses FSM tasks that run in the Data Management Engine (DME) to manage end points in the UCS object model, including the following:

- Physical components (chassis, I/O module, servers)
- Logical components (LAN cloud, policies)
- Workflows (server discovery, service profile management, downloads, upgrades, backups)

The DME manages the FSM stages and transition, and instructs the Application Gateway (AG) to perform operations on the managed end points. Therefore, each stage can be considered to be an interaction between the DME, the AG, and the managed end point. The AGs do the real work of interacting with managed end points, such as the CIMC, the adapter, or the I/O module

When all of the FSM stages have run successfully, the Cisco UCS considers that the FSM operation is successful.

If the FSM encounters an error or a timeout at a stage, the FSM retries that stage at scheduled intervals. When the retry count has been reached for that stage, the FSM stops and the Cisco UCS Manager declares that the change have failed. If an FSM task fails, the Cisco UCS Manager raises the appropriate faults and alarms.

The mMultiple FSM tasks can be associated to an end point. However, only one FSM task at a time can run. Additional FSM tasks for the same end point are placed in a queue and are scheduled to be run when the previous FSM task is either successfully completed or the task fails.

You can view the FSM details for a particular end point to determine if a task succeeded or failed. You can also use the FSM to troubleshoot any failures.

FSM Stage Names

The FSM stage names are constructed using the following notation

Fsm*ObjectWorkflowOperationWhere-is-it-executed*

where:

- *Object* is the object that the FSM is running, such as the Blade or Chassis.
- *Workflow* is the overall task being performed by the FSM, such as Discover or Association.
- *Operation* is the task being performed at a particular stage, such as Pnuos-Config.
- *Where-is-it-executed* is generally "", or "A" or "B" or "Local" or "Peer". If this is not specified, it is executed on the managingInst node.

Each FSM stage name has a prefix that identifies the FSM and a suffix that identifies a stage within the FSM. The prefix notation is **Fsm***ObjectWorkflow* and the suffix notation is *OperationWhere-is-it-executed*. For example, if the FSM name is **FsmComputeBladeDiscoverBmcInventory**:

- The prefix is **FsmComputeBladeDiscover**
- The suffix is **BmcInventory**

FSM in Cisco UCS Manager

This section includes the following topics:

FSM in the Cisco UCS Manager GUI

The Cisco UCS Manager GUI displays the FSM information for an end point on the FSM tab for that end point. You can use the FSM tab to monitor the progress and status of the current FSM task and view a list of the pending FSM tasks.

The information about a current FSM task in the Cisco UCS Manager GUI is dynamic and changes as the task progresses. You can view the following information about the current FSM task:

- FSM task being executed
- Current state of that task
- Time and status of the previously completed task
- Any remote invocation error codes returned while processing the task
- Progress of the current task

To view the FSM task for an end point that supports FSM, navigate to the end point in the Navigation pane and click on the FSM tab in the Work pane.

FSM in the Cisco UCS Manager CLI

The Cisco UCS Manager CLI can display the FSM information for an end point when you are in the command mode for that end point.

Enter the **show fsm status** command in the appropriate mode to view the current FSM task for an end point. The information displayed about a current FSM task in the CLI is static. You must re-enter the command to see the progress updates. The following example displays the information about the current FSM task for the server in chassis 1, slot 6:

```
UCS-A# scope server 1/6
UCS-A /chassis/server # show fsm status
Slot: 6
Server: sys/chassis-1/blade-6
    FSM 1:
        Remote Result: Not Applicable
        Remote Error Code: None
        Remote Error Description:
        Status: Discover Blade Boot Wait
        Previous Status: Discover Blade Boot Wait
        Timestamp: 2006-01-26T23:31:36
        Try: 0
        Flags: 0
        Progress (%): 33
        Current Task: Waiting for system reset on server 1/6
(FSM-STAGE:sam:dme:ComputeBladeDiscover:BladeBootWait)
```

Enter the **show fsm task** command in the appropriate mode to view all of the pending tasks in the FSM queue. The following example displays the FSM task queue for the server in chassis 1, slot 6:

```
UCS-A# scope server 1/6
UCS-A /chassis/server # show fsm task

FSM Task:
    Item              ID        Completion   FSM Flags
    ---------------- -------- ------------ ---------
    Powercycle        1154858 Scheduled
    BiosRecovery      1154860 Scheduled
```

Cisco Error Message Decoder

The Error Message Decoder parses published System Message Guides and provides easy error message search capabilities for Cisco customers.

To use the Error Message Decoder:

Step 1 Click the following link: http://www.cisco.com/cgi-bin/Support/Errordecoder/index.cgi

Step 2 Log in.

Step 3 Paste the error message into the field indicated.

Step 4 Click **Submit**.

CHAPTER **2**

Cisco UCS Faults

This chapter provides information about the faults that may be raised in a Cisco UCS instance.

This chapter contains the following sections:

Adapter-Related Faults

This section contains faults raised as a result of issues with the adapters in a server.

fltAdaptorExtEthIfMisConnect

Fault Code:F0625

Message

Adapter [id] eth interface [id] in server [id] mis-connected

Explanation

The network facing adaptor interface's link is misconnected.The Cisco UCS Manager raises this fault when any of the following scenario occur:

- UCSM detects a new connectivity between previously configured switch port/fex port and reported adaptor external interface.
- UCSM detects a misconnected link between a fabric interconnect/fex and its non-peer adaptor's interface.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check whether the adaptor link is connected to a port belonging to its peer fabric interconnect/fabric extender.

Step 3   If connectivity seems correct, reacknowledge the server.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-misconnected
mibFaultCode: 625
mibFaultName: fltAdaptorExtEthIfMisConnect
moClass: adaptor:ExtEthIf
Type: network
```

fltAdaptorExtEthIfMissing

Fault Code:F0775

Message

Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation

The network facing adaptor interface's link is missingThe Cisco UCS Manager raises this fault when any of the following scenario occur:

- UCSM detects a missing connectivity between previously configured switch port/fex port and its previous peer adaptor external interface.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check whether there is any adaptor link misconnected to non-peer fabric interconnect/fabric extender

Step 3   If connectivity seems correct, reacknowledge the server

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: 775
mibFaultName: fltAdaptorExtEthIfMissing
moClass: adaptor:ExtEthIf
Type: network
```

fltAdaptorExtIfLink-down

Fault Code:F0209

Message

Adapter uplink interface [id]/[id]/[id] link state: [linkState]Adapter uplink interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]

Explanation

The network facing adaptor interface's link is down.The Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The UCSM can not establish and/or validate adaptor's connectivity to any one of the fabric interconnects.
- Endpoint reports the link down (or vNIC down) event on the adaptor link
- Endpoint reports the errored link state (or errored vnic state) event on the adaptor link

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check whether the adaptor is connected and configured properly and it is running the recommended firmware version.

Step 3   If the server is stuck at discovery, decommision the server and reacknowledge the server slot.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: link-down
mibFaultCode: 209
mibFaultName: fltAdaptorExtIfLinkDown
moClass: adaptor:ExtIf
Type: network
```

fltAdaptorHostEthIfMisConnect

Fault Code:F0626

Message

Adapter [id] eth interface [id] in server [id] mis-connected

Explanation

network facing host interface link is misconnectedCisco UCS Manager raises this fault when any of the following scenario occur:

- UCSM detects a new connectivity between previously configured switch port and reported host ethernet interface.

- UCSM detects a misconnected link between host interface & its non-peer fabric interconnect.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check whether the adaptor link is connected to a port belonging to its peer fabric interconnect.

Step 3   If connectivity seems correct, reacknowledge the server.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-misconnected
mibFaultCode: 626
mibFaultName: fltAdaptorHostEthIfMisConnect
moClass: adaptor:HostEthIf
Type: network
```

Send document comments to ucs-docfeedback@cisco.com

fltAdaptorHostEthIfMissing

Fault Code:F0708

Message

Connection to Adapter [id] eth interface [id] in server [id] missing

Explanation

network facing host interface link is missingCisco UCS Manager raises this fault when any of the following scenario occur:

- UCSM detects a missing connectivity between previously configured switch port and its previous peer host interface

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check whether there is any adaptor link misconnected to non-peer fabric interconnect

Step 3 If connectivity seems correct, reacknowledge the server

Step 4 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: 708
mibFaultName: fltAdaptorHostEthIfMissing
moClass: adaptor:HostEthIf
Type: network
```

fltAdaptorHostIfLink-down

Fault Code:F0207

Message

Adapter [transport] host interface [id]/[id]/[id] link state: [linkState]Adapter [transport] host interface [chassisId]/[slotId]/[id]/[id] link state: [linkState]

Explanation

This fault typically occurs as a result of one of the following issues:

- The fabric interconnect is in the End-Host mode, and all uplink ports failed.

- The server port to which the adapter is pinned failed.

- A transient error that caused the link to fail.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 If an associated port is disabled, enable the port.

Step 3 Reacknowledge the server with the adapter that has the failed link.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: link-down
mibFaultCode: 207
mibFaultName: fltAdaptorHostIfLinkDown
moClass: adaptor:HostIf
Type: network
```

fltAdaptorUnitAdaptorReachability

Fault Code:F0206

Message

Adapter [id]/[id] is unreachableAdapter [chassisId]/[slotId]/[id] is unreachable

Explanation

The Cisco UCS Manager cannot access the adapter.This fault typically occurs as a result of one of the following issues:

- The server does not have sufficient power.
- The I/O module is not functional.
- The adapter firmware has failed.
- The adapter is not functional.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check the POST results for the server.In the Cisco UCS Manager GUI, you can access the POST results on the General tab for the server. In the Cisco UCS Manager CLI, access the POST results through the **show post** command under the scope for the server.

Step 3 In the Cisco UCS Manager, check the power state of the server.

Step 4 Verify that the physical server has the same power state.

Step 5 If the server is off, turn the server on.

Step 6 If the server is on, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: info
Cause: connectivity-problem
mibFaultCode: 206
mibFaultName: fltAdaptorUnitAdaptorReachability
moClass: adaptor:Unit
Type: connectivity
```

fltAdaptorUnitMissing

Fault Code:F0203

Message

Adapter [id] in server [id] presence: [presence]Adapter [id] in server [chassisId]/[slotId] presence: [presence]

Explanation

The IO adaptor unit is missing The Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Endpoint reports there is no mezz card plugged into an adaptor slot
- Endpoint can not detect/communicate to the mezz card plugged into an adaptor slot

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure the mezz card is plugged into an adaptor slot in the server.

Step 3   Check whether the adaptor is connected and configured properly and it is running the recommended firmware version.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: warning
Cause: equipment-missing
mibFaultCode: 203
mibFaultName: fltAdaptorUnitMissing
moClass: adaptor:Unit
Type: equipment
```

fltAdaptorUnitUnidentifiable-fru

Fault Code:F0200

Message

Adapter [id] in server [id] has unidentified FRUAdapter [id] in server [chassisId]/[slotId] has unidentified FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected an unsupported adapter. For example, the model, vendor, or revision is not recognized.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that a supported adapter is installed.

Step 3   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: unidentifiable-fru
mibFaultCode: 200
mibFaultName: fltAdaptorUnitUnidentifiableFru
moClass: adaptor:Unit
Type: server
```

Chassis-Related Faults

This section contains faults raised as a result of issues related to a chassis in the Cisco UCS instance.

fltEquipmentChassisIdentity

Fault Code:F0404

Message

Chassis [id] has a mismatch between FRU identity reported by Fabric/IOM vs. FRU identity reported by CMC

Explanation

This fault typically occurs when an I/O module has corrupted or has malformed FRU information.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: 404
mibFaultName: fltEquipmentChassisIdentity
moClass: equipment:Chassis
Type: equipment
```

fltEquipmentChassisIdentity-unestablishable

Fault Code:F0543

Message

Chassis [id] has an invalid FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 3   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: identity-unestablishable
mibFaultCode: 543
mibFaultName: fltEquipmentChassisIdentityUnestablishable
moClass: equipment:Chassis
Type: equipment
```

fltEquipmentChassisInoperable

Fault Code:F0456

Message

Chassis [id] operability: [operability]

Explanation

This fault typically occurs for one of the following reasons:

- The fabric interconnect cannot communicate with a chassis. For a cluster configuration, this fault means that neither fabric interconnect can communicate with the chassis.

- The chassis has an invalid FRU.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 In Cisco UCS Manager, acknowledge the chassis that raised the fault.

Step 3 Physically unplug and re-plug the power cord to the chassis.

Step 4 Verify that the I/O modules are functional.

Step 5 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: 456
mibFaultName: fltEquipmentChassisInoperable
moClass: equipment:Chassis
Type: equipment
```

fltEquipmentChassisPowerProblem

Fault Code:F0408

Message

Power state on chassis [id] is [power]

Explanation

This fault typically occurs when the chassis fails to meet the minimal power requirements defined in the power policy or when one or more power supplies have failed.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 In Cisco UCS Manager, verify that all PSUs for the chassis are functional.

Step 3 Verify that all PSUs are seated properly within the chassis and are powered on.

Step 4 Physically unplug and re-plug the power cord to the chassis.

Step 5 If all PSUs are operating at maximum capacity, either add more PSUs to the chassis or redefine the power policy in the Cisco UCS Manager.

Step 6 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: 408
mibFaultName: fltEquipmentChassisPowerProblem
moClass: equipment:Chassis
Type: environmental
```

fltEquipmentChassisSeeprom-inoperable

Fault Code:F0733

Message

Device [id] SEEPROM operability: [seepromOperState]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: equipment-inoperable

```

fltEquipmentChassisThermalThresholdCritical

Fault Code:F0409

Message

Temperature on chassis [id] is [thermal]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

Cause: thermal-problem
mibFaultCode: 411
mibFaultName: fltEquipmentChassisThermalThresholdNonRecoverable
moClass: equipment:Chassis
Type: environmental
```

fltEquipmentChassisUnacknowledged

Fault Code:F0400

Message

Chassis [id] connectivity configuration: [configState]

Explanation

This fault typically occurs when or more of the I/O module links from the chassis are unacknowledged.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check the state of the I/O module links.

Step 3 Reacknowledge the chassis.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
mibFaultCode: 400
mibFaultName: fltEquipmentChassisUnacknowledged
moClass: equipment:Chassis
Type: connectivity
```

fltEquipmentChassisUnsupportedConnectivity

Fault Code:F0399

Message

Current connectivity for chassis [id] does not match discovery policy: [configState]

Explanation

This fault typically occurs when the current connectivity for a chassis does not match the configuration in the chassis discovery policy.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the correct number of links are configured in the chassis discovery policy.

Step 3   Check the state of the I/O module links.

Step 4   Reacknowledge the chassis.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: 399
mibFaultName: fltEquipmentChassisUnsupportedConnectivity
moClass: equipment:Chassis
Type: connectivity
```

fltFabricComputeSlotEpMisplacedInChassisSlot

Fault Code:F0156

Message

Server, vendor([vendor]), model([model]), serial([serial]) in slot [chassisId]/[slotId] presence: [presence]

Explanation

This fault typically occurs when the Cisco UCS Manager detects a server in a chassis slot that does not match what was previously equipped in the slot.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the previous server was intentionally removed and a new one inserted, reacknowledge the server.

Step 2   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: server-moved
mibFaultCode: 156
```

```
mibFaultName: fltFabricComputeSlotEpMisplacedInChassisSlot
moClass: fabric:ComputeSlotEp
Type: equipment
```

fltFabricComputeSlotEpServerIdentificationProblem

Fault Code:F0157

Message

Problem identifying server in slot [chassisId]/[slotId]

Explanation

This fault typically occurs when the Cisco UCS Manager encountered a problem identifying the server in a chassis slot.

Recommended Action

If you see this fault, take the following actions:

Step 1   Remove and reinsert the server.

Step 2   Reacknowledge the server.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: server-identification-problem

```

fltFabricEthEstcPcEpDown

Fault Code:F0777

Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation

This fault typically occurs when a member-port in a Ethernet port-channel is down.

Recommended Action

If you see this fault, take the following action:

Step 1   Check the link connectivity on the upstream Ethernet switch.

Fault Details

```
Severity: major
Cause: membership-down
mibFaultCode: 777
mibFaultName: fltFabricEthEstcPcEpDown
moClass: fabric:EthEstcPcEp
Type: network
```

fltFabricEthLanPcEpDown

Fault Code:F0727

Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation

This fault typically occurs when a member-port in a Ethernet port-channel is down.

Recommended Action

If you see this fault, take the following action:

Step 1   Check the link connectivity on the upstream Ethernet switch.

Fault Details

```
Severity: major
Cause: membership-down
mibFaultCode: 727
mibFaultName: fltFabricEthLanPcEpDown
moClass: fabric:EthLanPcEp
Type: network
```

fltVnicEtherConfig-failed

Fault Code:F0169

Message

Eth vNIC [name], service profile [name] failed to apply configuration

Explanation

This fault typically occurs when the Cisco UCS Manager could not place the vNIC on the vCon.

Recommended Action

If you see this fault, take the following actions:

Step 1   Verify that the server was successfully discovered.

Step 2   Verify that the correct type of adapters are installed on the server.

Step 3   Confirm that the vCon assignment is correct.

Step 4   If the above steps do not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: configuration-failed
mibFaultCode: 169
mibFaultName: fltVnicEtherConfigFailed
moClass: vnic:Ether
Type: configuration
```

Fabric Extended (FEX)-Related Faults

This section contains faults raised as a result of issues related to a fabric extended module in the Cisco UCS instance.

fltEquipmentFexIdentity

Fault Code:F0703

Message

Fex [id] has a malformed FRU

Explanation

This fault typically occurs when an fex has corrupted or has malformed FRU information.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: 703
mibFaultName: fltEquipmentFexIdentity
moClass: equipment:Fex
Type: equipment
```

fltEquipmentFexIdentity-unestablishable

Fault Code:F0778

Message

Fex [id] has an invalid FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected an unsupported chassis. For example, the model, vendor, or revision is not recognized.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 3   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: identity-unestablishable
mibFaultCode: 778
mibFaultName: fltEquipmentFexIdentityUnestablishable
moClass: equipment:Fex
Type: equipment
```

fltEquipmentFexPost-failure

Fault Code:F0702

Message

fex [id] POST failure

Explanation

This fault typically occurs when the fex encounters errors during the Power On Self Test (POST). The impact of this fault varies depending on what errors were encountered during POST.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the POST results for the fex.In the Cisco UCS Manager GUI, you can access the POST results from the General tab for the fex. In the Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the fex.

Step 3   Reboot the fex.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: 702
mibFaultName: fltEquipmentFexPostFailure
moClass: equipment:Fex
Type: equipment
```

Fabric Interconnect-Related Faults

This section contains faults raised as a result of issues with a fabric interconnect.

fltEtherSwitchIntFIoSatellite-wiring-numbers-unexpected

Fault Code:F0440

Message

Chassis discovery policy conflict: Link IOM [chassisId]/[slotId]/[portId] to fabric interconnect [switchId]:[peerSlotId]/[peerPortId] not configured

Explanation

Chassis discovery policy conflict with present iom uplinksCisco UCS Manager raises this fault when any of the following scenario occur:

- UCSM detects number of present IOM uplinks are less than that defined in Chassis discovery policy link-action

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure that number of present IOM uplinks are at least same as that defined in chassis discovery policy link-action. Configure corresponding sever ports.

Step 3   Re-acknowledge the chassis to acknowledge the mismatched number of present links.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: info
Cause: unexpected-number-of-links
mibFaultCode: 440
mibFaultName: fltEtherSwitchIntFIoSatelliteWiringNumbersUnexpected
moClass: ether:SwitchIntFIo
Type: connectivity
```

fltEtherSwitchIntFIoSatellite-wiring-problem

Fault Code:F0368

Message

Invalid connection between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation

There is a satellite wiring problem on network facing interface of IO-moduleThe Cisco UCS Manager raises this fault when any of the following scenario occur:

- The UCSM detects that at least one IOM uplink is misconnected to one of the (fabric interconnect) switch port

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify the fabric interconnect-chassis topology. Make sure each IO Module is connected to only one fabric interconnect

Step 3   Ensure that the links are plugged in properly and re-acknowledge the chassis.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: info
Cause: satellite-mis-connected
mibFaultCode: 368
mibFaultName: fltEtherSwitchIntFIoSatelliteWiringProblem
moClass: ether:SwitchIntFIo
Type: connectivity
```

fltExtmgmtIfMgmtifdown

Fault Code:F0736

Message

Management interface on Fabric Interconnect [id] is [operState]

Explanation

External management interface on fabric interconnect is operationally down.The Cisco UCS Manager raises this fault when any of the following scenario occur:

- Endpoint(switch/fabric interconnect) reports that operational state of external management interface is down.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the state transitions of external management interface on fabric interconnect. Check the link connectivity

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

fltNetworkElementInoperable

Fault Code:F0291

Message

Fabric Interconnect [id] operability: [operability]

Explanation

The IO fabric interconnect is inoperable. The Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The switch cluster controller reports that the membership state of the fabric interconnect is down.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure that both the fabric interconnects in the HA cluster are running the same switch software versions.

Step 3   Verify that the fabric interconnect is running the switch software version compatible to the UCS Manager software version.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fibre Channel-Related Faults

This section contains the following faults raised as a result of issues with the Fibre Channel configuration for a vNIC.

fltVnicFcConfig-failed

Fault Code:F0170

Message

FC vHBA [name], service profile [name] failed to apply configuration

Explanation

This fault typically occurs when the Cisco UCS Manager could not place the vHBA on the vCon.

Recommended Action

If you see this fault, take the following actions:

Step 1   Verify that the server was successfully discovered.

Step 2   Verify that the correct type of adapters are installed on the server.

Step 3   Confirm that the vCon assignment is correct.

Step 4   If the above steps do not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: configuration-failed
mibFaultCode: 170
mibFaultName: fltVnicFcConfigFailed
moClass: vnic:Fc
Type: configuration
```

Firmware-Related Faults

This section contains faults raised as a result of issues related to a firmware upgrade or to running firmware on a component in the Cisco UCS instance.

fltEquipmentIOCardAutoUpgradingFirmware

Fault Code:F0435

Message

IOM [chassisId]/[id] ([switchId]) is auto upgrading firmware

Explanation

This fault typically occurs when an I/O module is auto upgrading.

Recommended Action

If you see this fault, take the following actions:

Step 1   If IOM version and switch version are not the same, then wait for some time for auto-upgarde to complete

Step 2   Auto-upgarde happens when IOM version is no longer compatible with Switch version.

Step 3   Fault will be cleared automatically when IOM upgrade is completed.

Step 4   If you see the fault even after IOM Overall Status changes to operabale, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: auto-firmware-upgrade
mibFaultCode: 435
mibFaultName: fltEquipmentIOCardAutoUpgradingFirmware
moClass: equipment:IOCard
Type: connectivity
```

fltEquipmentIOCardFirmwareUpgrade

Fault Code:F0398

Message

Chassis controller in IOM [chassisId]/[id] ([switchId]) firmware upgrade problem: [upgradeStatus]

Explanation

This fault typically occurs when an IOM upgrade fails.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check FSM status under IOM and check if the FSM upgarde was completed successfully or failed.

Step 2   If FSM failed, then look for the error message in the FSM.

Step 3   If the error message is self-explanatory, eg: No connection to end point or link down etc, check the physical connectivity.

Step 4   If the fault persists, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: firmware-upgrade-problem
mibFaultCode: 398
mibFaultName: fltEquipmentIOCardFirmwareUpgrade
```

```
moClass: equipment:IOCard
Type: equipment
```

fltFirmwareBootUnitCantBoot

Fault Code:F0471

Message

unable to boot the startup image. End point booted with backup image

Explanation

This fault typically occurs when the startup image is corrupted/invalid and end point cannot boot from startup image.

Recommended Action

If you see this fault, take the following actions:

Step 1   Go to FSM tab for the end point on which the fault is raised and check for error description.

Step 2   If FSM failed, then look for the error message in the FSM.

Step 3   Error message usually tells why end point was not able to boot the startup image. Eg: Something like Bad-Image or checksum failed etc.

Step 4   If the fault persists, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: image-cannot-boot
mibFaultCode: 471
mibFaultName: fltFirmwareBootUnitCantBoot
moClass: firmware:BootUnit
Type: management
```

fltFirmwarePackItemImageMissing

Fault Code:F0436

Message

[type] image with vendor [hwVendor], model [hwModel] and version [version] is deleted

Explanation

This fault typically occurs when the image the pack item is refering to is not present.

Recommended Action

If you see this fault, take the following actions:

Step 1   Go to Firmware Management-Images tab in GUI and check if the image which is reported as missing is available or not.

Step 2   If Image is present, check for model and vendor of the image by selecting the image.

Step 3   If the image for specified model and vendor is not present, then download that image or bundle from cisco

Step 4   If the image is present and the fault persists, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: image-deleted
mibFaultCode: 436
mibFaultName: fltFirmwarePackItemImageMissing
moClass: firmware:PackItem
Type: management
```

fltFirmwareUpdatableImageUnusable

Fault Code:F0470

Message

backup image is unusable. reason: [operStateQual]

Explanation

This fault typically occurs when the backup image is unusable.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check out the reason specified for the backup image unusable.

Step 2   If it is bad-image/corrupted-image, try downloading the image again from Cisco site..

Step 3   If the image is present and the fault persists, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: image-unusable
mibFaultCode: 470
mibFaultName: fltFirmwareUpdatableImageUnusable
moClass: firmware:Updatable
Type: management
```

I/O Module-Related Faults

This section contains faults raised as a result of issues related to an I/O module in the Cisco UCS instance.

fltEquipmentIOCardIdentity

Fault Code:F0405

Message

[side] IOM [chassisId]/[id] ([switchId]) has a malformed FRU

Explanation

This fault typically occurs when an I/O module has corrupted or has malformed FRU information.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: 405
mibFaultName: fltEquipmentIOCardIdentity
moClass: equipment:IOCard
Type: equipment
```

fltEquipmentIOCardInaccessible

Fault Code:F0478

Message

[side] IOM [chassisId]/[id] ([switchId]) is inaccessible

Explanation

This fault typically occurs because an I/O module has lost connection to the fabric interconnects. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.

Step 3   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: equipment-inaccessible
mibFaultCode: 478
mibFaultName: fltEquipmentIOCardInaccessible
moClass: equipment:IOCard
Type: equipment
```

fltEquipmentIOCardPeerDisconnected

Fault Code:F0403

Message

IOM [chassisId]/[id] ([switchId]) peer connectivity: [peerCommStatus]

Explanation

This fault typically occurs when an I/O module is unable to communicate with its peer I/O module.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.

Step 3   If the fault does not clear after a few minutes, remove and reinsert the I/O module.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: equipment-disconnected
mibFaultCode: 403
mibFaultName: fltEquipmentIOCardPeerDisconnected
moClass: equipment:IOCard
Type: connectivity
```

fltEquipmentIOCardPost-failure

Fault Code:F0481

Message

[side] IOM [chassisId]/[id] ([switchId]) POST failure

Explanation

This fault typically occurs when the I/O module encounters errors during the Power On Self Test (POST). The impact of this fault varies depending on what errors were encountered during POST.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the POST results for the I/O module.In Cisco UCS Manager GUI, you can access the POST results from the General tab for the I/O module. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the I/O module.

Step 3   Reboot the I/O module.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support**command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: 481
mibFaultName: fltEquipmentIOCardPostFailure
moClass: equipment:IOCard
Type: equipment
```

fltEquipmentIOCardRemoved

Fault Code:F0376

Message

[side] IOM [chassisId]/[id] ([switchId]) is removed

Explanation

This fault typically occurs because an I/O module is removed from the chassis. In a cluster configuration, the chassis fails over to the other I/O module. For a standalone configuration, the chassis associated with the I/O module loses network connectivity. This is a critical fault because it can result in the loss of network connectivity and disrupt data traffic through the I/O module.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Re-insert the I/O module and configure the fabric-interconnect ports connected to it as server ports and wait a few minutes to see if the fault clears.

Step 3   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: equipment-removed
mibFaultCode: 376
mibFaultName: fltEquipmentIOCardRemoved
moClass: equipment:IOCard
Type: equipment
```

fltEquipmentIOCardThermalProblem

Fault Code:F0379

Message

[side] IOM [chassisId]/[id] ([switchId]) operState: [operState]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: 379
mibFaultName: fltEquipmentIOCardThermalProblem
moClass: equipment:IOCard
Type: environmental
```

fltEquipmentIOCardThermalThresholdCritical

Fault Code:F0730

Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: 730
mibFaultName: fltEquipmentIOCardThermalThresholdCritical
moClass: equipment:IOCard
Type: environmental
```

fltEquipmentIOCardThermalThresholdNonCritical

Fault Code:F0729

Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: thermal-problem
mibFaultCode: 729
mibFaultName: fltEquipmentIOCardThermalThresholdNonCritical
moClass: equipment:IOCard
Type: environmental
```

fltEquipmentIOCardThermalThresholdNonRecoverable

Fault Code:F0731

Message

[side] IOM [chassisId]/[id] ([switchId]) temperature: [thermal]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: thermal-problem
mibFaultCode: 731
mibFaultName: fltEquipmentIOCardThermalThresholdNonRecoverable
moClass: equipment:IOCard
Type: environmental
```

fltEquipmentIOCardUnacknowledged

Fault Code:F0402

Message

IOM [chassisId]/[id] ([switchId]) connectivity configuration: [configState]

Explanation

This fault typically occurs when an I/O module is unacknowledged.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the state of the I/O module links.

Step 3   Reacknowledge the chassis.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: equipment-unacknowledged
mibFaultCode: 402
mibFaultName: fltEquipmentIOCardUnacknowledged
moClass: equipment:IOCard
Type: connectivity
```

fltEquipmentIOCardUnsupportedConnectivity

Fault Code:F0401

Message

IOM [chassisId]/[id] ([switchId]) current connectivity does not match discovery policy: [configState]

Explanation

This fault typically occurs when the current connectivity for an I/O module does not match the configuration in the chassis discovery policy.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the correct number of links are configured in the chassis discovery policy.

Step 3   Check the state of the I/O module links.

Step 4   Reacknowledge the chassis.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: unsupported-connectivity-configuration
mibFaultCode: 401
mibFaultName: fltEquipmentIOCardUnsupportedConnectivity
moClass: equipment:IOCard
Type: connectivity
```

License-Related Faults

This section contains faults raised as a result of issues related to licensing.

fltLicenseFileBadLicenseFile

Fault Code:F0677

Message

license file [name] on fabric-interconnect [scope] can not be installed

Explanation

Installation of a license file on this fabric interconnect has failed.This fault typically occurs if license file is badly formatted or does not have a matching server host ID with fabric interconnect.

Recommended Action

If you see this fault, take the following actions:

Step 1   In the Cisco UCS Manager CLI, check the server host IDs for both fabric interconnects. You can access the host ID information by issuing **show server-host-id detail** command under the license scope.

Step 2   Match the host-IDs with the contents in license file procured, if it matches, execute the **show tech-support** command and contact Cisco Technical Support.

Step 3   If it does not match, contact Cisco Technical Support for the correct license file.

Fault Details

```
Severity: critical
Cause: license-file-uninstallable
mibFaultCode: 677
mibFaultName: fltLicenseFileBadLicenseFile
moClass: license:File
Type: management
```

fltLicenseFileFileNotDeleted

Fault Code:F0678

Message

license file [name] from fabric-interconnect [scope] could not be deleted

Explanation

Deletion of a license file on this fabric interconnect has failed.This fault typically occurs if license framework is not able to delete a file.

Recommended Action

If you see this fault, take the following actions:

Step 1   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: license-file-not-deleted
mibFaultCode: 678
mibFaultName: fltLicenseFileFileNotDeleted
moClass: license:File
Type: management
```

fltLicenseInstanceGracePeriodWarning1

Fault Code:F0670

Message

license for [feature] on fabric-interconnect [scope] has entered into the grace period.

Explanation

The fabric interconnect is running at least one port in the grace-period.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2   Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: license-graceperiod-entered
mibFaultCode: 670
mibFaultName: fltLicenseInstanceGracePeriodWarning1
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning2

Fault Code:F0671

Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 10 days

Explanation

The fabric interconnect is running atleast one port in grace-period for more than 10 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 10 days.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2   Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: license-graceperiod-10days
mibFaultCode: 671
mibFaultName: fltLicenseInstanceGracePeriodWarning2
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning3

Fault Code:F0672

Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 30 days

Explanation

The fabric interconnect is running at least one port in grace-period for more than 30 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 30 days.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2 Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: license-graceperiod-30days
mibFaultCode: 672
mibFaultName: fltLicenseInstanceGracePeriodWarning3
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning4

Fault Code:F0673

Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 60 days

Explanation

The fabric interconnect is running at least one port in grace-period for more than 60 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 60 days.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2   Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: license-graceperiod-60days
mibFaultCode: 673
mibFaultName: fltLicenseInstanceGracePeriodWarning4
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning5

Fault Code:F0674

Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 90 days

Explanation

The fabric interconnect is running at least one port in grace-period for more than 90 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 90 days.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2   Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: license-graceperiod-90days
mibFaultCode: 674
mibFaultName: fltLicenseInstanceGracePeriodWarning5
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning6

Fault Code:F0675

Message

license for [feature] on fabric-interconnect [scope] is running in the grace period for more than 119 days

Explanation

The fabric interconnect is running at least one port in grace-period for more than 119 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 119 days.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2   Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: license-graceperiod-119days
mibFaultCode: 675
mibFaultName: fltLicenseInstanceGracePeriodWarning6
moClass: license:Instance
Type: management
```

fltLicenseInstanceGracePeriodWarning7

Fault Code:F0676

Message

Grace period for [feature] on fabric-interconnect [scope] is expired. Please acquire a license for the same.

Explanation

The fabric interconnect is running atleast one port in grace-period for more than 120 days.This fault typically occurs if one or more ports on the fixed module are enabled after consuming all default licenses and system is in this state for more than 120 days. This puts the system licensing state as expired.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, check the number of ports enabled on Fixed module.

Step 2 Check the number of licenses installed and consumed on each fabric interconnect.In the Cisco UCS Manager GUI, you can access the licensing information from the Admin tab for the fabric interconnect. In the Cisco UCS Manager CLI, you can access the licensing information by issuing **show usage detail** command under the license scope.

Step 3 Execute the **show tech-support** command and contact Cisco Technical Support immediately to procure more licenses.

Step 4 **Disable any additional ports to bring the number of enabled ports down to the number of total licenses.**

Fault Details

```
Severity: critical
Cause: license-graceperiod-expired
mibFaultCode: 676
mibFaultName: fltLicenseInstanceGracePeriodWarning7
moClass: license:Instance
Type: management
```

Link-Related Faults

This section contains faults raised as a result of issues related to the links between a chassis or I/O module and a fabric interconnect.

fltEtherSwitchIntFIoSatellite-connection-absent

Fault Code:F0367

Message

No link between IOM port [chassisId]/[slotId]/[portId] and fabric interconnect [switchId]:[peerSlotId]/[peerPortId]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

fltMemoryUnitDegraded

Fault Code:F0184

Message

DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]

Explanation

The DIMM is in a degraded operability stateThe Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The UCSM marks a memory unit (DIMM) as degraded operability when an excessive number of correctable ECC errors are reported by BIOS.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Monitor the error statistics on the degraded DIMM through the GUI tab. If the high number of errors persists, there is a high possibilty of the DIMM becoming inoperable.

Step 3   The fault indicates that the DIMM is operating in a degraded state. If the DIMM becomes inoperable, replace the DIMM.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
        Severity: minor
        Cause: equipment-degraded
        mibFaultCode: 184
        mibFaultName: fltMemoryUnitDegraded
        moClass: memory:Unit
        Type: equipment
```

fltMemoryUnitIdentity-unestablishable

Fault Code:F0502

Message

DIMM [location] on server [chassisId]/[slotId] has an invalid FRUDIMM [location] on server [id] has an invalid FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected unsupported DIMM in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 3   If the above actions did not resolve the issue, you may have unsupported DIMMs or DIMM configuration in the server. Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: identity-unestablishable
mibFaultCode: 502
mibFaultName: fltMemoryUnitIdentityUnestablishable
moClass: memory:Unit
Type: equipment
```

fltMemoryUnitInoperable

Fault Code:F0185

Message

DIMM [location] on server [chassisId]/[slotId] operability: [operability]DIMM [location] on server [id] operability: [operability]

Explanation

This fault typically occurs because an above threshold number of correctable or uncorrectable errors occurred on a DIMM. The DIMM may be inoperable.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   If the SEL is enabled, look at the SEL statistics on the DIMM to determine which threshold was crossed.

Step 3   If necessary, replace the DIMM.

Step 4   If the above actions do not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: 185
mibFaultName: fltMemoryUnitInoperable

Pin Group-Related Faults

This section contains faults raised as a result of issues related to a pin groups in the Cisco UCS instance.

fltFabricLanPinGroupEmpty

Fault Code:F0621

Message

LAN Pin Group [name] is empty

Explanation

This fault typically occurs when a LAN Pin Group does not contain any targets.

Recommended Action

If you see this fault, take the following action:

Step 1   Add a target to the LAN Pin Group.

Fault Details

```
Severity: minor
Cause: empty-pin-group
```

```
mibFaultCode: 621
mibFaultName: fltFabricLanPinGroupEmpty
moClass: fabric:LanPinGroup
Type: server
```

fltFabricSanPinGroupEmpty

Fault Code:F0622

Message

SAN Pin Group [name] is empty

Explanation

This fault typically occurs when a SAN Pin Group does not contain any targets.

Recommended Action

If you see this fault, take the following action:

Step 1 Add a target to the SAN Pin Group.

Fault Details

```
Severity: minor
Cause: empty-pin-group
mibFaultCode: 622
mibFaultName: fltFabricSanPinGroupEmpty
moClass: fabric:SanPinGroup
Type: server
```

Pool-Related Faults

This section contains faults raised as a result of issues related to a server pool, UUID suffix pool, or other pool in the Cisco UCS instance.

fltComputePoolEmpty

Fault Code:F0463

Message

server pool [name] is empty

Explanation

This fault typically occurs when the selected server pool does not contain any servers.

Recommended Action

If you see this fault, take the following actions:

Step 1 Verify the qualifier settings in the server pool policy qualifications. If the policy was modified after the server was discovered, reacknowledge the server.

Step 2 Manually associate the service profile with a server.

Step 3 If the server pool is not used, ignore the fault.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

Severity: minor
Cause: empty-pool
mibFaultCode: 463
mibFaultName: fltComputePoolEmpty
moClass: compute:Pool
Type: server

fltFcpoolInitiatorsEmpty

Fault Code:F0476

Message

FC pool [purpose] [name] is empty

Explanation

This fault typically occurs when a WWN pool does not contain any WWNs.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the pool is in use, add a block of WWNs to the pool.

Step 2 If the pool is not in use, ignore the fault.

Fault Details

Severity: minor
Cause: empty-pool
mibFaultCode: 476
mibFaultName: fltFcpoolInitiatorsEmpty
moClass: fcpool:Initiators
Type: server

fltIppoolPoolEmpty

Fault Code:F0465

Message

IP pool [name] is empty

Explanation

This fault typically occurs when an IP address pool does not contain any IP addresses.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the pool is in use, add a block of IP addresses to the pool.

Step 2   If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: 465
mibFaultName: fltIppoolPoolEmpty
moClass: ippool:Pool
Type: server
```

fltMacpoolPoolEmpty

Fault Code:F0466

Message

MAC pool [name] is empty

Explanation

This fault typically occurs when a MAC address pool does not contain any MAC addresses.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the pool is in use, add a block of MAC addresses to the pool.

Step 2   If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: 466
mibFaultName: fltMacpoolPoolEmpty
moClass: macpool:Pool
Type: server
```

fltUuidpoolPoolEmpty

Fault Code:F0464

Message

UUID suffix pool [name] is empty

Explanation

This fault typically occurs when a UUID suffix pool does not contain any UUID suffixes.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the pool is in use, add a block of UUID suffixes to the pool.

Step 2   If the pool is not in use, ignore the fault.

Fault Details

```
Severity: minor
Cause: empty-pool
mibFaultCode: 464
mibFaultName: fltUuidpoolPoolEmpty
moClass: uuidpool:Pool
Type: server
```

Port-Related Faults

This section contains faults raised as a result of issues with one or more ports in a Cisco UCS instance.

fltPortPIoFailed

Fault Code:F0277

Message

[transport] port [portId] on chassis [id] oper state: [operState], reason: [stateQual][transport] port [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation

This fault is raised on the fabric interconnect port, the server facing ports on the IOM or the FEX module when the system detects an indeterminate fault.

Recommended Action

If you see this fault, take the following actions:Execute the **show tech-support** command for UCSM and the chassis or FEX module on which fault is reported and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: port-failed
```

```
mibFaultCode: 277
mibFaultName: fltPortPIoFailed
moClass: port:PIo

Message

[transport] port [portId] on chassis [id] oper state: [operState], reason: hardware-failure[transport] port [portId] on fabric interconnect [id] oper state: [operState], reason: hardware-failure

Explanation

This fault is raised on the fabric interconnect port, ports on the IOM or the FEX module when the system detects a hardware failure.

Recommended Action

If you see this fault, take the following actions: Execute the **show tech-support detai**l command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: port-failed
mibFaultCode: 278
mibFaultName: fltPortPIoHardwareFailure
moClass: port:PIo
Type: network
```

fltPortPIoInvalid-sfp

Fault Code:F0713

Message

[transport] port [portId] on chassis [id] role : [ifRole] transceiver type:[xcvrType][transport] port [portId] on fabric interconnect [id] role : [ifRole] transceiver type:[xcvrType]

Explanation

This fault is raised against a Fabric Interconnect port,network facing IOM port or a FEX module port if an unsupported transceiver type is inserted in it.The port cannot be used when it has an unsupported transceiver.

Recommended Action

If you see this fault, take the following actions:Replace with a supported SFP type.Refer to the CCO documentation for a list of supported SFPs.

Fault Details

```
Severity: major
Cause: unsupported-transceiver
mibFaultCode: 713
mibFaultName: fltPortPIoInvalidSfp
```

Type: network

Port Channel-Related Faults

This section contains faults raised as a result of issues with one or more port channels in a Cisco UCS instance.

fltFabricFcSanPcEpIncompatibleSpeed

Fault Code:F0734

Message

Member [slotId]/[portId] cannot be added to SAN Port-Channel [portId] on fabric interconnect [id], reason: [membership]

Explanation

This fault typically occurs when the maximum supported FC speed of the port in the FC port-channel is incompatible with the FC port-channel admin speed.

Recommended Action

If you see this fault, take the following action:

Step 1   Change the admin speed of the port-channel.

or

Step 2   Replace the GEM with a one which suits the admin-speed of the port-channel.

Fault Details

```
Severity: major
Cause: incompatible-speed
mibFaultCode: 734
mibFaultName: fltFabricFcSanPcEpIncompatibleSpeed
moClass: fabric:FcSanPcEp
Type: network
```

fltFabricFcSanPcIncompatibleSpeed

Fault Code:F0735

Message

Cannot set admin speed to the requested value, Speed incompatible with member ports in the port-channel

Explanation

This fault typically occurs when the maximum supported FC speed of the port in the FC port-channel is incompatible with the FC port-channel admin speed.

Recommended Action

If you see this fault, take the following action:

Step 1 Change the admin speed of the port-channel.

or

Step 2 Replace the GEM with a one which suits the admin-speed of the port-channel.

Fault Details

```
Severity: major
Cause: incompatible-speed
mibFaultCode: 735
mibFaultName: fltFabricFcSanPcIncompatibleSpeed
moClass: fabric:FcSanPc
Type: network
```

Power Supply-Related Faults

This section contains faults raised as a result of issues related to a power supply unit in the Cisco UCS instance.

fltEquipmentPsuIdentity

Fault Code:F0407

Message

Power supply [id] on chassis [id] has a malformed FRUPower supply [id] on server [id] has a malformed FRU

Explanation

This fault typically occurs when a power supply unit has corrupted or has malformed FRU information.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fru-problem
mibFaultCode: 407
mibFaultName: fltEquipmentPsuIdentity
moClass: equipment:Psu
Type: equipment
```

fltEquipmentPsuInoperable

Fault Code:F0374

Message

Power supply [id] in chassis [id] operability: [operability]Power supply [id] in fabric interconnect [id] operability: [operability]Power supply [id] in fex [id] operability: [operability]Power supply [id] in server [id] operability: [operability]

Explanation

This fault typically occurs when the Cisco UCS Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a fex. For example, the PSU is not functional.

Recommended Action

If you see this fault, take the following actions:

Step 1   Verify that the power cord is properly connected to the PSU and the power source.

Step 2   Verify that the power source is 220 volts.

Step 3   Verify that the PSU is properly installed in the chassis or fabric interconnect.

Step 4   Remove the PSU and reinstall it.

Step 5   Replace the PSU.

Step 6   If the above actions did not resolve the issue, note down the type of PSU, execute the **show tech-support** command, and contact Cisco Technical Support.

Fault Details

```
Severity: major

fltEquipmentPsuMissing

Fault Code:F0378

Message

Power supply [id] in chassis [id] presence: [presence]Power supply [id] in fabric interconnect [id] presence: [presence]Power supply [id] in fex [id] presence: [presence]Power supply [id] in server [id] presence: [presence]

Explanation

This fault typically occurs when the Cisco UCS Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a fex. For example, the PSU is missing.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 If the power supply unit is physically present in the slot, remove and then reinsert it.

Step 3 If the power supply unit is not physically present in the slot, reinsert it.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

```

fltEquipmentPsuPerfThresholdNonCritical

Fault Code:F0392

Message

Power supply [id] in chassis [id] output power: [perf]Power supply [id] in fabric interconnect [id] output power: [perf]Power supply [id] in server [id] output power: [perf]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

fltEquipmentPsuPowerSupplyProblem

Fault Code:F0369

Message

Power supply [id] in chassis [id] power: [power]Power supply [id] in fabric interconnect [id] power: [power]Power supply [id] in fex [id] power: [power]Power supply [id] in server [id] power: [power]

Explanation

This fault typically occurs when the Cisco UCS Manager detects a problem with a power supply unit in a chassis, fabric interconnect or a fex. For example, the PSU is not functional.

Recommended Action

If you see this fault, take the following actions:

Step 1 Verify that the power cord is properly connected to the PSU and the power source.

Step 2 Verify that the power source is 220 volts.

Step 3 Verify that the PSU is properly installed in the chassis or fabric interconnect.

Step 4 Remove the PSU and reinstall it.

Step 5 Replace the PSU.

Step 6   If the above actions did not resolve the issue, note down the type of PSU, execute the **show tech-support** command, and contact Cisco Technical Support.

fltFabricExternalPcDown

Fault Code:F0282

Message

[type] port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual][type] port-channel [portId] on fabric interconnect [id] oper state: [operState], reason: [stateQual]

Explanation

The fabric port-channel operationally down.The Cisco UCS Manager raises this fault when any of the following scenarios occur:

- Endpoint(switch/fabric interconnect) reports that the fabric port channel operational state is down.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Verify that the member ports in the fabric port channel are admin up and operational. Check the link connectivity.

Step 3 If connectivity seems correct, check the operational states on the peer switch ports of the port channels members.

Step 4 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: operational-state-down
mibFaultCode: 282
mibFaultName: fltFabricExternalPcDown
moClass: fabric:ExternalPc
Type: network
```

fltFabricFcSanPcEpDown

Fault Code:F0728

Message

[type] Member [slotId]/[portId] of Port-Channel [portId] on fabric interconnect [id] is down, membership: [membership]

Explanation

This fault typically occurs when a member-port in a FC port-channel is down .

Recommended Action

If you see this fault, take the following action:

Step 1   Check the link connectivity on the upstream FC switch.

Fault Details

```
Severity: major
Cause: membership-down
mibFaultCode: 728
mibFaultName: fltFabricFcSanPcEpDown
moClass: fabric:FcSanPcEp
Type: network
```

Processor-Related Faults

This section contains faults raised as a result of issues with a server processor.

fltProcessorUnitIdentity-unestablishable

Fault Code:F0801

Message

Processor [id] on server [chassisId]/[slotId] has an invalid FRUProcessor [id] on server [id] has an invalid FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected unsupported CPU in the server. For example, the model, vendor, or revision is not recognized.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the capability catalog in the Cisco UCS Manager is up-to-date. If necessary, update the catalog.

Step 3   If the above actions did not resolve the issue, you may have unsupported CPU configuration in the server. Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: identity-unestablishable
mibFaultCode: 801
mibFaultName: fltProcessorUnitIdentityUnestablishable
moClass: processor:Unit
Type: equipment
```

fltProcessorUnitInoperable

Fault Code:F0174

Message

Processor [id] on server [chassisId]/[slotId] operability: [operability]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: 174
mibFaultName: fltProcessorUnitInoperable
moClass: processor:Unit
Type: equipment
```

fltProcessorUnitThermalNonCritical

Fault Code:F0175

Message

Processor [id] on server [chassisId]/[slotId] temperature: [thermal]Processor [id] on server [id] temperature: [thermal]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: thermal-problem

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: voltage-problem
mibFaultCode: 178
mibFaultName: fltProcessorUnitVoltageThresholdNonCritical
moClass: processor:Unit
Type: environmental
```

fltProcessorUnitVoltageThresholdNonRecoverable

Fault Code:F0180

Message

Processor [id] on server [chassisId]/[slotId] voltage: [voltage]

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: voltage-problem
mibFaultCode: 180
mibFaultName: fltProcessorUnitVoltageThresholdNonRecoverable
moClass: processor:Unit
Type: environmental
```

Server-Related Faults

This section contains faults raised as a result of issues related to a server.

fltComputeBoardCmosVoltageThresholdCritical

Fault Code:F0424

Message

Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [id] is [cmosVoltage]

Explanation

This fault is raised when CMOS battery voltage has gone lower than normal operating range. This could impact clock and other CMOS settings.

Recommended Action

If you see this fault, take the following actions:Replace the battery.

Fault Details

    Severity: minor
    Cause: voltage-problem
    mibFaultCode: 424
    mibFaultName: fltComputeBoardCmosVoltageThresholdCritical
    moClass: compute:Board
    Type: environmental

fltComputeBoardCmosVoltageThresholdNonRecoverable

Fault Code:F0425

Message

Possible loss of CMOS settings: CMOS battery voltage on server [chassisId]/[slotId] is [cmosVoltage]Possible loss of CMOS settings: CMOS battery voltage on server [id] is [cmosVoltage]

Explanation

This fault is raised when CMOS battery voltage has gone quite low and is unlikely to recover. This will impact clock and other CMOS settings.

Recommended Action

If you see this fault, take the following actions:Replace the battery.

Fault Details

    Severity: major
    Cause: voltage-problem
    mibFaultCode: 425
    mibFaultName: fltComputeBoardCmosVoltageThresholdNonRecoverable
    moClass: compute:Board
    Type: environmental

fltComputeBoardPowerError

Fault Code:F0310

Message

Motherboard of server [chassisId]/[slotId] (service profile: [assignedToDn]) power: [operPower]Motherboard of server [id] (service profile: [assignedToDn]) power: [operPower]

Explanation

This fault typically occurs when the server power sensors have detected a problem.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure that the server is correctly installed in the chassis and that all cables are secure.

Step 3   If you reinstalled the server, reacknowledge it.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: power-problem
mibFaultCode: 310
mibFaultName: fltComputeBoardPowerError
moClass: compute:Board
Type: environmental
```

fltComputeIOHubThermalNonCritical

Fault Code:F0538

Message

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

Explanation

This fault is raised when the IO controller temperature is outside the upper or lower non-critical threshold.

Recommended Action

If you see this fault, take the following actions:Monitor other environmental events related to this server and ensure the temperature ranges are within recommended ranges.

Fault Details

```
Severity: minor
Cause: thermal-problem
mibFaultCode: 538
mibFaultName: fltComputeIOHubThermalNonCritical
moClass: compute:IOHub
Type: environmental
```

fltComputeIOHubThermalThresholdCritical

Fault Code:F0539

Message

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

Explanation

This fault is raised when the IO controller temperature is outside the upper or lower critical threshold.

Recommended Action

If you see this fault, take the following actions:Monitor other environmental events related to this server and ensure the temperature ranges are within recommended ranges. Consider turning off the server for a while if possible.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: 539
mibFaultName: fltComputeIOHubThermalThresholdCritical
moClass: compute:IOHub
Type: environmental
```

fltComputeIOHubThermalThresholdNonRecoverable

Fault Code:F0540

Message

IO Hub on server [chassisId]/[slotId] temperature: [thermal]

Explanation

This fault is raised when the IO controller temperature is outside the recoverable range of operation.

Recommended Action

If you see this fault, take the following actions:Shutdown server immediately. Contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: thermal-problem
mibFaultCode: 540
mibFaultName: fltComputeIOHubThermalThresholdNonRecoverable
moClass: compute:IOHub
Type: environmental
```

fltComputePhysicalAssignedInaccessible

Fault Code:F0322

Message

Server [id] (service profile: [assignedToDn]) inaccessibleServer [chassisId]/[slotId] (service profile: [assignedToDn]) inaccessible

Explanation

This fault typically occurs when the server, which is associated with a service profile, has lost connection to the fabric interconnects. This fault occurs if there are communication issues between CIMC and the fabric interconnects.

Recommended Action

If you see this fault, take the following actions:

Step 1   Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.

Step 2   If the fault does not clear after a brief time, remove the server and then reinsert it.

Step 3   Reacknowledge the server.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: equipment-inaccessible
mibFaultCode: 322
mibFaultName: fltComputePhysicalAssignedInaccessible
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalAssignedMissing

Fault Code:F0319

Message

Server [id] (service profile: [assignedToDn]) missingServer [chassisId]/[slotId] (service profile: [assignedToDn]) missing

Explanation

This fault typically occurs when the server, which is associated with a service profile, was previously physically inserted in the slot, but cannot be detected by the Cisco UCS Manager.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   If the server is physically present in the slot, remove and then reinsert it.

Step 3   If the server is not physically present in the slot, reinsert it.

Step 4   Reacknowledge the server.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-missing
mibFaultCode: 319
```

```
mibFaultName: fltComputePhysicalAssignedMissing
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalAssociationFailed

Fault Code:F0315

Message

Service profile [assignedToDn] failed to associate with server [id]Service profile [assignedToDn] failed to associate with server [chassisId]/[slotId]

Explanation

This fault typically occurs for one of the following reasons:

- The service profile could not be associated with the server.

- The server is down.

- The data path is not working.

- The Cisco UCS Manager cannot communicate with one or more of the fabric interconnect, the server, or a component on the server.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the FSM tab and the current state of the server and any FSM operations.

Step 3   If the server is stuck in an inappropriate state, such as booting, power-cycle the server.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: association-failed
mibFaultCode: 315
mibFaultName: fltComputePhysicalAssociationFailed
moClass: compute:Physical
Type: configuration
```

fltComputePhysicalBiosPostTimeout

Fault Code:F0313

Message

Server [id] (service profile: [assignedToDn]) BIOS failed power-on self testServer [chassisId]/[slotId] (service profile: [assignedToDn]) BIOS failed power-on self test

Explanation

This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the POST results for the server.In the Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In the Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.

Step 3   Reacknowledge the server.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: equipment-inoperable
mibFaultCode: 313
mibFaultName: fltComputePhysicalBiosPostTimeout
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalDiscoveryFailed

Fault Code:F0314

Message

Server [id] (service profile: [assignedToDn]) discovery: [discovery]Server [chassisId]/[slotId] (service profile: [assignedToDn]) discovery: [discovery]

Explanation

This fault typically occurs for one of the following reasons:

- The shallow discovery that occurs when the server associated with the service profile failed.

- The server is down.

- The data path is not working.

- Cisco UCS Manager cannot communicate with the BMC on the server.

- The server cannot communicate with the fabric interconnect.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the FSM tab and the current state of the server and any FSM operations.

Step 3   Check the error descriptions and see if any server components indicate a failure.

Step 4   If the server or a server component has failed, do the following:

   a.   Check the operational state of the server.

   b.   If the server is not operable, re-acknowledge the server.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: discovery-failed
mibFaultCode: 314
mibFaultName: fltComputePhysicalDiscoveryFailed
moClass: compute:Physical
Type: operational
```

fltComputePhysicalIdentityUnestablishable

Fault Code:F0306

Message

Server [id] (service profile: [assignedToDn]) has an invalid FRUServer [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU

Explanation

This fault typically occurs because the Cisco UCS Manager has detected an unsupported server or CPU.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that a supported server and/or CPU is installed.

Step 3   Verify that the Cisco UCS Manager capability catalog is up-to-date.

Step 4   Reacknowledge the server.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: 306
mibFaultName: fltComputePhysicalIdentityUnestablishable
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalInoperable

Fault Code:F0317

Message

Server [id] (service profile: [assignedToDn]) health: [operability]Server [chassisId]/[slotId] (service profile: [assignedToDn]) health: [operability]

Explanation

This fault typically occurs when the server has encountered a diagnostic failure.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the POST results for the server.In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.

Step 3   Reacknowledge the server.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: 317
mibFaultName: fltComputePhysicalInoperable
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalInsufficientlyEquipped

Fault Code:F0305

Message

Server [id] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adaptersServer [chassisId]/[slotId] (service profile: [assignedToDn]) has insufficient number of DIMMs, CPUs and/or adapters

Explanation

This fault typically occurs because the Cisco UCS Manager has detected that the server has an insufficient number of DIMMs, CPUs and/or adapter.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Verify that the DIMMs are installed in a supported configuration.

Step 3 Verify that an adapter and CPU are installed.

Step 4 Reacknowledge the server.

Step 5 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: insufficiently-equipped
mibFaultCode: 305
mibFaultName: fltComputePhysicalInsufficientlyEquipped
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalPost-failure

Fault Code:F0517

Message

Server [id] POST or diagnostic failureServer [chassisId]/[slotId] POST or diagnostic failure

Explanation

This fault typically occurs when the server has encountered a diagnostic failure or an error during POST.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check the POST results for the server.In Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.

Step 3 Reboot the server.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-problem
mibFaultCode: 517
mibFaultName: fltComputePhysicalPostFailure
moClass: compute:Physical
Type: server
```

fltComputePhysicalPowerProblem

Fault Code:F0311

Message

Server [id] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId] (service profile: [assignedToDn]) oper state: [operState]

Explanation

This fault typically occurs when the server power sensors have detected a problem.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure that the server is correctly installed in the chassis and that all cables are secure.

Step 3   If you reinstalled the server, reacknowledge it.

Step 4   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: major
Cause: power-problem
mibFaultCode: 311
mibFaultName: fltComputePhysicalPowerProblem
moClass: compute:Physical
Type: environmental
```

fltComputePhysicalThermalProblem

Fault Code:F0312

Message

Server [id] (service profile: [assignedToDn]) oper state: [operState]Server [chassisId]/[slotId] (service profile: [assignedToDn]) oper state: [operState]

Explanation

This fault typically occurs when the server thermal sensors have detected a problem.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Make sure that the server fans are working properly.

Step 3 Wait for 24 hours to see if the problem resolves itself.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: thermal-problem
mibFaultCode: 312
mibFaultName: fltComputePhysicalThermalProblem
moClass: compute:Physical
Type: environmental
```

fltComputePhysicalUnassignedInaccessible

Fault Code:F0321

Message

Server [id] (no profile) inaccessibleServer [chassisId]/[slotId] (no profile) inaccessible

Explanation

This fault typically occurs when the server, which is not associated with a service profile, has lost connection to the fabric interconnects. This fault occurs if there are communication issues between CIMC and the fabric interconnects.

Recommended Action

If you see this fault, take the following actions:

Step 1 Wait a few minutes to see if the fault clears. This is typically a temporary issue, and can occur after a firmware upgrade.

Step 2 If the fault does not clear after a brief time, remove the server and then reinsert it.

Step 3 Reacknowledge the server.

Step 4 If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: equipment-inaccessible
mibFaultCode: 321
mibFaultName: fltComputePhysicalUnassignedInaccessible
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalUnassignedMissing

Fault Code:F0318

Message

Server [id] (no profile) missingServer [chassisId]/[slotId] (no profile) missing

Explanation

This fault typically occurs when the server, which is not associated with a service profile, was previously physically inserted in the slot, but cannot be detected by the Cisco UCS Manager.

Recommended Action

If you see this fault, take the following actions:

Step 1	If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.
Step 2	If the server is physically present in the slot, remove and then reinsert it.
Step 3	If the server is not physically present in the slot, reinsert it.
Step 4	Reacknowledge the server.
Step 5	If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: equipment-missing
mibFaultCode: 318
mibFaultName: fltComputePhysicalUnassignedMissing
moClass: compute:Physical
Type: equipment
```

fltComputePhysicalUnidentified

Fault Code:F0320

Message

Server [id] (service profile: [assignedToDn]) has an invalid FRU: [presence]Server [chassisId]/[slotId] (service profile: [assignedToDn]) has an invalid FRU: [presence]

Explanation

This fault typically occurs because the Cisco UCS Manager has detected an unsupported server or CPU.

Recommended Action

If you see this fault, take the following actions:

Step 1	If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that a supported server and/or CPU is installed.

Step 3   Verify that the Cisco UCS Manager capability catalog is up-to-date.

Step 4   Reacknowledge the server.

Step 5   If the above actions did not resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: identity-unestablishable
mibFaultCode: 320
mibFaultName: fltComputePhysicalUnidentified
moClass: compute:Physical
Type: equipment
```

fltComputeRtcBatteryInoperable

Fault Code:F0533

Message

RTC Battery on server [chassisId]/[slotId] operability: [operability]

Explanation

This fault is raised when CMOS battery voltage is below normal operating range. This will impact system clock.

Recommended Action

If you see this fault, take the following actions:Replace the CMOS battery.

Fault Details

```
Severity: major
Cause: equipment-inoperable
mibFaultCode: 533
mibFaultName: fltComputeRtcBatteryInoperable
moClass: compute:RtcBattery
Type: equipment
```

fltMgmtIfMisConnect

Fault Code:F0688

Message

Management Port [id] in server [id] is mis connected

Explanation

This fault occurs on server and fex connectivity change.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check the connectivity between server and fex and if changed by mistake then make it same as before.

Step 2   If intended, then reacknowledge the server.

Step 3   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-misconnected
mibFaultCode: 688
mibFaultName: fltMgmtIfMisConnect
moClass: mgmt:If
Type: operational
```

fltMgmtIfMissing

Fault Code:F0717

Message

Connection to Management Port [id] in server [id] is missing

Explanation

This fault occurs when connectivity betwwen server and fex connectivity is removed.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check the connectivity between server and fex and if changed by mistake then make it the same as before.

Step 2   If intended, then reacknowledge the server.

Step 3   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: link-missing
mibFaultCode: 717
mibFaultName: fltMgmtIfMissing
moClass: mgmt:If
Type: operational
```

fltMgmtIfNew

Fault Code:F0772

Message

New connection discovered on Management Port [id] in server [id]

Explanation

This fault occurs when new connectivity is added betwwen server and fex.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check the connectivity between server and fex and if changed by mistake then make it same as before.

Step 2   If intended, then reacknowledge the server.

Step 3   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: new-link
mibFaultCode: 772
mibFaultName: fltMgmtIfNew
moClass: mgmt:If
Type: operational
```

fltPowerBudgetChassisPsuInsufficient

Fault Code:F0764

Message

Chassis [id] has had PSU failures. Please correct the problem by checking input power or replace the PSU

Explanation

This fault typically occurs when atleast 2 PSU are not powered on.

Recommended Action

If you see this fault, take the following actions:Consider adding and powering 2 PSU.

Fault Details

```
Severity: major
Cause: psu-failure
mibFaultCode: 764
mibFaultName: fltPowerBudgetChassisPsuInsufficient
moClass: power:Budget
Type: environmental
```

fltPowerBudgetFirmwareMismatch

Fault Code:F0798

Message

Firmware on blade [chassisId]/[slotId] does not allow chassis level power capping. Please consider upgrading to atleast 1.4 version

Explanation

This fault typically occurs when CIMC or BIOS firmware is older than 1.4.

Recommended Action

If you see this fault, take the following actions:Consider upgrading to 1.4 or higher version.

Fault Details

```
Severity: major
Cause: old-firmware
mibFaultCode: 798
mibFaultName: fltPowerBudgetFirmwareMismatch
moClass: power:Budget
Type: environmental
```

fltPowerBudgetPowerBudgetBmcProblem

Fault Code:F0637

Message

Power cap application failed for server [chassisId]/[slotId]Power cap application failed for server [id]

Explanation

This fault typically occurs when CIMC or BIOS has failed to enforce powercap.

Recommended Action

If you see this fault, take the following actions:

Step 1 Check the power consumption of blade. If consumption is significantlygreater than power cap, switch to manual per blade cap. If consumption isstill high, it indicates faulty cimc or bios software.

Step 2 Execute **show tech-support** command for UCSM and chassis and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: 637
mibFaultName: fltPowerBudgetPowerBudgetBmcProblem
moClass: power:Budget
Type: environmental
```

fltPowerBudgetPowerBudgetCmcProblem

Fault Code:F0635

Message

Power cap application failed for chassis [id]

Explanation

This fault typically occurs when CMC has failed to enforce power cap.

Recommended Action

If you see this fault, take the following actions:

Step 1 Check the power consumption of chassis. If consumption is significantly greater than power cap, consider reducing the group cap so that other chassis consumption can be reduced to make up for the increase.

Step 2 Execute **show tech-support** command for UCSM and chassis and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: 635
mibFaultName: fltPowerBudgetPowerBudgetCmcProblem
moClass: power:Budget
Type: environmental
```

fltPowerBudgetPowerBudgetDiscFail

Fault Code:F0640

Message

Insufficient power available to discover server [chassisId]/[slotId]Insufficient power available to discover server [id]

Explanation

This fault typically occurs when discovery fails due to unavailable power in the group.

Recommended Action

If you see this fault, take the following actions:

Step 1 Consider increasing the group cap.

Step 2 Another option is to reduce the blades or chassis in the system.

Fault Details

```
Severity: major
Cause: power-cap-fail
```

```
       mibFaultCode: 640
       mibFaultName: fltPowerBudgetPowerBudgetDiscFail
       moClass: power:Budget
       Type: environmental
```

fltPowerBudgetPowerCapReachedCommit

Fault Code:F0744

Message

P-State lowered as consumption hit power cap for server [chassisId]/[slotId]P-State lowered as consumption hit power cap for server [id]

Explanation

This fault typically occurs when bladed is being actively capped.

Recommended Action

If you see this fault, take the following actions:No action is needed.

Fault Details

```
       Severity: info
       Cause: power-consumption-hit-limit
       mibFaultCode: 744
       mibFaultName: fltPowerBudgetPowerCapReachedCommit
       moClass: power:Budget
       Type: environmental
```

fltPowerBudgetTStateTransition

Fault Code:F0765

Message

Blade [chassisId]/[slotId] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliantRack server [id] has been severely throttled. CIMC can recover if budget is redeployed to the blade or by rebooting the blade. If problem persists, please ensure that OS is ACPI compliant

Explanation

This fault typically occurs when processor T-state are used to severely throttle the CPU.

Recommended Action

If you see this fault, take the following actions:

Step 1   Redeploy budget for the particular group/blade/chassis.

Step 2   If problem persists, reboot the blade.

Fault Details

```
       Severity: critical
```

```
    Cause: no-ack-from-bios
    mibFaultCode: 765
    mibFaultName: fltPowerBudgetTStateTransition
    moClass: power:Budget
    Type: environmental
```

fltPowerChassisMemberChassisFirmwareProblem

Fault Code:F0741

Message

Chassis [id] cannot be capped as atleast one of the CMC or CIMC firmware version is less than 1.4. Please upgrade the firmware for cap to be applied.

Explanation

This fault typically occurs when CMC firmware is older than 1.4.

Recommended Action

If you see this fault, take the following actions:Consider upgrading to 1.4 or higher version.

Fault Details

```
    Severity: major
    Cause: old-chassis-component-firmware
    mibFaultCode: 741
    mibFaultName: fltPowerChassisMemberChassisFirmwareProblem
    moClass: power:ChassisMember
    Type: environmental
```

fltPowerChassisMemberChassisPsuInsufficient

Fault Code:F0742

Message

Chassis [id] cannot be capped as atleast two PSU need to be powered

Explanation

This fault typically occurs when atleast 2 PSU are not powered on.

Recommended Action

If you see this fault, take the following actions:Consider adding and powering 2 PSU.

Fault Details

```
    Severity: major
    Cause: psu-insufficient
    mibFaultCode: 742
    mibFaultName: fltPowerChassisMemberChassisPsuInsufficient
    moClass: power:ChassisMember
    Type: environmental
```

fltPowerChassisMemberChassisPsuRedundanceFailure

Fault Code:F0743

Message

Chassis [id] was configured for redundancy, but running in a non-redundant configuration.

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: psu-redundancy-fail
mibFaultCode: 743
mibFaultName: fltPowerChassisMemberChassisPsuRedundanceFailure
moClass: power:ChassisMember
Type: environmental
```

fltPowerChassisMemberPowerGroupCapInsufficient

Fault Code:F0740

Message

Chassis [id] cannot be capped as group cap is low. Please consider raising the cap.

Explanation

This fault typically occurs when updated group cap is insufficient for minimum hardware requirements.The newly added chassis to the group will not be capped as a result.

Recommended Action

If you see this fault, take the following actions:

Step 1   Consider increasing the group cap.

Step 2   Another option is to reduce the blades or chassis in the system.

Fault Details

```
Severity: major
Cause: group-cap-insufficient
mibFaultCode: 740
mibFaultName: fltPowerChassisMemberPowerGroupCapInsufficient
moClass: power:ChassisMember
Type: environmental
```

fltPowerGroupPowerGroupBudgetIncorrect

Fault Code:F0643

Message

admin committed insufficient for power group [name], using previous value [operCommitted]

Explanation

This fault typically occurs when updated group cap is insufficient for minimum hardware requirements.The previously entered cap will be used for provisioning.

Recommended Action

If you see this fault, take the following actions:

Step 1   Consider increasing the group cap.

Step 2   Another option is to reduce the blades or chassis in the system.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: 643
mibFaultName: fltPowerGroupPowerGroupBudgetIncorrect
moClass: power:Group
Type: environmental
```

fltPowerGroupPowerGroupInsufficientBudget

Fault Code:F0642

Message

insufficient budget for power group [name]

Explanation

This fault typically occurs when group cap is insufficient for minimum hardware requirements.

Recommended Action

If you see this fault, take the following actions:

Step 1   Consider increasing the group cap.

Step 2   Another option is to reduce the blades or chassis in the system.

Fault Details

```
Severity: major
Cause: power-cap-fail
mibFaultCode: 642
mibFaultName: fltPowerGroupPowerGroupInsufficientBudget
moClass: power:Group
Type: environmental
```

fltPowerPolicyPowerPolicyApplicationFail

Fault Code:F0766

Message

Insufficient budget to apply no-cap priority through policy [name]. Blades will continue to be capped.

Explanation

Power Policy application on blades failed Cisco UCS Manager raises this fault when any of the following scenario occur:

- Blades will not be able to operate normally without power capping due to the limited power budget on the blades.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Increase the power budget for the blades.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: minor
Cause: no-cap-fail
mibFaultCode: 766
mibFaultName: fltPowerPolicyPowerPolicyApplicationFail

Service Profile-Related Faults

This section contains faults raised as a result of issues related to the service profile associated with a server.

fltLsComputeBindingAssignmentRequirementsNotMet

Fault Code:F0689

Message

Assignment of service profile [name] to server [pnDn] failed

Explanation

The server could not be assigned to the service profile.This fault typically occurs as a result of one of the following issues:

- The selected server doesn't meet the requirements of the service profile.
- In case restricted migration was chosen, the selected server doesn't match the currently or previously assigned server.

Recommended Action

If you see this fault, take the following action:

Step 1   Select a different server that meets the requirements of the service profile or matches the currently or previously assigned server

Fault Details

```
Severity: minor
Cause: assignment-failed
mibFaultCode: 689
mibFaultName: fltLsComputeBindingAssignmentRequirementsNotMet
moClass: ls:ComputeBinding
Type: server
```

fltLsServerAssociationFailed

Fault Code:F0332

Message

Service profile [name] association failed for [pnDn]

Explanation

The service profile could not be associated with the server.This fault typically occurs because the Cisco UCS Manager cannot communicate with one or more of the following:

- Fabric interconnect
- BMC on the server
- SAS controller driver
- Server

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check the FSM tab for the server and service profile to determine why the association failed.

Step 3 If the server is stuck in an inappropriate state, such as booting, power cycle the server.

Step 4 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: association-failed
mibFaultCode: 332
mibFaultName: fltLsServerAssociationFailed
moClass: ls:Server
Type: server
```

fltLsServerConfigFailure

Fault Code:F0327

Message

Service profile [name] configuration failed due to [configQualifier]

Explanation

The named configuration qualifier is not available.This fault typically occurs because the Cisco UCS Manager cannot successfully deploy the service profile due to a lack of resources that meet the named qualifier. For example, this fault can occur if:

- The service profile is configured for a server adapter with vHBAs, and the adapter on the server does not support vHBAs.
- The local disk configuration policy in the service profile specifies the No Local Storage mode, but the server contains local disks.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the state of the server and ensure that it is in either the discovered or unassociated state.

Step 3   If the server is associated or undiscovered, do one of the following:

– Discover the server.

– Disassociate the server from the current service profile.

– Select another server to associate with the service profile.

Step 4   Review each policy in the service profile and verify that the selected server meets the requirements in the policy.

Step 5   If the server does not meet the requirements of the service profile, do one of the following:

– Modify the service profile to match the server.

– Select another server that does meet the requirements to associate with the service profile.

Step 6   If you can verify that the server meets the requirements of the service profile, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: configuration-failure
mibFaultCode: 327
mibFaultName: fltLsServerConfigFailure
moClass: ls:Server
Type: server
```

fltLsServerDiscoveryFailed

Fault Code:F0326

Message

Service profile [name] discovery failed

Explanation

The shallow discovery that occurs when the server associated with service profile fails.If the server is up and the data path is working, this fault typically occurs as a result of one of the following issues:

• The Cisco UCS Manager cannot communicate with the BMC on the server.

• The server cannot communicate with the fabric interconnect.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the FSM tab and view the current state of the server and any FSM operations.

Step 3   Check the error descriptions and see if any server components indicate a failure.

Step 4   If the server or a server component has failed, do the following:

    a.   Check the operational state of the server.

    b.   If the server is not operable, re-acknowledge the server.

Step 5   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: discovery-failed
mibFaultCode: 326
mibFaultName: fltLsServerDiscoveryFailed
moClass: ls:Server
Type: server
```

fltLsServerFailed

Fault Code:F0324

Message

Service profile [name] failed

Explanation

The server has failed.This fault typically occurs if the adapter power on self-test results in major and critical errors.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the POST results for the server.In the Cisco UCS Manager GUI, you can access the POST results from the General tab for the server. In the Cisco UCS Manager CLI, you can access the POST results through the **show post** command under the scope for the server.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: server-failed
mibFaultCode: 324
mibFaultName: fltLsServerFailed
moClass: ls:Server
Type: server
```

fltLsServerInaccessible

Fault Code:F0331

Message

Service profile [name] cannot be accessed

Explanation

The Cisco UCS Manager cannot communicate with the BMC on the server.This fault typically occurs as a result of one of the following issues:

- The server port or ports have failed.
- The I/O module is offline.
- The BMC has failed.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   If Cisco UCS Manager shows that the BMC is down, physically reseat the server.

Step 3   If the Cisco UCS Manager shows that the server ports have failed, attempt to enable them.

Step 4   If the I/O module is offline, check for faults on that component.

Step 5   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: server-inaccessible
mibFaultCode: 331
mibFaultName: fltLsServerInaccessible
moClass: ls:Server
Type: server
```

fltLsServerMaintenanceFailed

Fault Code:F0329

Message

Service profile [name] maintenance failed

Explanation

The Cisco UCS Manager currently does not use this fault.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: maintenance-failed
mibFaultCode: 329
mibFaultName: fltLsServerMaintenanceFailed
moClass: ls:Server
Type: server
```

fltLsServerRemoved

Fault Code:F0330

Message

Service profile [name] underlying resource removed

Explanation

The Cisco UCS Manager cannot access the server associated with the service profile.This fault typically occurs as a result of one of the following issues:

*   The server has been physically removed from the slot.

*   The server is not available.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   If the server was removed from the slot, reinsert the server in the slot.

Step 3   If the server was not removed, remove and reinsert the server.**NOTE:**If the server is operable, this action can be disruptive to current operations.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: equipment-removed
mibFaultCode: 330
mibFaultName: fltLsServerRemoved
moClass: ls:Server
Type: server
```

fltLsServerServer-unfulfilled

Fault Code:F0337

Message

Server [pnDn] does not fulfill Service profile [name] due to [configQualifier]

Explanation

The server no longer meets the qualification requirements of the service profile.This fault typically occurs as a result of one of the following issues:

- The server has been physically changed.

- A required component of the server has failed.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the server inventory compare to the service profile qualifications.

Step 3   If the server inventory does not match the service profile qualifications, do one of the following:

  – Associate the server with a different service profile.

  – Ensure the server has sufficient resources to qualify for the current service profile.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: warning
Cause: server-failed
mibFaultCode: 337
mibFaultName: fltLsServerServerUnfulfilled
moClass: ls:Server
Type: server
```

fltLsServerUnassociated

Fault Code:F0334

Message

Service profile [name] is not associated

Explanation

The service profile has not yet been associated with a server or a server pool.This fault typically occurs as a result of one of the following issues:

- There is no acceptable server in the server pool.

- The association failed.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 If you did not intend to associate the service profile, ignore the fault.

Step 3 If you did intend to associate the service profile, check the association failure fault.

Step 4 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: unassociated
mibFaultCode: 334
mibFaultName: fltLsServerUnassociated
moClass: ls:Server
Type: server
```

fltLsmaintMaintPolicyUnresolvableScheduler

Fault Code:F0795

Message

Schedule [schedName] referenced by maintenance policy [name] does not exist

Explanation

The schedule that is referenced by the maintenance policy does not exist. This fault typically occurs as a result of one of the following issues:

- The schedule does not exist.

- The schedule was deleted.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check if the named schedule exists. If it is deleted or missing, try to create it.

Step 3 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: non-existent-scheduler
mibFaultCode: 795
mibFaultName: fltLsmaintMaintPolicyUnresolvableScheduler
moClass: lsmaint:MaintPolicy
Type: server
```

System Event Log-Related Faults

This section contains faults raised as a result of issues related to the system event log (SEL) in the Cisco UCS instance.

fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure

Fault Code:F0747

Message

Auto core transfer failure at remote server [hostname]:[path] [exportFailureReason]

Explanation

Cisco UCS Manager cannot transfer core file to remote tftp server. This fault typically occurs as a result of one of the following issues:

- The remote server is not accessible.
- The parameters as specified in the core-export-target, such as path,port andserver-name, are incorrect.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify the connectivity to the remote server.

Step 3   Verify the path information of the remote server.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: tftp-server-error
mibFaultCode: 747
mibFaultName: fltSysdebugAutoCoreFileExportTargetAutoCoreTransferFailure
moClass: sysdebug:AutoCoreFileExportTarget
Type: sysdebug
```

fltSysdebugMEpLogMEpLogFull

Fault Code:F0462

Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

Explanation

This fault typically occurs because the Cisco UCS Manager could not transfer the SEL file to the location specified in the SEL policy.

Recommended Action

If you see this fault, take the following actions:

Step 1   Verify the configuration of the SEL policy to ensure that the location, user, and password provided are correct.

Step 2   This is an info level fault and can be ignored if you do not want to clear the SEL at this time.

Step 3   If this does not resolve the problem, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: info
Cause: log-capacity
mibFaultCode: 462
mibFaultName: fltSysdebugMEpLogMEpLogFull
moClass: sysdebug:MEpLog
Type: operational
```

fltSysdebugMEpLogMEpLogLog

Fault Code:F0460

Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

Explanation

This fault typically occurs because the Cisco UCS Manager has detected that the system event log (SEL) on the server is approaching full capacity. The available capacity in the log is low.

Recommended Action

If you see this fault, take the following actions:

Step 1   If desired, clear the SEL in the Cisco UCS Manager.

Step 2   This is an info level fault and can be ignored if you do not want to clear the SEL at this time.

Fault Details

```
Severity: info
Cause: log-capacity
mibFaultCode: 460
mibFaultName: fltSysdebugMEpLogMEpLogLog
moClass: sysdebug:MEpLog
Type: operational
```

fltSysdebugMEpLogMEpLogVeryLow

Fault Code:F0461

Message

Log capacity on [side] IOM [chassisId]/[id] is [capacity]Log capacity on Management Controller on server [chassisId]/[slotId] is [capacity]Log capacity on Management Controller on server [id] is [capacity]

Explanation

This fault typically occurs because the Cisco UCS Manager has detected that the system event log (SEL) on the server is almost full. The available capacity in the log is very low.

Recommended Action

If you see this fault, take the following actions:

Step 1   If desired, clear the SEL in the Cisco UCS Manager.

Step 2   This is an info level fault and can be ignored if you do not want to clear the SEL at this time.

Fault Details

```
Severity: info
Cause: log-capacity
mibFaultCode: 461
mibFaultName: fltSysdebugMEpLogMEpLogVeryLow
moClass: sysdebug:MEpLog
Type: operational
```

fltSysdebugMEpLogTransferError

Fault Code:F0532

Message

Server [chassisId]/[slotId] [type] transfer failed: [operState]Server [id] [type] transfer failed: [operState]

Explanation

This fault occurs when transfer of the mananged end point log filessuch as SEL, fails.

Recommended Action

If you see this fault, take the following actions:

Step 1   If its a SEL related error, check the connectivity to the CIMC.

Step 2   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 3   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

Severity: info
Cause: file-transfer-failed
mibFaultCode: 532
mibFaultName: fltSysdebugMEpLogTransferError
moClass: sysdebug:MEpLog
Type: operational

Traffic Monitioring-related Faults

This section contains faults caused by issues related to traffic monitoring.

fltFabricMonSpanConfigFail

Fault Code:F0757

Message

Configuration for traffic monitor [name] failed, reason: [configFailReason]

Explanation

This fault typically occurs when the configurtaion put under traffic monitoring session is not correct.

Recommended Action

If you see this fault, take the following action:

Step 1   Correct the problem provided in the description of the raised fault.

Fault Details

Severity: major
Cause: config-error
mibFaultCode: 757
mibFaultName: fltFabricMonSpanConfigFail
moClass: fabric:Mon
Type: network

Virtual Network Interface-Related Faults

This section contains faults caused by issues related to a virtual network interface allocation in a service profile.

fltDcxNsFailed

Fault Code:F0304

Message

Server [chassisId]/[slotId] (service profile: [assignedToDn]) virtual network interface allocation failed.Server [id] (service profile: [assignedToDn]) virtual network interface allocation failed.

Explanation

The adaptor unit's vif-namespace activation failed due to insufficient resources.The Cisco UCS Manager raises this fault when any of the following scenarios occur:

- The number of deployed vif resources exceeds the max vif resources available on the adaptor unit corresponding to the fabric interconnect

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Check the Ns "size" and "used" resources to get the exceeded number.

Step 3   Unconfigure/delete the exceeded number of vNICs on the adaptor unit.

Step 4   Add additional fabric uplinks from IOM to the corresponding fabric interconnect and reacknowledge the chassis. That will increase the "NS size" on the adaptor

Step 5   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: major
Cause: insufficient-resources
mibFaultCode: 304
mibFaultName: fltDcxNsFailed
moClass: dcx:Ns
Type: server
```

fltDcxVIfLinkState

Fault Code:F0479

Message

Virtual interface [id] link state is down

Explanation

This fault occurs when Cisco UCS cannot send or receive data through an uplink port.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Re-enable the uplink port that has failed.

Step 3   If the above action did not resolve the issue, execute the **show-tech-support** command.

Step 4   Contact Cisco Technical Support.

Fault Details

```
Severity: major
Cause: vif-down
mibFaultCode: 479
mibFaultName: fltDcxVIfLinkState
moClass: dcx:VIf
Type: management
```

fltDcxVcDown

Fault Code:F0283

Message

[transport] VIF [chassisId] / [slotId] [switchId]-[id] down, reason: [stateQual][transport] VIF [chassisId] / [id] [switchId]-[id] down, reason: [stateQual]

Explanation

The transport VIF for server is down.The Cisco UCS Manager raises this fault when any of the following scenario occur:

• Endpoint(switch/fabric interconnect) reports the connectivity state on virtual interface as one of: a.down, b.errored, c.unavailable.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the blade discovery was completed successfully. Check the states on all of the communicating ports in an end to end manner.

Step 3   If connectivity seems correct, recommision the server.

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

    Severity: major
    Cause: link-down
    mibFaultCode: 283
    mibFaultName: fltDcxVcDown
    moClass: dcx:Vc
    Type: network

fltDcxVcMgmt-vif-down

Fault Code:F0459

Message

IOM [chassisId] / [slotId] ([switchId]) management VIF [id] down, reason [stateQual]

Explanation

transport VIF for IO-Module is downCisco UCS Manager raises this fault when any of the following scenario occur:

- Endpoint(switch/fabric interconnect) reports the connectivity state on virtual interface as one of: a.down b.errored c.unavailable

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2   Verify that the chassis discovery has gone through successfully. Check the states on all communicating ports in end to end manner

Step 3   If connectivity seems correct, recommision the chassis

Step 4   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

    Severity: major
    Cause: cmc-vif-down
    mibFaultCode: 459
    mibFaultName: fltDcxVcMgmtVifDown
    moClass: dcx:Vc
    Type: network

VLAN-Related Faults

This section contains faults caused by issues related to a VLAN fault.

fltFabricVlanPrimaryVlanMissingIsolated

Fault Code:F0620

Message
Primary Vlan can not be resolved for isolated vlan [name]

Explanation
This fault typically occurs when Cisco UCS Manager encountered a problem resolvingthe primary vlan Id corresponding to a particular isolated vlan.

Recommended Action
If you see this fault, take the following actions:

Step 1   Assocate the isolated vlan with a valid primary vlan.

Step 2   Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: minor
Cause: primary-vlan-missing-isolated
mibFaultCode: 620
mibFaultName: fltFabricVlanPrimaryVlanMissingIsolated
moClass: fabric:Vlan
Type: network
```

fltSwVlanPortNsResourceStatus

Fault Code:F0549

Message
Vlan-Port Resource exceeded

Explanation
port vlan count has exceeded the allowed max limit on the switchCisco UCS Manager raises this fault when any of the following scenario occur:

- The total number of user deployed vlan port instances(access domain + border domain) in the system exceeds the max allowed limit

Recommended Action
If you see this fault, take the following actions:

Step 1 If the fault occurs in the Cisco UCS Manager GUI, capture one or more screenshots of the fault message and other related areas.

Step 2 Check the exceeded count on fabric interconnect through GUI & CLI

Step 3 The vlan port count can be reduced in one of the following ways:

- Delete some vlans from LAN cloud
- Remove some vlans under vnics
- Unconfigure some vnics
- Unconfigure some uplink ethernet ports on the switch

Step 4 Execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: limit-reached
mibFaultCode: 549
mibFaultName: fltSwVlanPortNsResourceStatus
moClass: sw:VlanPortNs
Type: management
```

VSAN-Related Faults

This section contains faults caused by issues related to a VSAN fault.

fltFabricVsanEpErrorDisabled

Fault Code:F0797

Message

[type] Port [slotId]/[portId] on fabric interconnect [switchId] has VSAN [id] in error disabled statePort channel [portId] on fabric interconnect [switchId] has VSAN [id] in error disabled state

Explanation

This fault typically occurs when a port is assigned to a VSAN that exists in the restricted range (3840-4078) or VSAN 4079 which is reserved .

Recommended Action

If you see this fault, take the following action:

Step 1 If VSAN is in the restricted range (3840-4078).

Step 2 Delete the port channels on the fabric-interconnect.

Step 3 Disable uplink trunking on the fabric-interconnect.

Step 4 Switch to FC switch mode.

Step 5   If VSAN is reserved (4079), move the port to non reserved VSAN.

Fault Details

Severity: major
Cause: vsan-misconfigured
mibFaultCode: 797
mibFaultName: fltFabricVsanEpErrorDisabled
moClass: fabric:VsanEp
Type: network

fltFabricVsanErrorDisabled

Fault Code:F0796

Message

VSAN [name] is [operState]

Explanation

This fault typically occurs when VSAN exists in the range (3840-4078) and FC end host mode is enabled.

Recommended Action

If you see this fault, take the following action:

Step 1   Delete the port channels on the fabric-interconnect.

Step 2   Disable uplink trunking on the fabric-interconnect.

Step 3   Switch to FC switch mode.

Fault Details

Severity: major
Cause: vsan-misconfigured
mibFaultCode: 796
mibFaultName: fltFabricVsanErrorDisabled
moClass: fabric:Vsan
Type: network

C H A P T E R 3

FSM Faults

This chapter provides information about the faults that may be raised during one or more stages of an FSM task.

Note Unless an FSM fault appears on the Faults tab, you do not need to take any action to resolve the fault. FSM stages fail and retry for many reasons. These faults do not always indicate an issue with a component or the FSM.

fsmFailAaaEpUpdateEp

Fault Code:F999619

Message

[FSM:FAILED]: sam:dme:AaaEpUpdateEp

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details
```
Severity: critical
Cause: fsm-failed
mibFaultCode: 999619
mibFaultName: fsmFailAaaEpUpdateEp
moClass: aaa:Ep
Type: fsm
```

fsmFailAaaRealmUpdateRealm

Fault Code:F999620

Message

[FSM:FAILED]: sam:dme:AaaRealmUpdateRealm

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fsm-failed

fsmFailComputePhysicalActivateAdaptor

Fault Code:F1000084

Message

[FSM:FAILED]: sam:dme:ComputePhysicalActivateAdaptor

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: 1000084
mibFaultName: fsmFailComputePhysicalActivateAdaptor
moClass: compute:Physical
Type: fsm
```

fsmFailComputePhysicalAssociate

Fault Code:F1000013

Message

[FSM:FAILED]: sam:dme:ComputePhysicalAssociate

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

Cause: fsm-failed
mibFaultCode: 1000024
mibFaultName: fsmFailComputePhysicalBiosRecovery
moClass: compute:Physical
Type: fsm
```

fsmFailComputePhysicalCmosReset

Fault Code:F1000026

Message

[FSM:FAILED]: sam:dme:ComputePhysicalCmosReset

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical
Cause: fsm-failed
mibFaultCode: 1000026
mibFaultName: fsmFailComputePhysicalCmosReset
moClass: compute:Physical
Type: fsm
```

fsmFailComputePhysicalConfigSoL

Fault Code:F1000123

Message

[FSM:FAILED]: sam:dme:ComputePhysicalConfigSoL

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: critical

Type: fsm
```

fsmRmtErrComputeBladeDiag:NicConfigPeer

Fault Code:F77975

Message

[FSM:STAGE:REMOTE-ERROR]: Configure adapter in server [chassisId]/[slotId] for diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:NicConfigPeer)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

fsmRmtErrComputeBladeDiscover:BmcInventory

Fault Code:F77960

Message

[FSM:STAGE:REMOTE-ERROR]: getting inventory of server [chassisId]/[slotId] via CIMC(FSM-STAGE:sam:dme:ComputeBladeDiscover:BmcInventory)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

Type: fsm
```

fsmRmtErrComputeBladeUpdateBoardController:BladePowerOn

Fault Code:F78370

Message

[FSM:STAGE:REMOTE-ERROR]: Power on server
[chassisId]/[slotId](FSM-STAGE:sam:dme:ComputeBladeUpdateBoardController:BladePowerOn)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: blade-power-on-failed
mibFaultCode: 78370
mibFaultName: fsmRmtErrComputeBladeUpdateBoardControllerBladePowerOn
moClass: compute:Blade
Type: fsm
```

fsmRmtErrComputeBladeUpdateBoardController:PollUpdateStatus

Fault Code:F78370

Message

[FSM:STAGE:REMOTE-ERROR]: Waiting for Board Controller update to
complete(FSM-STAGE:sam:dme:ComputeBladeUpdateBoardController:PollUpdateStatus)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

Type: fsm
```

fsmRmtErrComputePhysicalAssociate:PnuOSConfig

Fault Code:F78413

Message

[FSM:STAGE:REMOTE-ERROR]: Configure server with service profile [assignedToDn] pre-boot environment(FSM-STAGE:sam:dme:ComputePhysicalAssociate:PnuOSConfig)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

```

fsmRmtErrComputePhysicalDisassociate:BmcPreconfigPnuOSLocal

Fault Code:F78414

Message

[FSM:STAGE:REMOTE-ERROR]: prepare configuration for preboot environment(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:BmcPreconfigPnuOSLocal)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

fsmRmtErrComputePhysicalDisassociate:SwUnconfigPnuOSPeer

Fault Code:F78414

Message

[FSM:STAGE:REMOTE-ERROR]: Unconfigure secondary fabric interconnect for server pre-boot environment(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:SwUnconfigPnuOSPeer)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: sw-unconfig-pnuospeer-failed
mibFaultCode: 78414
mibFaultName: fsmRmtErrComputePhysicalDisassociateSwUnconfigPnuOSPeer
moClass: compute:Physical
Type: fsm
```

fsmRmtErrComputePhysicalDisassociate:TeardownVmediaLocal

Fault Code:F78414

Message

[FSM:STAGE:REMOTE-ERROR]: unprovisioning the Virtual Media bootable device for server(FSM-STAGE:sam:dme:ComputePhysicalDisassociate:TeardownVmediaLocal)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

fsmStFailComputeBladeDiag:HostInventory

Fault Code:F16535

Message

[FSM:STAGE:FAILED|RETRY]: Perform inventory of server [chassisId]/[slotId] in diagnostics environment(FSM-STAGE:sam:dme:ComputeBladeDiag:HostInventory)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

fsmStFailComputePhysicalAssociate:activateIBMCFw

Fault Code:F16973

Message

[FSM:STAGE:FAILED|RETRY]: Activate CIMC firmware of server
[serverId](FSM-STAGE:sam:dme:ComputePhysicalAssociate:activateIBMCFw)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: activateibmcfw-failed

Message

[FSM:STAGE:FAILED|RETRY]: configuring secondary fabric interconnect access to server
[id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:SwConfigPortNivPeer)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: sw-config-port-niv-peer-failed
mibFaultCode: 16520
mibFaultName: fsmStFailComputeRackUnitDiscoverSwConfigPortNivPeer
moClass: compute:RackUnit
Type: fsm
```

fsmStFailComputeRackUnitDiscover:SwConfigureConnLocal

Fault Code:F16520

Message

[FSM:STAGE:FAILED|RETRY]: Configuring fabric-interconnect connectivity to CIMC of server [id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:SwConfigureConnLocal)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: sw-configure-conn-local-failed
mibFaultCode: 16520
mibFaultName: fsmStFailComputeRackUnitDiscoverSwConfigureConnLocal
moClass: compute:RackUnit
Type: fsm
```

fsmStFailComputeRackUnitDiscover:SwConfigureConnPeer

Fault Code:F16520

Message

[FSM:STAGE:FAILED|RETRY]: Configuring fabric-interconnect connectivity to CIMC of server [id](FSM-STAGE:sam:dme:ComputeRackUnitDiscover:SwConfigureConnPeer)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning

Message

[FSM:STAGE:FAILED|RETRY]: copy Core file on subordinate switch to tmp
directory(FSM-STAGE:sam:dme:SysdebugCoreDownload:CopySub)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: copy-sub-failed
mibFaultCode: 16650
mibFaultName: fsmStFailSysdebugCoreDownloadCopySub
moClass: sysdebug:Core
Type: fsm
```

fsmStFailSysdebugCoreDownload:DeletePrimary

Fault Code:F16650

Message

[FSM:STAGE:FAILED|RETRY]: Delete the Core file from primary switch under tmp
directory(FSM-STAGE:sam:dme:SysdebugCoreDownload:DeletePrimary)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: delete-primary-failed
mibFaultCode: 16650
mibFaultName: fsmStFailSysdebugCoreDownloadDeletePrimary
moClass: sysdebug:Core
Type: fsm
```

fsmStFailSysdebugCoreDownload:DeleteSub

Fault Code:F16650

Message

[FSM:STAGE:FAILED|RETRY]: Delete the Core file from subordinate under tmp
directory(FSM-STAGE:sam:dme:SysdebugCoreDownload:DeleteSub)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

mibFaultName: fsmStFailSysdebugCoreDownloadDeleteSub
moClass: sysdebug:Core
Type: fsm
```

fsmStFailSysdebugLogControlEpLogControlPersist:Local

Fault Code:F16606

Message

[FSM:STAGE:FAILED|RETRY]: persisting LogControl on
local(FSM-STAGE:sam:dme:SysdebugLogControlEpLogControlPersist:Local)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```
Severity: warning
Cause: local-failed
mibFaultCode: 16606
mibFaultName: fsmStFailSysdebugLogControlEpLogControlPersistLocal
moClass: sysdebug:LogControlEp
Type: fsm
```

fsmStFailSysdebugLogControlEpLogControlPersist:Peer

Fault Code:F16606

Message

[FSM:STAGE:FAILED|RETRY]: persisting LogControl on
peer(FSM-STAGE:sam:dme:SysdebugLogControlEpLogControlPersist:Peer)

Explanation

None set.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to
resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the
Release Notes for Cisco UCS Manager and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve
the issue, execute the **show tech-support** command and contact Cisco Technical Support.

Fault Details

```

CHAPTER 4

Call Home Faults in Cisco UCS Manager

This chapter includes the following topics about Call Home faults in Cisco UCS Manager:

- About Call Home Messages, page 4-1
- Cisco UCS Faults that Raise Call Home Alerts, page 4-1
- Cisco UCS Faults and Call Home Priority Levels, page 4-16

About Call Home Messages

When you configure Call Home to send messages, the Cisco UCS Manager executes the appropriate command line interface (CLI) **show** command and attaches the command output to the message.

The Cisco UCS delivers the Call Home messages in the following formats:

- The short text format—A one- or two-line description of the fault that is suitable for pagers or printed reports.
- Full text format—Fully formatted message with detailed information that is suitable for human reading.
- XML machine readable format—Uses Extensible Markup Language (XML) and Adaptive Messaging Language (AML) XML schema definition (XSD). The AML XSD is published on the Cisco.com website at http://www.cisco.com/. The XML format enables communication with the Cisco Systems Technical Assistance Center.

Cisco UCS Faults that Raise Call Home Alerts

This section contains the following topics:

- Faults Raised by the Cisco UCS Manager, page 4-2
- Faults Raised by a Fabric Interconnect, page 4-4
- Faults Raised by Syslog, page 4-14

Note If the Smart Call Home is configured in the Cisco UCS instance, every fault listed in this section raises a Smart Call Home event to the Cisco Smart Call Home system. In addition, if the value in the Case Created column for the event is "yes", a Cisco Technical Support case is created and sent to the queue for a customer call-back.

Cisco UCS Faults and Error Messages Reference

OL-23156-03

4-1

Faults Raised by the Cisco UCS Manager

This section includes the following topics:

Diagnostic Faults Raised by the Cisco UCS Manager

Table 4-1 describes the diagnostic faults that cause the Cisco UCS Manager to raise a Call Home alert.

Table 4-1   Diagnostic Faults from the Cisco UCS Manager

Call Home Message	Severity	Customer Notification	Service Request	Support in Call Home	Fault Details
sam:dme:fltEquipmentChassis Identity	Critical	Yes	Yes	3.0 3.1	fltEquipmentChassisIdentity, page 2-8
sam:dme:fltEquipmentChassis Inoperable	Critical	Yes	Yes	3.1	fltEquipmentChassisInoperable, page 2-9

sam:dme:fltEquipmentPsuPower SupplyProblem	Major	Yes	No	3.1	fltEquipmentPsuPowerSupplyProblem, page 2-72

Faults Raised by a Fabric Interconnect

This section includes the following topics:

Diagnostic Faults Raised by a Fabric Interconnect

The following diagnostic faults cause a fabric interconnect to raise a Call Home alert:

TestFabricPort

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes, if ports_failed > 25%
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because one or more of the ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the failed port or ports are located in an expansion module, remove and re-insert the module.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

Step 2   Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.

Step 3   Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.

Step 4   If the SFP or SFP+ is working, then the module hardware is faulty.

a.   If the fixed module is affected, consider replacing the fabric interconnect.

b.   If an expansion module is affected, consider replacing the faulty module.

Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestForwardingEngine

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes, if ports_failed > 25%
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the failed port or ports are located in an expansion module, remove and re-insert the module.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

Step 2   Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.

Step 3   Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.

Step 4   If the SFP or SFP+ is working, then the module hardware is faulty.

   a.   If the fixed module is affected, consider replacing the fabric interconnect.

   b.   If an expansion module is affected, consider replacing the faulty module.

Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestForwardingEnginePort

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes, if ports_failed > 25%
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. the network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the failed port or ports are located in an expansion module, remove and re-insert the module.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

Step 2   Remove and re-insert the SFP or SFP+ and ensure the SFP or SFP+ is seated properly.

Step 3   Insert the suspected faulty SFP or SFP+ into a working port. If the working port becomes faulty, then the SFP or SFP+ is faulty. Consider replacing the faulty SFP or SFP+.

Step 4   If the SFP or SFP+ is working, then the module hardware is faulty.

   a.   If the fixed module is affected, consider replacing the fabric interconnect.

   b.   If an expansion module is affected, consider replacing the faulty module.

Schedule a downtime for the Cisco UCS instance to replace the hardware.

TestFrontPort

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes, if ports_failed > 25%
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

One or more ports have failed this diagnostic test either during the Power-On-Self-Test or during the run time monitoring. As a result, the Cisco UCS Manager shuts down the affected ports. The network connectivity to the devices connected on the failed ports is affected.

Recommended Action

If you see this fault, take the following actions:

Step 1 Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect.

Step 2 If the failed port or ports are located in an expansion module, do the following:

  a. Remove and re-insert the module.

  Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

  b. If the problem persists and if all of the ports are required to be functional on the fabric interconnect, schedule a downtime and replace the expansion module.

Step 3 If the failed port or ports are located in the fixed module and all ports are required to be functional on the fabric interconnect, schedule a downtime and replace the fabric interconnect.

TestInbandPort

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because the inband connectivity to the fabric interconnect is experiencing a failure. The fabric interconnect uses inband connectivity for the control plane protocols to connect to peers such as servers, LAN switches, and SAN switches. Examples of these control plane protocols include DCX, STP, LACP, and FSPF. If a fabric interconnect cannot run the appropriate control plane protocols, it can no longer function and the Cisco UCS Manager shuts down all of the ports on the fabric interconnect to avoid topology problems.

Recommended Action

If you see this fault, schedule a downtime and replace the fabric interconnect.

TestFabricEngine

Details

Severity: Major
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the fabric ASIC has reported a major failure. Connectivity among all of the ports depends upon the fabric ASIC. Therefore, the Cisco UCS Manager shuts down all ports on the fabric interconnect.

Recommended Action

If you see this fault, schedule a downtime and replace the fabric interconnect.

TestSPROM

Details

Severity: Major
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs when the Cisco UCS Manager cannot bring the affected module online because the module type is unidentified. For the expansion modules, the Cisco UCS Manager determines the module type from information stored in the module SPROM. If you see this error, the checksum calculation for the SPROM content has most likely failed.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

Recommended Action

If you see this fault, take the following actions:

Step 1 Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:

Step 2 Remove and re-insert the module to ensure that all pins are in good contact with the backplane.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

Step 3 If the problem persists after multiple re-insertions, schedule a downtime and replace the faulty module.

TestOBFL

Details

Severity: Minor
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the onboard fault logging (OBFL) flash has failed. The Cisco UCS Manager logs hardware failure messages to this flash component. That logging function is lost. However, other logs, such as the syslog, are not affected and can continue to work normally.

This fault does not affect the normal operation of the fabric interconnect. The fault can only occur on the fixed module. It cannot occur on the expansion modules.

Recommended Action

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at **http://www.cisco.com/tac**. Also refer to the *Release Notes for Cisco UCS Manager* and the *Cisco UCS Troubleshooting Guide*. If you cannot resolve the issue, execute the **show tech-support command** and contact Cisco Technical Support.

TestLED

Details

```
Severity: Minor
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show diagnostic result module all
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurrs when the Cisco UCS Manager cannot access the LED controls on a module. However, because the LED control uses the same transport mechanism that controls other key components on a module, this fault can indicate other failures. This fault can be caused by a bent pin on the module or fabric interconnect.

This fault can only occur on the expansion modules. It cannot occur on the fixed module.

Recommended Action

If you see this fault, take the following actions:

Step 1 Move the devices connected on the affected ports to other functional ports of the fabric interconnect or to another fabric interconnect:

Step 2 Remove and re-insert the module to ensure that all pins are in good contact with the backplane.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

Step 3 If this failure continues after re-insertion, insert this module into a known good fabric interconnect to determine whether the same failure occurs.

Step 4 If the problem persists, schedule a downtime and replace the faulty module.

Environmental Faults Raised by a Fabric Interconnect

The following environmental faults cause a fabric interconnect to raise a Call Home alert:

- TestFAN -- fan speed speed out of range >= expected. speed rpm, page 4-12
- Multiple fans missing or failed, page 4-12
- One fan missing or failed, page 4-13

Temperature Alarm

Details

Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show environment
Call Home Support: 3.0, 3.1

Explanation

This fault typically occurs because the temperature sensor reports that the affected chassis has exceeded the major or minor threshold value and is at a dangerously high temperature. If the operating temperature is not reduced, the system shuts down the affected chassis to avoid causing permanent damage. The chassis is powered back on after the temperature returns to a reasonable level.

Each chassis needs at least seven functional fans to maintain operating temperature.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the fault report includes **fan_failure_found**, do the following:

  a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, check the status of the affected fan to determine whether the temperature-related alarm is due to the failure of a fan.

  b. Ensure that a minimum of seven fans are installed in the chassis and are functioning properly.

  c. Check the fan-related syslog messages to see the exact reason for the failure. For example, the fan may have become non-operational.

  d. Replace the faulty fan to resolve the issue.

Step 2   If the fault report includes **temp_current >= maj_threshold or temp_current =< min_threshold**, do the following:

  a. In either the Cisco UCS Manager CLI or the Cisco UCS Manager GUI, view the acceptable temperature and voltage parameters and determine how much of the outlet or inlet temperature has reached or exceeded over the major or minor threshold value.

  b. Verify the following to ensure that the site where the chassis is installed meets the site guidelines:

    – The area is dry, clean, well-ventilated and air-conditioned.

    – The air conditioner is working correctly and maintains an ambient temperature of 0 to 40 degrees C.

    – The chassis is installed in an open rack whenever possible. If the installation on an enclosed rack is unavoidable, ensure that the rack has adequate ventilation.

    – The ambient airflow is unblocked to ensure normal operation. If the airflow is blocked or restricted, or if the intake air is too warm, an over temperature condition can occur.

    – The clearance around the ventilation openings of the chassis are at least 6 inches (15.24 cm).

- The chassis is not in an overly congested rack or is not directly next to another equipment rack. Heat exhaust from other equipment can enter the inlet air vents and cause an over temperature condition.

- The equipment near the bottom of a rack is not generating excessive heat that is drawn upward and into the intake ports of the chassis. The warm air can cause an over temperature condition.

- The cables from other equipment does not obstruct the airflow through the chassis or impair access to the power supplies or the cards. Route the cables away from any field-replaceable components to avoid disconnecting cables unnecessarily for equipment maintenance or upgrades.

PowerSupplyFailure

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show environment
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because a failure was recorded in the affected power supply unit and the affected component is working with only one power supply unit.

Recommended Action

If you see this fault, take the following actions:

Step 1   Check the power supply unit that has the problem, as follow:

- In the Cisco UCS Manager CLI, execute the **show environment power** command

- In the Cisco UCS Manager GUI, view the PSUs tab of the Chassis node on the Equipment tab.

Step 2   Verify that the power cord is properly connected to the power supply and to the power source.

Step 3   Ensure that the fabric interconnect is supplied with 220V (this is the only supported power supply configuration).

Step 4   Ensure that the power supply is properly inserted and plugged in.

Step 5   If problem persists, remove and re-insert the power-supply unit.

Step 6   If the power supply light is still not green and the status continues to show fail or shutdown, replace the faulty power supply unit.

TEMPERATURE_ALARM --- Sensor

Details

```
Severity: Major
Customer Notification: Yes
Service Request: Yes
Cisco UCS Manager CLI: show environment
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because the Cisco UCS Manager cannot access a temperature sensor. As a result, the Cisco UCS Manager cannot monitor or regulate the temperature for the affected component. The affected temperature sensor could be for a chassis, power supply, or module.

Recommended Action

If you see this fault, take the following actions:

Step 1 View the logs to determine the set of sensors that has failed, as follow:

- In the Cisco UCS Manager CLI, execute the **show logging** command
- In the Cisco UCS Manager GUI, view the logs under the Faults, Events, and Audit Log node on the Admin tab.

Step 2 If the failed sensors are on an expansion module or a power supply, do the following:

a. Remove and re-insert the power supply or module.

Follow the instructions outlined in the hardware installation guide for the fabric interconnect on how to insert the modules.

b. If the failure continues to persist after multiple re-insertions, replace the faulty power supply unit or the module.

Step 3 If the failed sensors are on the fixed module, replace the fabric interconnect as it can no longer regulate and monitor the chassis temperature.

TestFAN -- fan speed *speed* out of range >= expected. *speed* rpm

Details

```
Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show environment
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because the Cisco UCS Manager has detected a fan that is running at a speed that is too slow or too fast. A malfunctioning fan can affect the operating temperature of the chassis.

Recommended Action

If you see this fault, take the following actions:

Step 1 If the fan is running below the expected speed, ensure that the fan blades are not blocked.

Step 2 If the fan is running above the expected speed, remove and re-insert the fan.

Multiple fans missing or failed

Details

```
Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show environment
```

Explanation

This fault typically occurs because the Cisco UCS Manager has detected multiple fan failures. The malfunctioning fans can result in high operating temperatures, affect performance, and cause the Cisco UCS Manager to shut down the affected component.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the chassis fans have failed, do the following:

   a.   Check the fan status.

   b.   Ensure that at least seven fans are installed and functioning properly.

   c.   Check the fan-related syslog messages to see the exact reason for the failure. The fans may have become non-operational.

   d.   Replace the faulty fans to resolve the issue.

Step 2   If the power supply fans have failed and the power supply is operational, do the following:

   a.   Check the fan status.

   b.   Remove and re-insert the power supply and verify whether the fan is operational.

   c.   If the problem persists, replace the power-supply.

One fan missing or failed

Details

```
Severity: Minor
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show environment
Call Home Support: 3.0, 3.1
```

Explanation

This fault typically occurs because the Cisco UCS Manager has determined that a single fan is missing or has failed. A single missing or malfunctioning fan does not affect performance. A minimum of seven fans are required for a chassis to be operational.

Recommended Action

If you see this fault, take the following actions:

Step 1   If the chassis fans have failed, do the following:

   a.   Check the fan status.

   b.   Ensure that at least seven fans are installed and functioning properly.

   c.   Check the fan-related syslog messages to see the exact reason for the failure. The fan may have become non-operational.

   d.   Replace the faulty fan to resolve the issue.

Step 2   If the power supply fans have failed and the power supply is operational, do the following:

   a.   Check the fan status.

   b.   Remove and re-insert the power supply and verify whether the fan is operational.

c. If the problem persists, replace the power-supply.

Faults Raised by Syslog

The following faults cause syslog to raise a Call Home alert:

No license installed for feature, is on grace license, will expire in DD HH

Details

Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show logging
Call Home Support: 3.0, 3.1

Explanation

The evaluation license installed for the affected feature is running under a grace period. The grace period expires on the date shown in the log at which time the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

The impact on performance depends upon whether the affected feature is implemented.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at http://www.cisco.com/en/US/ordering/index.shtml

License for feature, will expire in HH MM

Details

Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show logging
Call Home Support: 3.0, 3.1

Explanation

The evaluation license installed for the affected feature expires within the number of hours and minutes listed in the alert. When that period expires, the Cisco UCS Manager disables the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at http://www.cisco.com/en/US/ordering/index.shtml

License has expired for feature

Details

```
Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show logging
Call Home Support: 3.0, 3.1
```

Explanation

The evaluation license installed for the affected feature has expired, and the Cisco UCS Manager has disabled the feature. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, obtain a permanent license for the affected feature through one of the following channels:

- Contact your local Cisco sales representative.
- Use the ordering tool at http://www.cisco.com/en/US/ordering/index.shtml

License file is missing for feature

Details

```
Severity: Major
Customer Notification: Yes
Service Request: No
Cisco UCS Manager CLI: show logging
Call Home Support: 3.0, 3.1
```

Explanation

The previously installed license for the affected feature is missing from the fabric interconnect configuraton storage, and the Cisco UCS Manager has disabled the feature. This issue can occur in rare circumstances such as flash corruption. To obtain more details, follow the instructions in the licensing chapter of the *Cisco UCS Manager CLI Configuration Guide* or the *Cisco UCS Manager GUI Configuration Guide*.

Recommended Action

If you see this fault, re-install the license from the license backup.

Cisco UCS Faults and Call Home Priority Levels

Because Call Home is present across several Cisco product lines, Call Home has developed its own standardized priority levels. The following table describes how the underlying Cisco UCS fault levels map to the Call Home priority levels.

Table 4-3 **Mapping of Cisco UCS Faults and Call Home Priority Levels**

UCS Fault	Call Home Priority	SCH Priority
—	(9) Catastrophic	—
—	(8) Disaster	—
—	(7) Fatal	—
(6) Critical	(6) Critical	Major
(5) Major	(5) Major	Major
(4) Minor	(4) Minor	Minor
(3) Warning	(3) Warning	Minor
—	(2) Notification	Minor
(1) Info	(1) Normal	Minor

When Call Home information is communicated in an e-mail format, the priority levels and faults appear in the following places.

- The SCH priority is communicated in the e-mail subject line.
- The Call Home priority is communicated as a "Severity Level:" header to the e-mail message.
- The UCS fault information is attached in the body of the e-mail.
- The UCS fault severity is identified within the attachment as "severity=".

Troubleshooting Transient Faults

Transient faults can occur during initial set up and discovery or when a server or virtual machine starts up. You can typically ignore these transient faults, as Cisco UCS Manager clears them automatically.

This chapter includes the following sections:

Initial Setup and Discovery Faults

Table 5-1 describes the transient faults that you may see during the initial setup and discovery process. The Cisco UCS Manager clears these faults. If you see them during the initial setup or discovery process, you can safely ignore these faults.

Table 5-1 *Transient Faults that Occur during Initial Setup and Discovery Process*

Fault Code	Fault Text	Description
F16581	`[FSM:STAGE:RETRY:]: user configuration to secondary(FSM-STAGE:sam:dme: AaaUserEpUpdateUserEp:SetUserPeer)`	The FSM could not send the user configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16745	`[FSM:STAGE:RETRY:]: QoS Classification Definition classification configuration on secondary(FSM-STAGE:sam:dme:QosclassDef initionConfigGlobalQoS:SetPeer)`	The FSM could not send the quality of the service configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16725	`[FSM:STAGE:RETRY:]: VM profile configuration on external VM manager(FSM-STAGE:sam:dme:VnicProfileSe tConfigVmm:SetLocal)`	The FSM could not send the VM profile configuration to the the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16580	`[FSM:STAGE:RETRY:]: realm configuration to secondary(FSM-STAGE:sam:dme: AaaRealmUpdateRealm:SetRealmPeer)`	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.

Table 5-1   Transient Faults that Occur during Initial Setup and Discovery (continued)Process

Fault Code	Fault Text	Description (continued)
F16724	`[FSM:STAGE:RETRY:]: external VM manager configuration on local fabric(FSM-STAGE:sam:dme:ExtvmmEpConfig :SetLocal)`	The FSM could not send the VM manager configuration to the primary fabric interconnect during the initial cluster configuration or the setup.
F16579	`[FSM:STAGE:RETRY:]: external aaa server configuration to secondary(FSM-STAGE: sam:dme:AaaEpUpdateEp:SetEpPeer)`	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16749	`[FSM:STAGE:RETRY:]: Uplink eth port configuration on B(FSM-STAGE: sam:dme:SwEthLanBorderDeploy: UpdateConnectivity)`	The FSM could not send the eth-uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16749	`[FSM:STAGE:RETRY:]: internal network configuration on B(FSM-STAGE: sam:dme:SwAccessDomainDeploy: UpdateConnectivity)`	The FSM could not send the internal network configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16749	`[FSM:STAGE:RETRY:]: Uplink fc port configuration on B(FSM-STAGE:sam: dme:SwFcSanBorderDeploy: UpdateConnectivity)`	The FSM could not send the fibre channel uplink configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16680	`[FSM:STAGE:RETRY:]: Enable virtual interface on local fabric interconnect (FSM-STAGE:sam:dme:MgmtIfEnableVip: Local)`	The FSM could not send the virtual interface configuration to the fabric interconnects during the initial cluster configuration or the setup.
F16579	`[FSM:STAGE:RETRY:]: keyring configuration on secondary(FSM-STAGE: sam:dme:PkiEpUpdateEp:SetKeyRingPeer)`	The FSM could not send the security configuration to the subordinate fabric interconnect during the initial cluster configuration or the setup.
F16539	`[FSM:STAGE:RETRY:]: Fabric interconnect mode configuration to primary(FSM-STAGE: sam:dme:FabricLanCloudSwitchMode: SwConfigPeer)`	The FSM could not send the end-host mode configuration on to the primary fabric interconnect during the initial cluster configuration or the setup.
F0429	`Fabric Interconnect A, HA functionality not ready`	The cluster configuration cannot be completed until the chassis discovery is completed.
F0400	`Chassis 1 connectivity configuration: un-acknowledged`	The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. THe Cisco UCS Manager reacknowledges the chassis to activate the other links.

Table 5-1   Transient Faults that Occur during Initial Setup and Discovery (continued)Process

Fault Code	Fault Text	Description (continued)
F0401	IOM 1/2 (B) current connectivity does not match discovery policy: unsupported-connectivity	The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. The Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link.
F0440	Chassis discovery policy conflict: Link IOM 1/2/2 to fabric interconnect B:1/1 not configured	The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active. The Cisco UCS Manager can clear this fault when the communication is established between the chassis and the fabric interconnect with that link.
F0332	AssociatePnuOSLocalDiskConfig fails with Service-Unavailable	During discovery, the server association failed due to an error when configuring the local disk controller. The associated remote invocation error code is 4106.
F0277	ether port 1 on fabric interconnect B oper state: link-up, reason: FEX not configured	The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.
F0276	ether port 4 on fabric interconnect B oper state: link-down, reason: Link failure or not-connected	One or more of the links on the chassis flapped during the initial discovery. This fault is generated when the link is down during the flapping.
F0206	Adapter 1/2/1 is unreachable	During discovery, the adapter information cannot be accessed from the server. This fault clears as soon as the information is available.
F0283	VIF 1 / 2 B-42/44 down, reason: Bound Physical Interface Down	The internal VIF that the Cisco UCS Manager uses during discovery failed.

Table 5-1   *Transient Faults that Occur during Initial Setup and Discovery (continued)Process*

Fault Code	Fault Text	Description (continued)
F0367	`No link between IOM port 1/1/2 and fabric interconnect A:1/2`	The ethernet server ports flapped on the fabric interconnect during the initial discovery, because the discovery policy was configured for more than one link. The Cisco UCS Manager clears this fault when the initial discovery succeeds with one link and the other links can be marked as active.
F0399	`Current connectivity for chassis 1 does not match discovery policy: unsupported-connectivity`	The Cisco UCS Manager discovered the chassis with only one link in the first attempt although the chassis discovery policy is configured for four links. Until the discovery is successful with that link, the remaining links cannot be marked as active.
F16520	`[FSM:STAGE:RETRY:]: Identify pre-boot environment agent on server 1/2 (FSM-STAGE:sam:dme:ComputeBlade Discover:PnuOSIdent)`	The FSM failed to identify the pre-boot environment on the server during discovery.
F77960	`[FSM:STAGE:REMOTE-ERROR]: Result: end-point-unavailable Code: unspecified Message: Waiting for BIOS POST Completion information from IBMC(sam:dme:ComputeBladeDiscover: BiosPostCompletion)`	The FSM did not receive a response from the server during discovery and is waiting for the BIOS POST completion information.
F0320	`Server 1/1 (service profile: ) has an invalid FRU: mismatch-identity-unestablishable`	The Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.
F77959	`[FSM:STAGE:REMOTE-ERROR]: Result: unidentified-fail Code: ERR-0505-IBMC-fru-retrieval-error Message: Could not get Fru from 7f060101, dn=fabric/server/chassis-1/slot-1 (sam:dme:FabricComputeSlotEpIdentify:Ex ecuteLocal)`	The Cisco UCS Manager could not identify the FRUs from the servers during initial discovery.
F16406	`[FSM:STAGE:RETRY:]: triggering chassis discovery via IOM 1/2(right)(FSM-STAGE:sam:dme:EquipmentI OCardFeConn:DiscoverChassis)`	In a cluster configuration, after the Cisco UCS Manager discovers the chassis through the I/O module connected to the primary fabric interconnect, it raises discovery through the I/O module connected to the secondary fabric interconnect.

Virtual Machine Startup Faults

When you power on a virtual machine on a server that has network adaptors connected to a distributed virtual wwitch through a port profile, the Events tab of the VMware vCenter may display the following event:

```
Virtual machine powered On with vNICs connected to dvPorts that have a port level
configuration, which might be different from the dvPort group configuration.
```

If you see this event, you can safely ignore it.

P A R T 2

Cisco UCS Manager SEL Messages

Introduction to System Event Log Messages

This chapter provides general information about System Event Log Messages. The following sections are included:

Information about System Event Log Messages

The system event log (SEL) resides on the CIMC in NVRAM. It records most server-related events, such as over- and under-voltage, temperature events, fan events, events from the BIOS, and so on. It also records platform errors such as memory errors, CPU errors, and so on.

The SEL is mainly used for troubleshooting purposes. UCSM uses SEL records to provide mechanisms for proactive health monitoring of the system (for example, faults and error statistics).

Tip   For more information about the SEL, including how to view the SEL for each server and configure the SEL policy, see the Cisco UCS configuration guides accessible through the *Cisco UCS B-Series Servers Documentation Roadmap*.

SEL File

The SEL file is approximately 40 KB in size, and no further events are recorded when it is full. It must be cleared before additional events can be recorded.

SEL Policy

The SEL policy can be configured to backup the SEL to a remote server, and, optionally to clear the SEL after a backup operation occurs. A back up operation can be triggered based upon the following actions defined by the user as a part of SEL backup policy.

- On SEL log full

- On change of server association

- On expiration of timer interval, and so on.

User can also manually backup or clear the SEL.

BIOS Messages

This chapter provides information about the BIOS messages that are present in the Cisco version of the BIOS:

POST Error Messages and Handling

The BIOS outputs the current boot progress codes to the System Event Log (SEL) and to the UCS Manager. Progress codes are 32 bit quantities plus optional data. The 32 bits include class, subclass, and operation information. The class and subclass fields point to the type of hardware that is being initialized. The operation field represents the specific initialization activity.

Based on the data bit availability to display progress codes, a progress code can be customized to fit the data width. The higher the data bit, the higher the granularity of information that can be sent on the progress port. The progress codes can be reported by the system BIOS or optional ROMs.

BIOS Message Severities

BIOS messages have these severities:

- Minor—The system continues booting in a degraded state. The user might want to replace the unit. The POST Error Pause option setting in the BIOS setup does not have any effect on this error.
- Major—The POST Error Pause option setting in the BIOS setup determines whether the error manager pauses the system to allow the user to take immediate corrective action or the system continues the booting process.

Note For the **0048 Password check failed** message, the system halts, and after the next reset or reboot, displays the error code on the screen.

- Fatal—The system halts during post at a blank screen with the text `Unrecoverable fatal error found. System will not boot until the error is resolved`," and `Press <F2> to enter setup`. The POST Error Pause option setting in the BIOS setup does not have any effect with this class of error.

  When the F2 key is pressed on the keyboard, the error message is displayed on the screen, and an error is logged to the SEL with the error code. The system cannot boot unless the error is resolved. The faulty part must be replaced, and the system must be restarted.

BIOS Message Format

Table 7-1 describes the format used in BIOS messages.

Table 7-1   Error Message Format

Generator ID	Sensor Type Code	Sensor number	Type code	Event Data1	Event Data2	Event Data3
33h (BIOS POST)	0Fh (System Firmware Progress)	0Fh (System Firmware Progress)	6Fh (Sensor Specific Offset)	A0h (OEM Codes in Data2 and Data3)	xxh (Low Byte of POST Error Code)	xxh (High Byte of POST Error Code)

BIOS Messages and Codes

Table 7-2 lists messages that are from the baseline Intel BIOS and are present in the Cisco version of the BIOS.

Table 7-2   List of BIOS messages and codes

Error Code	Severity	Error Message	Possible Needed Response
9687	Fatal	DXE core component encountered a illegal software state error.	Replace faulty part and restart.
8565	Major	DIMM_C2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_C2.
8567	Major	DIMM_D2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_D2.
85A2	Major	DIMM_B1 uncorrectable ECC error encountered.	Replace DIMM_B1.
85AB	Major	DIMM_F2 uncorrectable ECC error encountered.	Replace DIMM_F2.
9000	Major	Unspecified processor component has encountered a non-specific error.	Restart. If failure, replace.
0xB6A3	Major	DXE boot services driver unrecognized.	Restart. If failure, replace.
8604	Minor	Chipset reclaim of noncritical variables complete.	Restart. If failure, replace.
9223	Minor	Keyboard component was not detected.	Restart. If failure, replace.
9266	Minor	Local console component encountered a controller error.	Restart. If failure, replace.

Table 7-2   List of BIOS messages and codes (continued)

Error Code	Severity	Error Message	Possible Needed Response
9286	Minor	Remote console component encountered a controller error.	Restart. If failure, replace.
94C6	Minor	LPC component encountered a controller error.	Restart. If failure, replace.
95A7	Minor	PCI component encountered a read error.	Restart. If failure, replace.
9609	Minor	Unspecified software component encountered a start error.	Restart. If failure, replace.
0xA028	Minor	Processor component encountered a high-voltage error.	Restart. If failure, replace.
0xA501	Minor	ATA/ATPI ATA SMART is disabled.	Enable.
0192	Fatal	Processor 0x cache size mismatch detected.	Replace faulty part and restart.
0194	Fatal	Processor 0x family mismatch detected.	Replace faulty part and restart.
0196	Fatal	Processor 0x model mismatch.	Replace faulty part and restart.
0197	Fatal	Processor 0x speeds mismatched.	Replace faulty part and restart.
0198	Fatal	Processor 0x family is not supported.	Replace faulty part and restart.
9667	Fatal	PEI module component encountered an illegal software state error.	Replace faulty part and restart.
96A7	Fatal	DXE boot services driver component encountered an illegal software state error.	Replace faulty part and restart.
96E7	Fatal	SMM driver component encountered an illegal software state error.	Replace faulty part and restart.
0xA421	Fatal	PCI component encountered a SERR error.	Replace faulty part and restart.
0xA5A1	Fatal	PCI Express component encountered a SERR error.	Replace faulty part and restart.
0012	Major	CMOS date / time not set.	Set the time and date.
0048	Major	Password check failed.	Verify user password. Restart. If failure, apply admin password. Replace if necessary.
0113	Major	Fixed media SAS RAID firmware cannot run properly.	Reflash firmware. Restart. If failure, replace.
0140	Major	PCI component encountered a PERR error.	Restart. If failure, replace.
0141	Major	PCI resource conflict.	Restart. If failure, replace.
0146	Major	PCI out of resources error.	Review resource allocation. Remove unneeded resources. Restart. If failure, replace.
0195	Major	Processor 0x Intel QPI speed mismatch.	Restart. If failure, replace.
019F	Major	Processor and chipset stepping configuration is unsupported.	Restart. If failure, replace.
5220	Major	CMOS/NVRAM configuration cleared	Reset configurations. Restart. If failure, replace.

Table 7-2   List of BIOS messages and codes (continued)

Error Code	Severity	Error Message	Possible Needed Response
5221	Major	Passwords cleared by jumper.	Reset passwords. Restart. If failure, replace.
5224	Major	Password clear jumper is set.	Restart. If failure, replace.
8160	Major	Processor 01 unable to apply microcode update.	Restart. If failure, replace.
8161	Major	Processor 02 unable to apply microcode update.	Restart. If failure, replace.
8190	Major	Watchdog timer failed on last boot.	Restart. If failure, replace.
8198	Major	OS boot watchdog timer failure.	Reset timer. If failure, replace.
8300	Major	Baseboard management controller failed self test.	Restart. If failure, replace.
84F2	Major	Baseboard management controller failed to respond.	Restart. If failure, replace.
84F3	Major	Baseboard management controller in update mode.	Complete update, then restart.
84F4	Major	Sensor data record empty.	Review files. If none, restart.
8500	Major	Memory component could not be configured in the selected RAS mode.	Restart. If failure, replace.
8501	Major	DIMM population error.	Restart. If failure, replace.
8502	Major	CLTT configuration failure error.	Restart. If failure, replace.
8520	Major	DIMM_A1 failed self test (BIST).	Replace DIMM_A1.
8521	Major	DIMM_A2 failed self test (BIST).	Replace DIMM_A2.
8522	Major	DIMM_B1 failed self test (BIST).	Replace DIMM_B1.
8523	Major	DIMM_B2 failed self test (BIST).	Replace DIMM_B2.
8524	Major	DIMM_C1 failed self test (BIST).	Replace DIMM_C1.
8525	Major	DIMM_C2 failed self test (BIST).	Replace DIMM_C2.
8526	Major	DIMM_D1 failed self test (BIST).	Replace DIMM_D1.
8527	Major	DIMM_D2 failed self test (BIST).	Replace DIMM_D2.
8528	Major	DIMM_E1 failed self test (BIST).	Replace DIMM_E1
8562	Major	DIMM_B1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_B1
8563	Major	DIMM_B2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_B2.
8564	Major	DIMM_C1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_C1.
8566	Major	DIMM_D1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_D1.
8568	Major	DIMM_E1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_E1.
8569	Major	DIMM_E2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_E2.

Table 7-2   List of BIOS messages and codes (continued)

Error Code	Severity	Error Message	Possible Needed Response
856A	Major	DIMM_F1 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_F1.
856B	Major	DIMM_F2 component encountered a Serial Presence Detection (SPD) fail error.	Replace DIMM_F2.
85A0	Major	DIMM_A1 uncorrectable ECC error encountered.	Replace DIMM_A1.
85A1	Major	DIMM_A2 uncorrectable ECC error encountered.	Replace DIMM_A2.
85A3	Major	DIMM_B2 uncorrectable ECC error encountered.	Replace DIMM_B2.
85A4	Major	DIMM_C1 uncorrectable ECC error encountered.	Replace DIMM_C1.
85A5	Major	DIMM_C2 uncorrectable ECC error encountered.	Replace DIMM_C2.
85A6	Major	DIMM_D1 uncorrectable ECC error encountered.	Replace DIMM_D1.
85A7	Major	DIMM_D2 uncorrectable ECC error encountered.	Replace DIMM_D2.
85A8	Major	DIMM_E1 uncorrectable ECC error encountered.	Replace DIMM_E1.
85A9	Major	DIMM_E2 uncorrectable ECC error encountered.	Replace DIMM_E2.
85AA	Major	DIMM_F1 uncorrectable ECC error encountered.	Replace DIMM_F1.
92A3	Major	Serial port component was not detected.	Restart if component exists. If failure, replace. If no component, add.
92A9	Major	Serial port component encountered a resource conflict error.	Restart. If failure, replace.
94C9	Major	LPC component encountered a resource conflict error.	Restart. If failure, replace.
0xA022	Major	Processor component encountered a mismatch error.	Restart. If failure, replace.
0xA5A4	Major	PCI Express IBIST error.	Restart. If failure, replace.
0108	Minor	Keyboard component encountered a locked error.	Unlock the keyboard.
0109	Minor	Keyboard component encountered a stuck key error.	Restart. If failure, replace.
0193	Minor	Processor 0x stepping mismatch.	Restart. If failure, replace.
8180	Minor	Processor 0x microcode update not found.	Restart. If failure, replace.
84FF	Minor	System event log full.	Export event log and delete files.
9226	Minor	Keyboard component encountered a controller error.	Restart. If failure, replace.
9243	Minor	Mouse component was not detected.	Restart.
9246	Minor	Mouse component encountered a controller error.	Restart.
9268	Minor	Local uonsole component encountered an output error.	Restart.
9269	Minor	Local uonsole component encountered a resource conflict error.	Restart.
9287	Minor	Remote uonsole component encountered an input error.	Restart.

Cisco UCS Faults and Error Messages Reference

Table 7-2 **List of BIOS messages and codes (continued)**

Error Code	Severity	Error Message	Possible Needed Response
9288	Minor	Remote uonsole component encountered an output error.	Restart.
92C6	Minor	Serial port controller error.	Restart. If failure, replace.
92C7	Minor	Serial port component encountered an input error.	Restart. If failure, replace.
92C8	Minor	Serial port component encountered an output error.	Restart. If failure, replace.
9506	Minor	ATA/ATPI component encountered a controller error.	Restart. If failure, replace.
95A6	Minor	PCI component encountered a controller error.	Restart. If failure, replace.
95A8	Minor	PCI component encountered a write error.	Restart. If failure, replace.
9641	Minor	PEI Core component encountered a load error.	Restart. If failure, replace.
96AB	Minor	DXE boot services driver component encountered invalid configuration.	Restart. If failure, replace.
0xA000	Minor	TPM device not detected.	Add TPM device, otherwise replace.
0xA001	Minor	TPM device missing or not responding.	Add TPM device if needed, otherwise replace.
0xA002	Minor	TPM device failure.	Replace TMP device.
0xA003	Minor	TPM device failed self test.	Replace TPM device.
0xA027	Minor	Processor component encountered a low-voltage error.	Proceed but monitor. If other errors appear, replace.
0xA500	Minor	ATA/ATPI ATA bus SMART not supported.	Add, then restart. If fails again, replace.
0xA5A0	Minor	PCI Express component encountered a PERR error.	Restart. If fails again, replace.
0xA6A0	Minor	DXE boot services driver Not enough memory available to shadow a legacy option ROM.	Proceed if shadow memory is not required. Otherwise, remove unnecessary options to free memory.

Cisco BIOS Messages and Codes

Table 7-3 describes additional messages unique to the Cisco BIOS.

Table 7-3 **Additional messages unique to Cisco BIOS.**

Code	Severity	Message	Added/Changed	Action
E000	Major	Memory RAS mirror fail.	Added.	Replace failed DIMMs.
E001	Major	Memory RAS spare fail.	Added.	Replace failed DIMMs.
E00A	Major	Memory BMC SPD read fail.	Added.	Replace failed DIMMs.
E1xx	Major	DIMM xx disabled.	Changed from 854x.	Replace any failed DIMMs and verify DIMMs in valid configuration

Code	Severity	Message	Added/Changed	Action
E2xx	Major	DIMM xx component encountered a Serial Presence Detection (SPD) fail error.	Changed from 856x.	Replace failed DIMM.
E3xx	Major	DIMM xx encountered a mismatch error.	Added.	Replace mismatched DIMM.
E4xx	Major	DIMM xx failed self test (BIST).	Changed from 852x.	Replace failed DIMM.
E500	Major	Memory-other DIMM failed.	Added.	Replace failed DIMM.
E600	Major	Memory-invalid population.	Added.	Replace failed DIMM.
E700	Major	Memory-mismatch population.	Added.	Replace failed DIMM.
E800	Major	Memory-SPD error.	Added.	Replace failed DIMM.
E900	Major	Memory-platform specific.	Added.	Replace failed DIMM.
D000	Fatal (blade will not boot)	Unsupported SPI flash.	Added.	Blade manufactured with wrong SPI flash part. Return materials authorization (RMA) the blade.

Baseboard Management Controller Messages

The Baseboard Management Controller (BMC) provides the interface to the System Event Log (SEL). The SEL can be accessed from the system side as well as from other external interfaces. The BMC uses a message handler to route messages between the different interfaces. It also monitors and manages the system board, including temperatures and voltages.

The following sections are included:

SEL Device

The SEL is a nonvolatile repository for system events. The SEL device is separate from the event receiver device and accepts commands to manage the contents.

This section includes the following topics:

SEL Event Record Format

The SEL messages are logged as a 16 byte string that contains the information about the change that triggered the message.

- Byte 1 and 2 is the record ID.
- Byte 3 is the record type.
- Bytes 4, 5, 6, and 7 is the timestamp
- Bytes 8 and 9 is the generator ID.
- Byte 10 is the version of the event message format.
- Byte 11 is the sensor type.
- Byte 12 is the sensor number.

- Byte 13 is either the event dir (assertion/deassertion event) or the event type.
- Byte 14, 15, and 16 are links to the event data field contents and determines whether the sensor class is about threshold, discrete, or original equipment manufacturer (OEM) settings.

Sensor Initialization Agent

The Sensor Initialization Agent is not a logical device, but a collection of functions and services specific to handling SDR information. The Sensor Initialization Agent works directly with the content of SDRs, in particular, with the sensor data records and the device locator records.

The agent uses the SDR information for sensor and IPMB device initialization during system startup. The agent interprets sensor data records and is directed by the *init required* fields to load thresholds to sensors that have the *threshold initialization required* bit set in the SDR records. Other bits in the record direct the agent to enable sensors and devices that come up with sensors, events, or both disabled.

The agent function runs at system power-up and at any system hard resets. We recommend that you run the agent function when the BMC first receives standby power.

In systems that implement power management, the system management software takes additional steps to restore intermediate settings after the system has powered up.

Sensor Data Record Device

The Sensor Data Record (SDR) device provides the interface to the sensor data records. A set of commands store and retrieve sensor data records. The SDR device provides a set of commands for discovering, configuring, and accessing sensors.

This section includes the following topics:

- SDR Repository Interface, page 8-2
- Modal and Nonmodal SDR Repositories, page 8-2

SDR Repository Interface

The SDR repository holds sensor, device locator, and entity association records for all sensors in the platform management subsystem. The BMC provides this interface to the SDR repository. The sensor data records can be accessed by using SDR commands.

Modal and Nonmodal SDR Repositories

There are two SDR repository implementations: modal and nonmodal.

A modal SDR repository is only updated when the controller is in SDR repository update mode. SDR information is kept in nonvolatile storage devices. Lengthy write operations during update can be required, which can interfere with other controller operations. For example, the SDR repository can be stored in a flash device that also holds a portion of the management controller code. A modal SDR repository implementation allows the functions associated with that code to be temporarily unavailable during the update process.

A nonmodal SDR repository can be written to at any time. Writing to the SDR does not impact the operation of other commands in the management controller.

Event Receiver Device

Event messages are special messages sent to management controllers when they detect significant or critical system management events. This includes messages for events such as temperature threshold exceeded, voltage threshold exceeded, power fault, and so on. The device generating an event message notifies the system by sending the message to the event receiver device.

Messages from the event receiver device are directly written into the system event log. The appropriate **Add SEL Entry** command is sent directly to the SEL device.

BMC Commands

SEL, SDR, and event commands are designed so that the devices that implement those command sets are isolated from the contents of the message. The devices do not interpret the messages. The event receiver device receives and routes event messages. The SEL devices retrieve and store log entries. The SDR devices retrieve and store sensor data records.

This section includes the following topics:

SEL Device Commands

These are the available SEL device commands:

Get SEL Info

This command returns the number of entries in the SEL, the SEL command version, and the timestamp for the most recent entry and delete or clear.

Get SEL Allocation Info

This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 16 byte record is to be added, and the SEL has a 32 byte allocation unit size, the record takes up 32 bytes of storage.

Reserve SEL

This command sets the present owner of the SEL, as identified by the software ID or by the requester slave address from the command. The reservation process provides a limited amount of protection at repository access from the Intelligent Platform Management Interface (IPMB) when records are being deleted or incrementally read.

Get SEL Entry

This command retrieves entries from the SEL. The record data field in the response returns the 16 bytes of data from the SEL event record.

Add SEL Entry

This command enables the BIOS to add records to the system event log. Normally, the SEL device and the event receiver service are incorporated into the same management controller. In this case, BIOS or the system SMI handler adds its own events to the SEL by formatting an event message and sending it to the SEL device rather than by using this command.

Partial Add SEL Entry

This command is a version of the **Add SEL Entry** command. It allows the record to be incrementally added to the SEL. This command must be preceded by a **Reserve SEL** command. The first partial add must be to offset 0000h, and subsequent partial adds must be done sequentially, with no gaps or overlap between the adds.

Delete SEL Entry

This command deletes the specified entry in the SEL.

Clear SEL

This command erases the SEL contents. This process can take several seconds, based on the type of storage device. The command also shows the status of the erasure.

Get SEL Time

This command returns the time from the SEL device,which uses it for event timestamps.

Send document comments to ucs-docfeedback@cisco.com

Set SEL Time

This command initializes the time setting in the SEL device, which uses it for event timestamps.

Get Auxiliary Log Status

This command allows remote software to know whether new information has been added to machine check architecture (MCA) log. The MCA log is a storage area that can be implemented in Intel Itanium-based computer systems and holds information from an MCA handler running from system firmware.

Set Auxiliary Log Status

This command can be used by system software or firmware to set the status returned by the **Get Auxiliary Log Status** command. Some implementations mght use a private mechanism to set this status, in which case this command can not be provided even if the **Get Auxiliary Log Status** command is provided.

SDR Repository Device Commands

The following commands control the SDR repository device actions:

- Get SDR Repository Info, page 8-5
- Get SDR Repository Allocation Info, page 8-6
- Reserve SDR Repository, page 8-6
- Get SDR, page 8-6
- Add SDR, page 8-6
- Partial Add SDR, page 8-6
- Delete SDR, page 8-6
- Clear SDR Repository, page 8-6
- Get SDR Repository Time, page 8-7
- Set SDR Repository Time, page 8-7
- Enter SDR Repository Update Mode, page 8-7
- Exit SDR Repository Update Mode, page 8-7
- Run Initialization Agent, page 8-7

Get SDR Repository Info

This command returns the SDR command version for the SDR repository. It also returns a timestamp for the last add, delete, or clear commands.

Get SDR Repository Allocation Info

This command returns the number of possible allocation units, the amount of usable free space (in allocation units), the allocation unit size (in bytes), and the size of the largest contiguous free region (in allocation units). The allocation unit size is the number of bytes in which storage is allocated. For example, if a 20 byte record is to be added, and the SDR repository has a 16 byte allocation unit size, then the record would take up 32 bytes of storage.

Reserve SDR Repository

This command sets the present owner of the repository, as identified by the software ID or the requester slave address from the command. The reservation process provides a limited amount of protection on repository access from the IPMB when records are being deleted or incrementally read.

Get SDR

This command returns the sensor record specified by the record ID. The command also accepts a byte range specification that allows a selected portion of the record to be retrieved (incremental read). The **Reserve SDR Repository** command must be issued first for an incremental read to an offset other than 0000h. (The **Get SDR Repository Info** command should be used to verify the version of the SDR repository before sending other SDR repository commands. The command format and operation could change between versions.)

Add SDR

This command adds the specified sensor record to the SDR repository and returns its record ID. The data passed in the request must contain all of the SDR data.

Partial Add SDR

This command is a version of the **Add SDR** command that allows the record to be incrementally added to the repository. This command must be preceded by a **Reserve SDR Repository** command. The first partial add must be to offset 0000h, and partial adds must be done sequentially, with no gaps or overlap between the adds.

Delete SDR

This command deletes the sensor record specified by record ID. The requester ID and the reservation ID must also match the owner of the SDR repository.

Clear SDR Repository

This command clears all records from the SDR repository and reinitializes the SDR repository subsystem. The requestor ID and reservation ID information must match the present owner of the SDR repository. We recommend that this command not be used within your utilities and system management software.

Get SDR Repository Time

This command returns the time setting from the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.

Set SDR Repository Time

This command initializes the time setting in the SDR repository device, which the SDR repository devices uses for tracking when changes to the SDR repository are made.

Enter SDR Repository Update Mode

This command enters a mode that allows a subset of normal commands. Available commands are **Get Device ID**, **Get SDR**, **Add SDR**, **Partial Add SDR** and **Clear SDR Repository**.

Exit SDR Repository Update Mode

This command exits the SDR repository update mode and restores normal use of all commands.

Run Initialization Agent

This command runs the initialization agent and can also check the status of the agent.

Event Receiver Commands

The following commands can be executed on the event receiver device:

- Set Event Receiver, page 8-7
- Get Event Receiver, page 8-7
- Platform Event Message, page 8-7

Set Event Receiver

This is a global command to tell a controller where to send event messages. The slave address and LUN of the event receiver must be provided. A value FFh for the event receiver slave address disables the generation of event messages.

Get Event Receiver

This is a global command to retrieve the present setting for the event receiver slave address and LUN.

Platform Event Message

This command is a request for the BMC to process event data that the command contains. The data is logged to the SEL.

SEL Record Examples

Examples that are reported to the SEL Repository are provided here. The raw record contains 16 bytes and are dislayed in the examples as hexadecimal values. Following the arrow is the translation of the data. The |-pipes are separators for ease of reading the translation.

The following topics are included:

Device Presence Changes

These are examples of presence assertions. This shows a boot-up process.

Cisco UCS Manager Error Messages

Cisco UCS Error Messages

This chapter contains a list of error messages that you may see in a Cisco UCS instance. This chapter contains the following sections:

Overview

Cisco UCS error messages typically display in Cisco UCS Manager GUI and Cisco UCS Manager CLI.

These error messages are specific to the action that a user is performing or the object that a user is configuring or administering. These messages can be the following:

- Informational messages, providing assistance and tips about the action being performed
- Warning messages, providing information about system errors related to an object, such as a user account or service profile, that the user is configuring or administering
- FSM status messages, providing information about the status of an FSM stage

Many error messages contain one or more variables. What information that Cisco UCS Manager uses to replace these variables depends upon the context in which you see the message. Some messages can be generated by more than one type of error.

Information and Warning Messages

Failed to get the current time.

An snprintf process failed.

Create-only and naming properties cannot be modified after creation (class=%s, property=%s).

Cannot execute SAM pin command (exit code %d).

Cannot execute SAM unpin command (exit code %d).

Failed to execute reload all command (exit code %d).

A lower privilege user cannot delete a session of higher privilege user.

Provider order numbers must be unique.

Failed to get aaa:RadiusEp object.

Failed to get aaa:AuthRealm object.

RADIUS providers cannot be deleted while authentication realm is set to use RADIUS.

The order of RADIUS providers cannot be changed while authentication realm is set to use RADIUS.

The system does not allow more than %d providers.

TACACS providers cannot be deleted while authentication is set to use TACACS.

The order of TACACS providers cannot be changed while authentication realm is set to use TACACS.

Failed to get aaa:LdapEpMo object.

LDAP providers cannot be deleted while authentication is set to use LDAP.

The order of LDAP providers cannot be changed while authentication realm is set to use LDAP.

Failed to get aaa:Ep object.

Duplicate user MO.

User %s was not found.

Failed to cast to UserMo, user %s.

Failed to create UserLoginMo, user %s.

Failed to get shadow password entry.

Failed to get aaa::Realm object.

Failed to get aaa::UserEp object.

The SSH key format is invalid.

Expiration date must be set to expire the user account.

Failed to convert date into internal format.

Valid year value is between 1970 and 2037.

User account expiration can be set only for future.

Cannot delete locale '%s' with a reference in user account '%s'.

System does not allow more than %d locales.

Failed to cast to AAA organization MO.

Referred Organization MO does not exist.

Cannot delete role '%s' with a reference in user account '%s'.

System does not allow more than %d roles.

Role name '%s' is a reserved word.

'%s' role should have at least one privilege.

System does not allow more than %d total privileges across all roles.

Role %s cannot be deleted from user %s.

Role %s was not found.

locale %s was not found.

User %s cannot delete itself.

System does not allow more than %d users.

User name '%s' is a reserved word.

%s account cannot be modified by a lower privileged account.

System does not allow deleting %s account.

%s account does not expire.

System does not allow modifying roles for %s account.

System does not allow modifying locales for %s account.

'%s' role cannot be deleted.

'%s' role cannot be modified, priv %d.

User %s's privileges (admin, aaa, fault or operations) and locale assignment are incompatible.

User %s's privileges and locale assignment are incompatible.

Admin privilege can be assigned to a user only by another user with admin privilege.

A contact must be specified.

%s email address must be specified.

%s email address must contain an '@'

%s email address must contain name before '@'

%s email address must contain hostname after '@'

%s email address must contain only one '@'.

Must specify a contact phone number.

The contact phone number must be in international format (e.g., +1-800-123-4567).

A contact address must be specified.

An SMTP server address must be specified.

Number of Call Home profiles must not exceed %d.

Cannot delete default profiles.

The format of a full-text profile must be full-text.

The format of short-text profile must be short-text.

The format of the Cisco TAC profile must be XML.

Only Cisco TAC alert is allowed with built-in Cisco TAC profile.

Cannot obtain callhome::SourceMo!

Cannot find callhome::SmtpMo!

Cannot cast to callhome::EpMo!

%s

%d

%d

The chassis decommission is in progress; wait for it to complete.

Cannot mark %s out of service.

Port %s is already allocated to %s.

Slot identity is being established. Try again later.

The number of VSANs on a fabric interconnect cannot exceed %d.

SwitchId property needs to be set to the ID of corresponding fabric interconnect domain, MO id:%u, required id:%u.

Explicit deletion of FC Port VSAN object is prohibited; create under a different VSAN.

The default VSAN object was not found.

The default cannot be deleted.

Configuration for FC Port %u/%u does not exist for fabric interconnect %s.

VSAN %u (of network %s) and %u (of network %s) - both cannot share the FCoE VLAN %u.

Networks %s and %s - both cannot share same VSAN id (%u) with different FCoE VLAN ids (%u and %u respectively).

Logical Server EP managed object is NULL.

Only one VSAN per port supported.

Number of VLANs on a fabric interconnect cannot exceed %d.

Port-Channel %u contains %u ports, maximum allowed is %u.

Number of port-channels defined: %u, maximum allowed is %u.

VNET %d is already configured as inband management VNET.

Internal error: 1G speed is invalid for the port %u/%u.

Internal error: cannot create fabric interconnect configuration %u/%u MO.

Internal error: cannot create fabric interconnect configuration port-channel %u MO.

Default VLAN cannot be deleted.

Circuit can be reset only on virtualized adapters.

ClusterState request failed, state not initialized.

Motherboard of blade %s was not found.

Motherboard of blade %d/%d was not found.

Blade %s.

No adaptor %s in blade %s.

Motherboard of blade %s.

Blade %s was not found.

Cannot find blade %d/%d.

Empty FRU information; cannot create Chassis/IOM objects.

Fabric interconnect:%u slot:%u port:%u not a serverport.

Fabric interconnect:%u slot:%u port:%u is not operationally up.

No chassis ID is available.

No fabric interconnect %d.

```
FE OFFLINE: Cannot find chassis %d.

FE FW UPGRADE: Cannot find chassis %d.

Default VSAN object not found.

Chassis %d was not found.

Server %d/%d was not found.

Server facing FE port %d/%d/%d was not found.

Cannot find chassis %d.

Profile '%s' is currently used by some Virtual Machines; cannot delete.

Not able to find sysdebug::CoreFileRepositoryMo.

Failed to generate key ring.

GenerateKey failed.

Failed to generate self signed certificate.

Failed to verify certificate with private key.

Failed to store certificate.

Failed to read certificate file.

Failed to open certificate file.

Failed to generate certificate signing request.

GetCsrFilename Error.

Failed to setReq for certificate signing request.

GenerateCSR failed.

Failed to set key ring for HTTPS service.

Key ring exists, modulus cannot be changed after creation.

Verify certificate error: %s.

Modulus must be set before creating certificate request for key ring %s.

Incorrect MO access.

System does not allow more than %d key rings.

Cannot delete a key ring %s that is in use.

Trustpoint cannot be set for default key ring.

Trustpoint must be set before adding a certificate for key ring %s.

Trustpoint %s does not exist setfor key ring %s.

Failed to verify certificate chain, error: %s.
```

Failed to get fingerprint(s).

You cannot delete a trustpoint that is in use.

Failed to get PKI:Ep object.

Cannot cast to sysdebug::LogControlEpMo

Failed to get PKI Ep MO.

Key ring %s does not exist.

Key ring %s certificate is not set.

Invalid WS-Management MO.

Invalid HTTPS/HTTP MO.

Port is in use or it is a reserved port.

Failed to set HTTP port.

Failed to set HTTPS port.

A hostname must be specified to configure external an Syslog server.

The system does not allow more than %d SNMP users.

A system user exists with the same name; choose a different name for the SNMP user.

The privacy password must be a minimum of %d characters.

Privacy password strength check: %s.

The privacy password must be set before enabling AES use.

Only one instance of SNMP MO can exist.

All strings must be specified to configure SNMP service.

SNMP MO is missing.

The system cannot create more than %d SNMP trap hosts.

A community string must be set to configure an SNMP trap host.

Only one instance of DNS MO can exist.

Failed in retrieving DNS MO.

DNS MO is missing.

System does not allow more than %d DNS providers.

Only one instance of DateTime MO can exist.

Failed in retrieving DateTime MO.

Invalid timezone.

DateTime MO is missing.

System does not allow more than %d NTP providers.

Failed to get comm::SvcEp object.

Failed to restart HTTP server.

Configured object (%s) not found.

Server "%s" is unresolvable.

Failed to instantiate template "%s" to org "%s" server "%s"

Failed to clone "%s" to org "%s" server "%s"

A DVS named '%s' already exists under given vCenter.

A DVS named '%s' is under process of deletion, wait until deletion completes.

vCenter '%s' and '%s' cannot have same host '%s'

Deletion of vCenter '%s' with same host '%s' in in progress, wait until it gets
deleted.

Internal error: Singleton managing external VM management not found.

Internal error: Extension key not found.

Internal error: Extension key not set.

Resource allocation error: Cannot claim any extension key resource for this DVS.

Internal error: Unable to create deletion task for DVS %s.

Maximum ports per DVS cannot exceed %u; you must reduce max-ports property of port-profiles.

Only one certificate is allowed at this point.

Certificate file name must not be empty.

Invalid certificate file location.

Cannot change extension key while there are pending DVS deletions.

Cannot change extension key while in use.

Storage controller %d/%d was not found.

Chassis %d: fan module %d was not found.

No fabric extender in chassis %d slot %d.

No blade was found in chassis %d slot %d.

Unknown type %d.

No adaptor %u was found in blade %u chassis %u.

Chassis %d: fan module %d: fan %d was not found.

No CMC in chassis %d slot %d.

Failed to assign VIF ID.

Fabric interconnect port '%s' was not found.

MUX server port was not found.

Blade %d/%d was not found or is out of service.

An IP address, netmask, and gateway must be configured for out-of-band configuration.

A virtual network, IP address, netmask, and gateway must be configured for inband configuration.

A virtual IP address must be configured for virtual IP configuration.

Chassis was marked for decommission, decommission is in progress.

Org '%s' cannot be deleted.

Org '%s' cannot be deleted. No locale access.

Root level org cannot be created.

FC COS cannot be applied to the vNIC.

Only FC COS can be applied to the vHBA.

Root org was not found.

Only Ethernet best-effort class can match against 'any' COS value.

Two classes cannot have the same COS value (%d).

Only one class can have a no-drop policy.

Only one class can have a multicast-optimize policy.

Only one class can have a strict bandwidth priority policy.

At least one (enabled) class should have non-zero weight.

Unable to find Peer fabric interconnect object.

Unable to find Management Controller object for peer network element.

Unable to find Management Interface object for peer network element.

Cannot assign the same IP address for both fabric interconnects.

The netmask for both fabric interconnects must be the same.

Out-of-band IP address and virtual IP address must be different.

Adaptor unit [%s] is not contained by BladeMo parent.

Blade server [%s] is not contained by ChassisMo parent.

Network "%s" does not exist.

Invalid vHBA name; the provided name is reserved for FC node.

Dynamic vNIC [%s] cannot be modified.

Invalid prefix of profile name.

Maximum number of port-profiles cannot exceed %u.

Address %s is already assigned to %s.

Pooled address is unknown.

Bad address block range definition collision.

Block definition is too large. Size cannot exceed %u.

Bad address block range definition.

Address is already assigned to %s.

Inconsistent pool definition - the IP address and default gateway must be in same network.

Bad address block range - not in the management subnet.

Block cannot span multiple octets.

Cannot resolve %s: class "%s" empty prefix.

Cannot resolve %s: class "%s" RN has no components.
